KONICA MINOLTA BUSINESS TECHNOLOGIES, INC.

Table of Contents

Revision list.....	1
bizhub PRESS 1250/1250P/1052/PRO 951 Version 1.0.....	1
A SAFETY AND IMPORTANT WARNING ITEMS.....	A-1
1. IMPORTANT NOTICE.....	A-2
2. DESCRIPTION ITEMS FOR DANGER, WARNING AND CAUTION.....	A-3
2.1 Description items in this Service Manual.....	A-3
2.2 Description items for safety and important warning items.....	A-3
3. SAFETY WARNINGS.....	A-4
3.1 MODIFICATIONS NOT AUTHORIZED BY KONICA MINOLTA BUSINESS TECHNOLOGIES, INC.....	A-4
3.1.1 Actions requiring special attention.....	A-4
3.2 POWER PLUG SELECTION.....	A-5
3.2.1 Power Cord Set or Power Plug.....	A-5
3.3 CHECKPOINTS WHEN PERFORMING ON-SITE SERVICE.....	A-6
3.3.1 Power Supply.....	A-7
3.3.2 Installation Requirements.....	A-11
3.3.3 After Service.....	A-13
3.4 FUSE.....	A-18
3.5 Used Batteries Precautions.....	A-19
3.5.1 ALL Areas.....	A-19
3.5.2 Germany.....	A-19
3.5.3 France.....	A-19
3.5.4 Denmark.....	A-19
3.5.5 Finland, Sweden.....	A-19
3.5.6 Norway.....	A-19
4. WARNING INDICATIONS ON THE MACHINE.....	A-20
4.1 Warning indications inside the machine.....	A-20
4.2 Warning indications on the boards.....	A-28
5. MEASURES TO TAKE IN CASE OF AN ACCIDENT.....	A-31
B NOTATION OF THE CONTENTS	B -1
1. PRECAUTION ON HANDLING THIS MANUAL	B -1
2. PRODUCT NAME	B -2
3. TRADEMARK	B -3
3.1 TRADEMARKS OF OTHER COMPANIES	B -3
3.2 OWN TRADEMARKS	B -3
4. ELECTRICAL PARTS AND SIGNALS.....	B -4
5. PAPER FEED DIRECTION	B -6
C PRODUCT SPECIFICATIONS.....	C-1
1. bizhub PRESS 1250/1250P/1052.....	C-1
1.1 Type.....	C-1
1.2 Functions.....	C-1
1.3 Paper Type.....	C-2
1.4 Recommended paper.....	C-2
1.4.1 Inch.....	C-2

12.5	Machine data.....	C-21
12.6	Operating environment.....	C-21
12.7	Note regarding the specifications	C-21

13. RU-509	C-22
13.1 Type	C-22
13.2 Functions	C-22
13.3 Type of paper	C-22
13.4 Machine data	C-22
13.5 Operating environment	C-22
13.6 Note regarding the specifications	C-22
14. HM-102	C-23
14.1 Type	C-23
14.2 Functions	C-23
14.3 Type of paper	C-23
14.4 Machine data	C-23
14.5 Operating environment	C-23
14.6 Note regarding the specifications	C-23
15. RU-510	C-24
15.1 Type	C-24
15.2 Functions	C-24
15.3 Paper type	C-24
15.4 Machine data	C-24
15.5 Operating environment	C-24
15.6 Note regarding the specifications	C-24
16. ZU-608	C-25
16.1 Type	C-25
16.2 Functions	C-25
16.3 Type of paper	C-26
16.4 Machine data	C-26
16.5 Operating environment	C-26
16.6 Note regarding the specifications	C-27
17. FS-532	C-28
17.1 Type	C-28
17.2 Functions	C-28
(1) Functions	C-28
(2) Staple sheet	C-28
(3) Staple position	C-28
(4) Maximum tray capacity	C-28
17.3 Type of paper	C-29
17.3.1 Allowable amount of curling	C-30
17.4 Machine data	C-30
17.5 Operating environment	C-30
17.6 Note regarding the specifications	C-30
18. SD-510	C-31
18.1 Type	C-31
18.2 Functions	C-31
(1) Functions	C-31
(2) Maximum tray capacity	C-31
18.3 Type of paper	C-31
(1) Saddle stitching mode	C-31
(2) Half-Fold mode	C-32
(3) Tri-folding mode	C-32
(4) Allowable amount of curling	C-33
18.4 Machine data	C-33
18.5 Operating environment	C-33
18.6 Note regarding the specifications	C-33
19. PK-522	C-34
19.1 Type	C-34
19.2 Functions	C-34
19.3 Type of paper	C-34
19.4 Machine data	C-34
19.5 Operating environment	C-34
19.6 Note regarding the specifications	C-34
20. PI-502	C-35
20.1 Type	C-35
20.2 Functions	C-35
20.3 Type of paper	C-35
20.4 Machine data	C-35
20.5 Operating environment	C-35
20.6 Note regarding the specifications	C-35

21. MK-732.....	C-36
21.1 Type.....	C-36
21.2 Type of paper.....	C-36
21.3 Machine data.....	C-36
21.4 Operating environment.....	C-36
21.5 Note regarding the specifications	C-36
22. LS-505.....	C-37
22.1 Type	C-37
22.2 Functions	C-37
(1) Function.....	C-37
(2) Maximum tray capacity	C-37
22.3 Type of paper	C-37
22.4 Machine data	C-38
22.5 Operating environment	C-38
22.6 Note regarding the specifications	C-38
23. FD-503.....	C-39
23.1 Type	C-39
23.2 Functions	C-39
(1) Function.....	C-39
(2) Maximum tray capacity	C-39
23.3 Type of paper	C-40
(1) Punching function	C-40
(2) Folding functions	C-40
(3) PI functions	C-40
23.4 Machine data	C-41
23.5 Operating environment	C-41
23.6 Note regarding the specifications	C-41
24. SD-506.....	C-42
24.1 Type	C-42
24.2 Functions	C-42
(1) Function.....	C-42
(2) Maximum tray capacity	C-42
24.3 Type of paper	C-42
(1) Straight/sub tray mode	C-42
(2) Saddle stitching mode	C-42
(3) Trimming mode	C-44
(4) Multi-center folding mode	C-44
(5) Overlap tri-folding mode	C-45
24.4 Machine data	C-45
24.5 Operating environment	C-45
24.6 Note regarding the specifications	C-45
25. PB-503.....	C-46
25.1 Type	C-46
25.2 Functions	C-46
(1) Function.....	C-46
(2) Binding sheets	C-46
(3) Maximum tray capacity	C-46
(4) Others	C-46
25.3 Type of paper	C-46
(1) Paper size	C-46
(2) Paper weight	C-47
(3) Applicable paper in each mode	C-47
25.4 Machine data	C-49
25.5 Operating environment	C-49
25.6 Note regarding the specifications	C-49
26. IC Unit.....	C-50
26.1 Type.....	C-50
26.2 Functions.....	C-50
26.3 Machine data.....	C-50
26.4 Operating environment.....	C-50
26.5 Note regarding the specifications	C-50
27. GP-501.....	C-51
27.1 Type.....	C-51
27.2 Modes of Operation.....	C-51
27.3 Machine data.....	C-51
27.4 Software.....	C-51
27.5 Electronic.....	C-51
27.6 Inputs.....	C-51
(1) Media Input from Printer.....	C-51

(2) Power.....	C-52
27.7 Outputs.....	C-52
27.8 Performance.....	C-52
(1) Reliability.....	C-52
27.9 Operation Environment, Storage, Transport.....	C-52
27.10 Safety /Regulatory.....	C-52
(1) Safety Compliance.....	C-52
(2) Electromagnetic Compliance.....	C-52
27.11 Appendix A.....	C-53
27.12 Appendix B.....	C-53
27.13 Appendix C.....	C-54
27.14 Glossary of Terms.....	C-55
28. GP-502.....	C-56
28.1 Type.....	C-56
28.2 Functions.....	C-56
(1) Function	C-56
(2) Binding sheets	C-56
(3) Book stock quantity	C-56
(4) Others.....	C-56
28.3 Type of paper.....	C-56
(1) Paper size.....	C-56
(2) Paper weight.....	C-57
(3) Type of paper	C-57
(4) Recommended paper.....	C-57
28.4 Performance Specifications.....	C-58
(1) Input conditions.....	C-58
(2) Sticking specifications.....	C-58
(3) Book specifications.....	C-59
28.5 Materials.....	C-59
28.6 Machine data.....	C-60
28.7 Operating environment.....	C-60
28.8 Note regarding the specifications	C-60
D OVERALL COMPOSITION.....	D-1
1. SYSTEM CONFIGURATION.....	D-1
1.1 SYSTEM CONFIGURATION (1250/1250P/1052).....	D-1
1.2 Configuration for optional device (1250/1250P/1052).....	D-2
1.2.1 Coupling combination of the main body and the paper feed option.....	D-2
1.2.2 Coupling combination of the main body and the finisher option.....	D-2
1.3 System configuration (951).....	D-4
1.4 Configuration for optional device (951).....	D-5
1.4.1 Combination of the main body and the paper feed option.....	D-6
1.4.2 Combination of the main body and the finisher option.....	D-6
2. MAIN BODY UNIT CONFIGURATION.....	D-7
3. PAPER PATH.....	D-8
3.1 PAPER PATH.....	D-8
3.2 Paper exit path pattern.....	D-8
3.2.1 Outline of paper exit path pattern.....	D-8
3.2.2 Paper exit path pattern when RU-510 is installed.....	D-8
3.3 Paper exit process of RU-510 according to the difference of the finishing option and the weight.....	D-9
3.3.1 In case of 1250/1250P.....	D-10
3.3.2 In case of 1052.....	D-11
4. CONTROL BLOCK DIAGRAM.....	D-13
5. IMAGE CREATION PROCESS.....	D-14
5.1 Image creation flow and functions.....	D-14
5.2 Charging process (Step 1).....	D-14
5.3 LED exposure process (Step 2).....	D-15
5.4 Developing process (Step 3).....	D-15
5.5 Transfer process (Step 4).....	D-15
5.6 Separation process (Step 5).....	D-16
5.7 Toner neutralizing (Sub step 1).....	D-17
5.8 Drum cleaning (Sub step 2).....	D-17
5.9 Exposure before charging (Sub step 3).....	D-17
5.10 Transfer belt cleaning (Sub step 4).....	D-18
5.11 Toner collection (Sub step 5).....	D-18
6. IMAGE CREATION CONTROL.....	D-19
7. PROCESS SPEED.....	D-20
7.1 1250/1250P (at normal temperature).....	D-20

7.2 1052 (at normal temperature).....	D-20
7.3 PRO 951 (at normal temperature).....	D-21
E SERVICE TOOL.....	E-1

5.3	Photo conductor section.....	F-62
5.3.1	Removing/reinstalling the photo conductor section.....	F-62
5.3.2	Replacing the charger unit.....	F-63
5.3.3	Replacing the charger control plate.....	F-64
5.3.4	Replacing the charger wire/charger vibration proof rubber.....	F-65
5.3.5	Replacing the charger cleaning unit/C-clip.....	F-65
5.3.6	Cleaning the LPH lens.....	F-67
5.3.7	Replacing the drum temperature sensor.....	F-69
5.3.8	Replacing the drum/cleaning of the photo conductor section.....	F-69
5.3.9	Replacing the drum claw.....	F-70
5.3.10	Replacing the drum fixing spring and the drum positioning collar.....	F-72
5.4	Developing section.....	F-72
5.4.1	Replacing the suction filter.....	F-72
5.4.2	Replacing the developing suction seal /2 and /5, the suction pad /H, and the stopper pad /1 and /2.....	F-74
5.4.3	Cleaning of the developing unit.....	F-76
5.4.4	Replacing the developing unit.....	F-76
5.4.5	Replacing the developer.....	F-78
5.5	Toner supply/collection section.....	F-79
5.5.1	Replacing/cleaning of the toner bottle.....	F-79
5.5.2	Replacing the waste toner box.....	F-80
5.5.3	Replacing the agitator plate assembly.....	F-81
5.5.4	Replacing the intermediate hopper motor (M11).....	F-82
5.5.5	Replacing the toner supply sleeves /1 and /2.....	F-83
5.5.6	Replacing the toner bottle motor (M6) and the toner hopper motor (M7).....	F-87
5.5.7	Replacing the pump units /Lt and /Rt.....	F-88
5.5.8	Replacing the waste toner box swing motor (M19).....	F-89
5.5.9	Replacing the air separation motor (M10).....	F-91
5.6	Cleaning section.....	F-92
5.6.1	Removing/reinstalling the cleaning section.....	F-92
5.6.2	Replacing the drum scraper assy/ scatter preventive filter assy.....	F-92

5.6.3	Replacing the cleaning blade.....	F-93
5.6.4	Cleaning/replacing the toner seal board.....	F-95
5.6.5	Replacing the toner guide brush assy/scattering prevention felt/seal plates /Fr and /Rr.....	F-96
5.6.6	Replacing the guide plate assy.....	F-98
5.6.7	Replacing the discharge wire / PCC unit.....	F-100
5.6.8	Cleaning when removing the cleaning unit (when conducting maintenance work).....	F-102
5.7	Paper feed section.....	F-103
5.7.1	Removing/reinstalling the pick-up roller assembly/separation roller assembly.....	F-103
5.7.2	Replacing the pick-up roller/paper feed roller.....	F-106
5.7.3	Replacing the separation roller.....	F-108
5.7.4	Replacing the torque limiter /A and the cover.....	F-109
5.7.5	Removing/reinstalling the tray.....	F-110
5.7.6	Replacing the paper feed clutch/separation clutch.....	F-111
5.7.7	Replacement procedure of the parts at the separation section.....	F-112
5.8	Vertical conveyance section.....	F-114
5.8.1	Removing/reinstalling the vertical conveyance unit.....	F-114
5.8.2	Replacing the pre-registration clutch/vertical conveyance clutch.....	F-114
5.8.3	Replacing the pre-registration rollers /1 and /2, the pre-registration bearing, the conveyance rollers /2 and /3, and the torque limiter.....	F-115
5.8.4	Replacing the conveyance pulley and the conveyance belt /A.....	F-118
5.8.5	Replacing the conveyance roller /1 and the paper feed gear /B.....	F-119
5.8.6	Replacing the conveyance exit roller peripheral parts.....	F-120
5.8.7	Replacing the paper dust removing brush and the paper dust guide holder.....	F-124
5.8.8	Cleaning of the paper dust guide holder.....	F-125
5.9	DUPLEX SECTION.....	F-125
5.9.1	Pulling out/reinstalling the duplex section.....	F-125
5.9.2	Cleaning of the paper dust removing brush for the registration roller /Lw.....	F-126
5.9.3	Cleaning of the paper dust removing brush for the registration roller /Up.....	F-127
5.9.4	Cleaning of the registration sensor.....	F-127
5.9.5	Cleaning the paper stay sensor /1.....	F-128
5.9.6	Cleaning the paper stay sensor /2.....	F-128
5.9.7	Cleaning the ADU paper reverse sensors /2.....	F-129
5.9.8	Removing/reinstalling the transfer belt unit.....	F-129
5.9.9	Replacing the transfer belt, the transfer roller, the bearing /H and the transfer contact /Rr.....	F-130
5.9.10	Replacing the transfer contact /Fr.....	F-131
5.9.11	Removing/reinstalling the duplex section cover.....	F-133
5.9.12	Removing/reinstalling the registration section.....	F-133
5.9.13	Replacing the registration roller /Up, the registration bearing, the roller gear /Rt, the registration gears /Up and /Lw.....	F-134
5.9.14	Replacing of the paper lift sheet.....	F-136
5.9.15	Replacing the pre-transfer driven roller assy.....	F-137
5.9.16	Replacing the loop driven roller.....	F-138
5.9.17	Replacing the belt cleaning unit.....	F-138
5.9.18	Replacing the cleaning brush, the cleaning shaft, the regulation plate assy and the power supply parts.....	F-141
5.9.19	Replacing the registration motor (M17) and the motor gear /Rt.....	F-145
5.9.20	Replacing the loop motor (M18).....	F-146
5.9.21	Replacing the ADU exit roller.....	F-148
5.9.22	Replacing the ADU reverse motor (M12) and the ADU reverse motor belt.....	F-148
5.9.23	Replacing the ADU conveyance motor /2 (M16) and the ADU conveyance motor belt /2.....	F-151
5.9.24	Replacing the ADU conveyance roller /3 and /4.....	F-155
5.9.25	Replacing the reverse/exit roller and the reverse/exit motor belt.....	F-156
5.9.26	Replacing the ADU accelerate motor (M14) and the ADU accelerate motor belt.....	F-157
5.9.27	Replacing the ADU accelerate roller.....	F-158
5.9.28	Replacing the paper exit conveyance roller /1 and /2 assy and the ADU paper exit roller belt.....	F-159
5.9.29	Replacing the ADU reverse roller.....	F-161
5.9.30	Replacing the transfer belt motor (M30).....	F-162
5.9.31	Replacing the ADU conveyance motor /1 (M15) and the ADU conveyance motor belt /1.....	F-162
5.9.32	Replacing the ADU conveyance roller /1 and /2.....	F-163
5.9.33	Replacing the transfer belt pressure release motor (M26).....	F-165
5.9.34	Replacing the reverse/exit motor (M13).....	F-168
5.9.35	Replacing the reverse/exit solenoid (SD7) and the de-curler solenoid /Up (SD8) and /Lw (SD5).....	F-169
5.9.36	Removing/reinstalling the reverse/exit section.....	F-173
5.9.37	Replacing the reverse gate.....	F-174
5.9.38	Replacing the fusing exit roller and the coupling unit.....	F-175
5.9.39	Replacing the de-curler motor (M32).....	F-177
5.9.40	Replacing the de-curler entrance roller.....	F-177
5.9.41	Replacing the de-curler belt /Lw (1250/1250P/1052 only).....	F-178
5.9.42	Replacing the de-curler belt /Up.....	F-179
5.9.43	Replacing the guide member /Up and /Lw.....	F-181
5.10	Fusing section.....	F-183
5.10.1	Way to distinguish the fusing roller /Up between 1250/1250P/1052 and 951.....	F-183

5.10.2	Replacing the fusing cleaning web.....	F-184
5.10.3	Removing/reinstalling the fusing section.....	F-185
5.10.4	Opening/closing of the web section.....	F-185
5.10.5	Replacing the fusing heater lamps /1 (L1) and /2 (L2).....	F-186
5.10.6	Replacing the fusing roller /Up, the heat insulating sleeve, the fusing bearing /Up and the fusing gear.....	F-187
5.10.7	Replacing the fusing roller /Lw assy /Lubrication to the pressure warm assy.....	F-188
5.10.8	Replacing the fusing cleaning sheet assy.....	F-189
5.10.9	Removing/reinstalling the fusing heating roller assembly.....	F-190
5.10.10	Replacing the fusing heater lamp /3 (L3).....	F-191
5.10.11	Replacing the fusing heating roller, the heat insulation sleeve /Lw and the heat roller bearing.....	F-192
5.10.12	Replacing the fusing claw /Lw.....	F-192
5.10.13	Replacing the fusing claw /Up.....	F-193
5.10.14	Replacing the fusing claws installation assy.....	F-194
5.10.15	Replacing the fusing temperature sensor /2 (TH2).....	F-195
5.10.16	Replacing the fusing temperature sensor /4 (TH4).....	F-197
5.10.17	Replacing the pressure worm assy and the pressure wheel assy (1250/1250P/1052/EF only).....	F-198
5.10.18	Replacing the fusing cleaning roller, the bearing /G and the web prevention part assy.....	F-199
5.10.19	Replacing the fusing oscillation cam assy.....	F-200
5.11	Paper exit section.....	F-201
5.11.1	Removing/reinstalling the paper exit section.....	F-201
5.11.2	Cleaning paper exit sensor (PS3).....	F-201
5.11.3	Replacing the main body paper exit roller.....	F-201
5.12	Main body rear side.....	F-202
5.12.1	Way to distinguish between the main body rear side motor of 1250/1250P/1052 and the main body rear side motor of 951.....	F-202
5.12.2	Replacing the fusing motor (M1) and the fusing gear.....	F-202
5.12.3	Replacing the web motor (M24).....	F-203
5.12.4	Replacing the drum motor (M2).....	F-204
5.12.5	Replacing the drum cleaner motor (M35).....	F-205
5.12.6	Replacing the developing motor (M3) and the developing screw motor (M21).....	F-206
5.12.7	Replacing the transfer belt cleaning motor (M5) and the belt cleaning gear.....	F-206
5.12.8	Replacing the waste toner motor (M9).....	F-209
5.12.9	Replacing the paper exit motor (M20).....	F-210
5.12.10	Replacing the paper exit conveyance motor (M31).....	F-211
5.12.11	Replacing the paper feed motor (M4), the paper feed gear, the vertical conveyance motor (M8) and the conveyance gear.....	F-211
6.	PERIODICAL MAINTENANCE PROCEDURE DF-615 /616.....	F-216
6.1	Precautions on maintenance	F-216
6.2	Paper feed section.....	F-216
6.2.1	Replacing the pick-up roller/paper feed roller/paper feed assist roller.....	F-216
6.2.2	Replacing the separation roller/torque limiter.....	F-218
6.2.3	Cleaning the pick-up roller unit.....	F-220
6.2.4	Cleaning the cleaning pad/registration roller.....	F-221
6.2.5	Cleaning the pre-separation rubber.....	F-221
6.2.6	Cleaning the paper feed section sensor.....	F-222
6.3	Conveyance section.....	F-223
6.3.1	Cleaning the conveyance section sensor (DF-615).....	F-223
6.3.2	Cleaning the conveyance section sensor (DF-616).....	F-223
6.4	Read section.....	F-224
6.4.1	Cleaning the read section sensor/mirror for the sensor.....	F-224
6.4.2	Cleaning of the centering sensor (DF-615 only).....	F-225
6.5	Paper exit section.....	F-226
6.5.1	Cleaning the mirror on the driven roller assembly/paper exit section sensor/mirror for the sensor.....	F-226
7.	PERIODICAL MAINTENANCE PROCEDURE PF-703.....	F-228
7.1	Precautions on maintenance	F-228
7.2	Paper feed tray section.....	F-228
7.2.1	Replacing procedure of the shutter solenoids /1 (SD10), /2 (SD11), /3 (SD12).....	F-228
7.2.2	Replacing the shutter solenoids /Fr1 (SD4), /Fr2 (SD6), /Fr3 (SD8), /Rr1 (SD5), /Rr2 (SD7) and /Rr3 (SD9).....	F-230
7.2.3	Cleaning the paper feed sensor /1 (PS2), /2 (PS6), /3 (PS10).....	F-234
7.3	Paper feed suction section.....	F-235
7.3.1	Replacing the torque limiter.....	F-235
7.3.2	Replacing the paper feed clutch /1 (CL7), /2 (CL8), /3 (CL9).....	F-237
7.3.3	Replacing the paper feed belt.....	F-237
7.4	Vertical conveyance section.....	F-239
7.4.1	Replacing the pre-registration clutch /1 (CL1), /2 (CL3), /3 (CL5), the intermediate clutch /1 (CL2), /2 (CL4), and the horizontal conveyance exit clutch (CL6).....	F-239
7.4.2	Replacing the torque limiters /Up and /Lw.....	F-241
7.4.3	Replacing the pre-registration roller, the intermediate conveyance roller, the pre-registration bearing, and the bearing C.....	F-242
7.5	Exit conveyance section (PF).....	F-245

7.5.1	Replacing PF paper exit roller, the bearings /C and /B.....	F-245
7.6	Exit conveyance section (PI-PFU).....	F-246
7.6.1	Replacing the PF paper exit roller /2, the bearings /C and /B.....	F-246
7.7	Horizontal conveyance section.....	F-248
7.7.1	Replacing the horizontal conveyance rollers /A and /B, the spacer.....	F-248
7.8	ENTRANCE CONVEYANCE SECTION.....	F-252
7.8.1	Replacing the entrance conveyance roller /Up, the spacer (in the case of PI-PFU).....	F-252
7.8.2	Replacing the entrance conveyance roller /Lw, the spacer (in the case of PF).....	F-253
8.	PERIODICAL MAINTENANCE PROCEDURE PF-706/PP-701.....	F-255
8.1	Precautions on maintenance	F-255
8.2	Tray section.....	F-255
8.2.1	Removing/reinstalling the pick-up roller assy and the separation roller assy.....	F-255
8.2.2	Replacing the pick-up roller and the paper feed roller.....	F-259
8.2.3	Replacing the separation roller.....	F-260
8.2.4	Replacing the paper dust removing brush.....	F-261
8.2.5	Replacing the paper feed clutch, the separation clutch and the forced separation clutch.....	F-262
8.2.6	Replacing the torque limiter /A and the cover.....	F-262
8.2.7	Replacing the idler shaft and the bearing /E.....	F-264
8.3	Separation section.....	F-265
8.3.1	Replacement procedure of the parts at the separation section.....	F-265
8.4	Conveyance section.....	F-268
8.4.1	Replacing the pre-registration clutches /1 (CL1), /2 (CL3) and /3 (CL5) and the intermediate clutches /Up (CL2) and /Lw (CL4).....	F-268
8.4.2	Replacing the torque limiters /Up and /Lw.....	F-269
8.4.3	Replacing the pre-registration roller and the registration bearing.....	F-270
8.4.4	Replacing the intermediate conveyance roller and the bearing /C.....	F-271
8.4.5	Replacing the PF paper exit roller and the bearings /B and /C.....	F-273
8.5	Drive section.....	F-274
8.5.1	Parts replacement procedure of the drive section.....	F-274
8.5.2	Replacing the paper feed drive pulley.....	F-277
8.6	PP-701.....	F-278
8.6.1	Replacing the pick-up roller and the paper feed roller.....	F-278
8.6.2	Replacing the separation roller.....	F-279
9.	PERIODICAL MAINTENANCE PROCEDURE LU-409/410.....	F-280
9.1	Precautions on maintenance	F-280
9.2	Paper feed section.....	F-280
9.2.1	Cleaning the paper dust removing brush.....	F-280
9.2.2	Removing/installing paper feed roller unit.....	F-280
9.2.3	Replacing the paper feed roller/pick-up roller.....	F-281
9.2.4	Replacing the separation roller and the torque limiter.....	F-282
9.2.5	Replacing paper feed clutch (CL101) /pre-registration clutch (CL102).....	F-284
9.2.6	Replacing the pre-registration roller and the pre-registration bearing.....	F-285
9.2.7	Replacing paper feed idler gear/paper feed input gear.....	F-286
10.	PERIODICAL MAINTENANCE PROCEDURE EF-102.....	F-289
10.1	Precautions on maintenance	F-289
10.2	Fusing section.....	F-289
11.	PERIODICAL MAINTENANCE PROCEDURE RU-509/HM-102	F-290
11.1	Precautions on maintenance	F-290
11.2	Output paper density detection section	F-290
11.2.1	Cleaning the shutter	F-290
11.3	Humidification section (HM-102)	F-290
11.3.1	Replacing the humidification rollers /Rt and /Lt and the water feed roller	F-290
11.3.2	Replacing the water feed filter	F-296
11.3.3	Replacing the pump motor (P1).....	F-297
12.	PERIODICAL MAINTENANCE PROCEDURE RU-510.....	F-299
12.1	Precautions on maintenance	F-299
12.2	Conveyance section.....	F-299
12.2.1	Replacing the entrance conveyance motor (M1), the entrance conveyance belt, the paper exit motor (M2), the paper exit conveyance belt.....	F-299
12.2.2	Replacing the paper exit pulley and the conveyance pulley.....	F-300
12.2.3	Replacing the entrance roller /1, /2, paper exit roller, bearing /K and bearing assy.....	F-300
12.2.4	Replacing the merging section roller and bearing /K.....	F-301
12.2.5	Replacing the stacker entrance roller and bearing /K.....	F-302
12.2.6	Replacing the refeed roller and bearing /K.....	F-303
12.2.7	Replacing the driven roller.....	F-304
12.2.8	Replacing the straight gate.....	F-307
12.2.9	Replacing the stack switch motor (M6).....	F-308
13.	PERIODICAL MAINTENANCE PROCEDURE ZU-608.....	F-309
13.1	Precautions on maintenance	F-309

13.2	Punch section.....	F-309
13.2.1	Replacing the punch scraps conveyance motor (M607).....	F-309
13.2.2	Replacing the punch clutch (CL601).....	F-309
14.	PERIODICAL MAINTENANCE PROCEDURE FS-532.....	F-311
14.1	Precautions on maintenance	F-311
14.2	Conveyance section.....	F-311
14.2.1	Lubrication of the FNS entrance roller conveyance switching cam, the FNS entrance roller conveyance switching gate /Up.....	F-311
14.3	Stacker section.....	F-311
14.3.1	Replacing the paddle.....	F-311
14.3.2	Replacing the stapler unit.....	F-312
14.3.3	Lubrication of the stapler shaft and the rear stopper shaft.....	F-314
14.4	Paper exit section.....	F-315
14.4.1	Lubrication of the paper exit alignment plate shaft.....	F-315
15.	PERIODICAL MAINTENANCE PROCEDURE SD-510.....	F-316
15.1	Precautions on maintenance	F-316
15.2	Stapler section.....	F-316
15.2.1	Replacing the stapler unit.....	F-316
15.2.2	Replacing the paddle /1, /2 and /3.....	F-319
15.2.3	Cleaning the staple guide /Up and /Lw.....	F-319
15.3	Folding section.....	F-320
15.3.1	Cleaning the folding roller /1, /2.....	F-320
16.	PERIODICAL MAINTENANCE PROCEDURE PI-502	F-321
16.1	Precautions on maintenance	F-321
16.2	Paper feed section	F-321
16.2.1	Replacing the pick-up roller /Up and the paper feed roller /Up	F-321
16.2.2	Replacing the pick-up roller /Lw and the paper feed roller /Lw	F-322
16.2.3	Replacing the separation roller /Up and the torque limiter /Up	F-322
16.2.4	Replacing the separation roller /Lw and the torque limiter /Lw	F-323
16.2.5	Replacing the paper feed clutch /Up (CL201) and /Lw (CL202).....	F-324
17.	PERIODICAL MAINTENANCE PROCEDURE LS-505.....	F-326
17.1	Precautions on maintenance	F-326
17.2	Conveyance section	F-326
17.2.1	Replacing the stacker tray up down motor (M1)	F-326
17.2.2	Replacing the paper press solenoid /3 (SD8).....	F-326
17.2.3	Replacing the paper press solenoid /1 (SD6).....	F-329
17.2.4	Replacing the paper press solenoid /2 (SD7).....	F-330
17.2.5	Replacing the rear stopper solenoid (SD3).....	F-330
18.	PERIODICAL MAINTENANCE PROCEDURE FD-503.....	F-332
18.1	Precautions on maintenance	F-332
18.2	Conveyance section	F-332
18.2.1	Replacing roller solenoids /1 (SD5) to /4 (SD8).....	F-332
18.2.2	2nd folding roller solenoid (SD18).....	F-332
18.3	Punch section	F-334
18.3.1	Replacing the punch unit.....	F-334
18.3.2	Cleaning the punch shaft and the punch support board	F-335
18.3.3	Lubricating the punch drive section	F-335
18.4	Main tray section	F-336
18.4.1	Replacing the tray up down motor (M11)	F-336
18.5	PI section	F-337
18.5.1	Replacing the pick-up rubber (Upper stage)	F-337
18.5.2	Replacing the paper feed rubber (Upper stage)	F-339
18.5.3	Replacing the separation rubber (upper stage)	F-340
18.5.4	Replacing the pick-up rubber (Lower stage)	F-341
18.5.5	Replacing the paper feed rubber (lower stage)	F-342
18.5.6	Replacing the separation rubber (lower stage)	F-343
19.	PERIODICAL MAINTENANCE PROCEDURE SD-506.....	F-344
19.1	Precautions on maintenance	F-344
19.2	Right angle conveyance section	F-344
19.2.1	Replacing the roller release solenoid /1 (SD5).....	F-344
19.2.2	Replacing the roller release solenoid /2 (SD6).....	F-344
19.2.3	Replacing the right angle conveyance gate solenoid (SD2).....	F-345
19.2.4	Replacing the roller release solenoid /3 (SD7).....	F-349
19.3	Saddle stitching section	F-350
19.3.1	Replacing the stapler assy	F-350
19.3.2	Replacing the slope unit	F-353
19.3.3	Pulling out the saddle stitching unit	F-355
19.3.4	Replacing the saddle stitching unit	F-357
19.4	Trimmer section	F-358

19.4.1	Removing/installing the trimmer paddle assy	F-358
19.4.2	Replacing the trimmer blade kit	F-358
19.4.3	Replacing the trimmer board assy	F-360
19.4.4	Replacing the trimming unit	F-361
19.4.5	Replacing the trimmer press motor (M32)	F-363
19.4.6	Replacing the trimmer blade motor (M31)	F-364
19.4.7	Lubrication to the trimmer unit	F-368
19.5	Bundle processing section	F-369
19.5.1	Replacing the bundle press stage gear	F-369
19.5.2	Replacing the bundle press stage unit	F-371
20.	PERIODICAL MAINTENANCE PROCEDURE PB-503.....	F-376
20.1	Sub compile (SC) section	F-376
20.1.1	Precautions on maintenance	F-376
20.1.2	Replacing the switchback roller	F-376
20.1.3	Replacing the SC switchback release motor (M13) and the one-way clutches /A and /B	F-377
20.1.4	Replacing the SC pressure arm solenoid (SD13)	F-380
20.1.5	Replacing the FD alignment solenoid (SD11)	F-381
20.1.6	Lubrication to the sub scan alignment plate shaft	F-382
20.2	Cover paper table section	F-383
20.2.1	Precautions on maintenance	F-383
20.2.2	Replacing the roller cutter blade assy	F-383
20.2.3	Cleaning the cover paper folding plate and the book spine backing plate	F-384
20.2.4	Lubrication to the cover paper alignment plate shaft	F-385
20.3	Cover paper supply section	F-386
20.3.1	Removing/reinstalling the pick-up roller assy and the separation roller assy	F-386
20.3.2	Replacing the pick-up roller and the paper feed roller	F-389
20.3.3	Replacing the separation roller	F-391
20.3.4	Replacing the cover paper feed clutch (CL71) and the cover paper separation clutch (CL72)	F-391
20.4	Conveyance section	F-392
20.4.1	Replacing the sub tray exit solenoid (SD4)	F-392
20.5	Framework section	F-394
20.5.1	Replacing the exhaust filters /A and /B	F-394
20.6	Glue tank section	F-395
20.6.1	Replacing the glue apply roller drive gear bearing	F-395
20.6.2	Lubrication to the glue apply roller drive gear	F-397
20.6.3	Replacing the pellet supply cooling fan (FM4)	F-398
20.6.4	Replacing the glue tank assy	F-398
20.7	Clamp section	F-401
20.7.1	Lubrication to the clamp pressing board shaft	F-401
20.8	Book stock section	F-401
20.8.1	Lubrication to the guide shafts /Rt and /Lt	F-401

(1) Purpose.....	I-307
(2) Usage.....	I-307
(3) Procedure.....	I-307
13.2 Paper feed roller pressure adjustment (LU-410 only).....	I-307
(1) Purpose.....	I-307
(2) Usage.....	I-307
(3) Procedure.....	I-307
13.3 Paper lift plate horizontal adjustment.....	I-308
(1) Purpose.....	I-308
(2) Usage.....	I-308
(3) Procedure.....	I-308
13.4 Paper centering adjustment.....	I-309
(1) Purpose.....	I-309
(2) Usage.....	I-309
(3) Procedure.....	I-310
13.5 Paper skew adjustment.....	I-310
(1) Preparation.....	I-310
(2) Adjustment procedure taken when there is a skew found with all of the paper supplied from the LU.....	I-310
(3) Procedure for adjustment when there occurs an irregular skew.....	I-311
13.6 (Maximum) Paper feed height adjustment.....	I-311
(1) Usage.....	I-311
(2) Procedure.....	I-312
13.7 Pick-up roller separation adjustment.....	I-312

(1) Usage.....	I-312
(2) Procedure.....	I-312
14. MECHANICAL ADJUSTMENT RU-509	I-314
14.1 Height adjustment	I-314
(1) Usage	I-314
(2) Procedure	I-314
14.2 Position adjustment of the shutter solenoid (SD5).....	I-314
(1) Usage.....	I-314
(2) Procedure.....	I-315
15. MECHANICAL ADJUSTMENT RU-510.....	I-316
15.1 Height adjustment.....	I-316
(1) Usage	I-316
(2) Procedure	I-316
16. MECHANICAL ADJUSTMENT ZU-608.....	I-317
16.1 Gate solenoid/Lw adjustment.....	I-317
16.1.1 Purpose.....	I-317
16.1.2 Procedure.....	I-317
16.2 1st folding skew adjustment.....	I-317
16.2.1 Purpose.....	I-317
16.2.2 Procedure.....	I-317
16.3 2nd folding skew adjustment.....	I-318
16.3.1 Purpose.....	I-318
16.3.2 Procedure.....	I-319
16.4 2nd stopper position adjustment.....	I-319
16.4.1 Purpose.....	I-319
16.4.2 Procedure.....	I-320
17. MECHANICAL ADJUSTMENT FS-532.....	I-322
17.1 Staple position adjustment.....	I-322
17.1.1 Usage.....	I-322
17.1.2 Procedure.....	I-322
17.2 Main tray horizontal adjustment.....	I-323
17.2.1 Purpose.....	I-323
17.2.2 Procedure.....	I-323
18. MECHANICAL ADJUSTMENT SD-510.....	I-325
18.1 Adjustment for Staple Clinch Failure.....	I-325
18.1.1 Usage.....	I-325
18.1.2 Procedure.....	I-325
18.2 1st folding skew adjustment.....	I-325
18.2.1 Usage.....	I-325
18.2.2 Procedure.....	I-325
19. MECHANICAL ADJUSTMENT PK-522.....	I-327
19.1 Punch hole position skew adjustment.....	I-327
19.1.1 Usage.....	I-327
19.1.2 Procedure.....	I-327
19.2 Punch unit adjustment mounting position adjustment.....	I-327
19.2.1 Usage.....	I-327
19.2.2 Procedure.....	I-327
20. MECHANICAL ADJUSTMENT PI-502.....	I-329
20.1 PK punch position centering adjustment.....	I-329
20.1.1 Usage.....	I-329
20.1.2 Adjustment procedure for the cover sheet tray /Up.....	I-329
20.1.3 Adjustment procedure for the cover sheet tray /Lw.....	I-329
21. MECHANICAL ADJUSTMENT LS-505.....	I-331
21.1 Adjusting the paper press solenoid /1 (SD6)	I-331
(1) Usage	I-331
(2) Procedure	I-331
21.2 Adjusting the paper press solenoid /2 (SD7)	I-331
(1) Usage	I-331
(2) Procedure	I-331
21.3 Adjusting the paper press solenoid /3 (SD8)	I-331
(1) Usage	I-331
(2) Procedure	I-332
21.4 Adjusting the job partition solenoid (SD2)	I-332
(1) Usage	I-332
(2) Procedure	I-332
21.5 Horizontal adjustment	I-332
(1) Usage	I-332
(2) Procedure	I-333

21.6	Grip conveyance home sensor adjustment	I-333
(1)	Usage	I-333
(2)	Procedure	I-333
22.	MECHANICAL ADJUSTMENT FD-503.....	I-335
22.1	Roller solenoids /1 (SD5), /2 (SD6), /3 (SD7) and /4 (SD8) position adjustment	I-335
(1)	Usage	I-335
(2)	Procedure	I-335
22.2	2nd folding roller solenoid (SD18) position adjustment	I-335
(1)	Usage	I-335
(2)	Procedure	I-336
22.3	Punch Centering Adjustment	I-336
(1)	Usage.....	I-336
(2)	Procedure	I-336
22.4	Horizontal adjustment	I-337
(1)	Usage	I-337
(2)	Procedure	I-337
22.5	Paper feed control gear position adjustment (PI tray)	I-337
(1)	Usage	I-337
(2)	Procedure	I-337
22.6	Paper feed pick-up volume adjustment (PI tray)	I-338
(1)	Usage	I-338
(2)	Procedure	I-338
23.	MECHANICAL ADJUSTMENT SD-506.....	I-339
23.1	Horizontal adjustment	I-339
(1)	Usage	I-339
(2)	Procedure	I-339
23.2	Folding skew adjustment	I-339
(1)	Usage	I-339
(2)	Procedure	I-339
23.3	Second folding position stabilization adjustment	I-340
(1)	Usage	I-340
(2)	Procedure	I-340
23.4	Staple position adjustment	I-341
(1)	Usage.....	I-341
(2)	Procedure	I-341
(3)	Adjustment Procedure /1	I-341
(4)	Adjustment Procedure /2	I-342
23.5	Stapler position adjustment	I-342
(1)	Usage	I-342
(2)	Procedure	I-342
23.6	Tilt/gap adjustment of the clincher	I-343
(1)	Usage	I-343
(2)	Procedure	I-343
23.7	Roller cutter skew adjustment	I-344
(1)	Usage	I-344
(2)	Procedure	I-345
23.8	Trimming adjustment	I-345
(1)	Usage	I-345
(2)	Procedure	I-346
24.	MECHANICAL ADJUSTMENT PB-503.....	I-347
24.1	Clamp sub scan direction alignment adjustment	I-347
(1)	Usage.....	I-347
(2)	Procedure.....	I-347
24.2	Clamp main scan direction alignment adjustment	I-347
(1)	Usage	I-347
(2)	Procedure	I-348
24.3	Pellet supply arm angle adjustment	I-348
(1)	Usage	I-348
(2)	Procedure	I-348
24.4	Glue apply roller gap adjustment	I-349
(1)	Usage	I-349
(2)	Procedure	I-349
24.5	Cover paper glue gap adjustment	I-349
(1)	Usage	I-349
(2)	Gap adjustment procedure in thin coat mode	I-350
(3)	Gap adjustment procedure in thick coat mode	I-350
24.6	Glue tank movement rail tilt adjustment	I-351
(1)	Usage	I-351
(2)	Procedure	I-351
24.7	Cover paper folding plate nipping adjustment	I-351

(1) Usage	I-351
(2) Procedure	I-352
24.8 Cover paper folding plate parallel adjustment	I-352
(1) Usage	I-352
(2) Procedure	I-352
24.9 Cover paper table up down belt adjustment	I-353
(1) Usage	I-353
(2) Check point	I-353
(3) Procedure	I-354
24.10 Cover paper alignment plate adjustment	I-354
(1) Usage	I-354
(2) Procedure	I-355
24.11 Cover paper cutting skew adjustment	I-355
(1) Usage	I-355
(2) Procedure	I-355
24.12 Cover paper table positioning	I-356
(1) Usage.....	I-356
(2) Procedure	I-356
24.13 Cover paper tray pick-up adjustment	I-356
(1) Usage	I-356
(2) Procedure	I-357
24.14 Cover paper tray pick-up roller height adjustment	I-358
(1) Usage.....	I-358
(2) Procedure	I-359
24.15 Cover paper tray separation pressure adjustment	I-360
(1) Usage	I-360
(2) Procedure	I-361
24.16 Cover paper tray Centering Adjustment	I-361
(1) Usage	I-361
(2) Procedure	I-361
24.17 Cover paper tray lift plate horizontal adjustment	I-361
(1) Usage	I-361
(2) Procedure	I-362
24.18 Height adjustment	I-364
(1) Usage	I-364
(2) Procedure	I-365

J REWRITING OF FIRMWARE.....J-1

1. OUTLINE.....	J-1
1.1 Precautions on rewriting the firmware.....	J-1
(1) ISW execution procedures.....	J-1
(2) DIPSW and toggle SW setting on the boards.....	J-1
(3) Connecting short connector when rewriting firmware.....	J-1
1.2 Firmware data flow.....	J-2
1.3 Main body setting for ISW.....	J-2
(1) Type of setting.....	J-2
(2) When in the version up of the program.....	J-2
(3) When writing new firmware (When replacing board and rewriting firmware failed).....	J-2
1.4 Type.....	J-2
(1) USB Memory ISW.....	J-2
(2) Internet ISW.....	J-2
1.5 Error list.....	J-3
(1) Main body error list.....	J-3
(2) Troubleshooting procedure for the main body error.....	J-3
2. ISWTrns_G	J-5
2.1 Specifications	J-5
2.1.1 ISWTrns_G (PC software)	J-5
2.2 Installation of the ISWTrns_G	J-5
(1) Procedure	J-5
2.3 Usage of the ISWTrns_G	J-6
2.3.1 Firmware checksum check	J-6
2.4 Error list	J-7
(1) ISWTrns_G error list	J-7
(2) ISWTrns_G troubleshooting	J-7
3. USB MEMORY ISW.....	J-8
3.1 Usage of the USB memory ISW.....	J-8
(1) Board to be rewritten and firmware.....	J-8
(2) Procedure.....	J-8
(3) Main body error list.....	J-10
3.2 ISW Procedure of GP-502.....	J-10

3.2.1 Procedure of rewriting M1.....	J-10
3.2.2 Procedure of rewriting M2.....	J-12
3.2.3 Procedure of rewriting M3.....	J-15
3.3 Boot USB memory ISW.....	J-18
(1) Board to be rewritten and firmware.....	J-18
(2) Procedure.....	J-18
4. INTERNET ISW.....	J-20
4.1 Outline.....	J-20
4.2 Operating environment.....	J-20
4.3 Initialization.....	J-20
(1) Setting from the operation panel.....	J-20
(2) Setting from the Web browser.....	J-20
4.4 Internet ISW using the Web Utilities.....	J-22
(1) Procedure.....	J-23
4.5 Usage precautions.....	J-24
4.5.1 Notice to administrator.....	J-24
4.5.2 Power cut during writing.....	J-24
4.6 Internet ISW using the operation panel.....	J-24
(1) Procedure.....	J-24
(2) Main body error list.....	J-25
4.7 Authentication of the proxy server in Internet ISW.....	J-25
(1) Proxy server.....	J-25
(2) Authentication of the proxy server.....	J-25
(3) Authentication type of the proxy server and the command list.....	J-25
(4) Remark.....	J-26

9.2.5 Book stopper drive	PQ-71
9.3 Operation	PQ-71
9.3.1 Book stock section operation overview	PQ-71
9.3.2 Book conveyance and movement control	PQ-72
9.3.3 Book conveyance belt control	PQ-74
9.3.4 Book conveyance up down control	PQ-74
9.3.5 Book movement control	PQ-75
9.3.6 Book stopper control	PQ-76
9.3.7 Book full status detection control	PQ-76
10. RELAY CONVEYANCE SECTION	PQ-77
10.1 Configuration	PQ-77
10.2 Drive	PQ-77
10.2.1 Relay conveyance roller drive / Relay paper exit roller drive	PQ-77
10.3 Operation	PQ-78
10.3.1 Relay conveyance control	PQ-78
11. OTHERS	PQ-79
11.1 Fan control	PQ-79
11.1.1	PQ-79
11.2 Door opening/closing control	PQ-79
PR THEORY OF OPERATION GP-501.....	PR-1
1. PREFACE.....	PR-1
1.1 INTRODUCTION.....	PR-1
1.1.1 Setting the Right Expectations.....	PR-1
1.2 PRODUCT POSITIONING.....	PR-1
1.3 LONG EDGE FEED (LEF) ONLY.....	PR-1
2. OUTLINE.....	PR-2
2.1 Unit configuration diagram.....	PR-2
2.2 Paper path.....	PR-3
3. CONVEYANCE SECTION.....	PR-4
3.1 Configuration.....	PR-4
4. PRINCIPLE OF OPERATION.....	PR-5
4.1 Punch conveyance control.....	PR-5
4.2 Punch operation.....	PR-6
4.3 Chip tray control.....	PR-7
4.4 Bypass conveyance control.....	PR-7
5. PUNCH MODULE.....	PR-9
5.1 Tools Required.....	PR-9
5.2 Procedure.....	PR-9
PS THEORY OF OPERATION GP-502.....	PS-1
1. THEORY OF OPERATION.....	PS-1
PT THEORY OF OPERATION IC UNIT.....	PT-1
1. SYSTEM CONTROL SECTION.....	PT-1
1.1 Configuration.....	PT-1
Q IMAGE POSITION ADJUSTMENT.....	Q-1
1. UNDERSTANDING THE CHARACTER OF THE PAPER.....	Q-1
1.1 The shrinkage of the paper.....	Q-1
1.2 The dimensional accuracy of the paper.....	Q-1
1.3 Precautions on supplying papers.....	Q-1
2. BASIC OPERATION.....	Q-2
2.1 Both sides adjustment (Preparation).....	Q-2
2.1.1 Preparation for papers.....	Q-2
2.1.2 About the adjustment procedure.....	Q-2
2.2 Both sides adjustment (Mechanical adjustment).....	Q-2
2.2.1 Skew adjustment.....	Q-2
2.2.2 Distortion adjustment.....	Q-5
2.3 Both sides adjustment (Software adjustment).....	Q-9
2.3.1 Printer Restart Timing Adjustment(Side2) rough adjustment.....	Q-9
2.3.2 Printer FD-Mag. Adj.(Side2).....	Q-10
2.3.3 Printer Restart Timing Adjustment (Side2).....	Q-12
2.3.4 Printer CD-Mag. Adjustment (Side2).....	Q-12
2.3.5 Both Sides Adj. Image Shift for the upper and lower (Side2).....	Q-13
2.4 About the Both Sides Adj.....	Q-15
2.4.1 About "4 Both Sides Adjust" in "User's Guide POD Administrator's Reference" and "I8.2.6 The front and back registration by user (by paper brand) (front and back registration)" in Service Manual.....	Q-15

2.4.2 About the adjustment procedure of "5.2 01 Machine Adjustment" in "User's Guide POD Administrator's Reference".....	Q-15
2.5 About the line speed adjustment.....	Q-15
2.6 About the transfer belt.....	Q-15
2.7 Adjustment mode.....	Q-15
3. ADVANCED OPERATION.....	Q-16
3.1 When the mis-centering unexpectedly occurs.....	Q-16
3.1.1 Checkpoint.....	Q-16
3.1.2 Centering.....	Q-16
3.1.3 Skew (Tilt).....	Q-17
3.1.4 The trouble with the paper conveyance timing.....	Q-18
3.2 When the particular paper is skewed.....	Q-18
3.2.1 Paper types that are easily skewed.....	Q-18
3.2.2 Checkpoint and handling.....	Q-18
3.3 When the mis-centering is excessive.....	Q-18
3.3.1 Checkpoint and handling.....	Q-18

Revision list

bizhub PRESS 1250/1250P/1052/PRO 951 Version 1.0

No.	ID	Title	Ver.	Descriptions of revision	Date
1	-	-	-	1250/1250P/1052 is added to the machine name.	2012/05/31
2	D00007531 36	A.4. WARNING INDICATIONS ON THE MACHINE	4	The indication of warning is added.	2012/05/31
3	D00007373 83	B.2. PRODUCT NAME	5	The information of ineo is added.	2012/05/31
4	D00007484 62	C.1.4 Recommended paper	2	The recommended paper is added. Correction of error in writing	2012/05/31
5	D00007484 63	C.1.5 Materials	2	Correction of error in writing	2012/05/31
6	D00007484 65	C.1.7 Machine data	2	Correction of error in writing	2012/05/31
7	D00007484 70	C.2.4 Recommended paper	2	The recommended paper is added. Correction of error in writing	2012/05/31
8	D00007484 71	C.2.5 Materials	2	Correction of error in writing	2012/05/31
9	D00007484 73	C.2.7 Machine data	2	Correction of error in writing	2012/05/31
10	D00007517 78	C.3.2 Functions	3	Correction of error in writing	2012/05/31
11	D00007484 85	C.4.3 Type of paper	2	The information of 1250/1250P/1052 is added.	2012/05/31
12	D00007484 97	C.7.3 Type of paper	2	Correction of error in writing	2012/05/31
13	D00007485 05	C.9.3 Type of paper	2	Correction of error in writing	2012/05/31
14	-	C.12 EF-102	-	The information of EF-102 is added.	2012/05/31
15	D00007505 75	C.13.2 Functions	2	The information of 1250/1250P/1052 is added.	2012/05/31
16	D00007485 21	C.13.3 Type of paper	2	The information of 1250/1250P/1052 is added.	2012/05/31
17	D00007485 22	C.14.3 Type of paper	3	The information of 1250/1250P/1052 is added.	2012/05/31
18	-	C.15 RU-510	-	The information of RU-510 is added.	2012/05/31
19	D00007485 29	C.16.2 Functions	2	Correction of error in writing	2012/05/31
20	D00007485 34	C.17.2 Functions	2	The information of 1250/1250P/1052 is added.	2012/05/31
21	D00007485 35	C.17.3 Type of paper	2	The information of 1250/1250P/1052 is added.	2012/05/31
22	D00007485 39	C.18.2 Functions	2	Correction of error in writing	2012/05/31
23	D00007485 40	C.18.3 Type of paper	2	The information of 1250/1250P/1052 is added.	2012/05/31
24	D00007505 91	C.19.2 Functions	3	The information of 1250/1250P/1052 is added.	2012/05/31
25	D00007485 43	C.19.3 Type of paper	2	Correction of error in writing	2012/05/31
26	D00008386 87	C.22.2 Functions	3	The information of 1250/1250P/1052 is added.	2012/05/31
27	D00008386 88	C.22.3 Type of paper	3	The information of 1250/1250P/1052 is added.	2012/05/31
28	D00008386 92	C.23.2 Functions	4	The information of 1250/1250P/1052 is added.	2012/05/31
29	D00008386 93	C.23.3 Type of paper	3	The information of 1250/1250P/1052 is added.	2012/05/31
30	D00008386 94	C.24.3 Type of paper	5	The information of 1250/1250P/1052 is added.	2012/05/31
31	D00008386 99	C.25.2 Functions	2	The information of 1250/1250P/1052 is added.	2012/05/31
32	D00008387 00	C.25.3 Type of paper	3	The recommended paper is added.	2012/05/31
33	-	C.28 GP-502	-	The information of GP-502 is added.	2012/05/31

No.	ID	Title	Ver.	Descriptions of revision	Date
34	D00007485 61	D.1.1 SYSTEM CONFIGURATION (1250/1250P/1052)	2	The information of 1250/1250P/1052 is added.	2012/05/31
35	D00007485 62	D.1.2 Configuration for optional device (1250/1250P/1052)	2	The information of 1250/1250P/1052 is added.	2012/05/31
36	D00007485 63	D.1.3 System configuration (951)	2	The information of AU-201 is added.	2012/05/31
37	D00007485 65	D.2. MAIN BODY UNIT CONFIGURATION	2	Correction of error in writing	2012/05/31
38	D00007485 69	D.3.3 Paper exit process of RU-510 according to the difference of the finishing option and the weight	2	The information of 1250/1250P/1052 is added.	2012/05/31
39	D00007485 76	D.5.6 Separation process (Step 5)	2	Correction of error in writing	2012/05/31
40	D00007485 83	D.7. PROCESS SPEED	2	The information of 1250/1250P/1052 is added.	2012/05/31
41	D00007507 45	E.1.1.1 Service material list	5	Correction of error in writing	2012/05/31
42	D00007485 84	E.1.2.1 Jig list	2	The information of GP-502 is added.	2012/05/31
43	D00007486 00	E.1.7.1 Load from external memory	2	Correction of error in writing	2012/05/31
44	D00007486 01	E.1.7.2 Store to external memory	2	The note is added.	2012/05/31
45	D00008387 03	E.1.8.1 Outline	5	The information of 1250/1250P/1052 is added.	2012/05/31
46	D00008387 06	E.1.8.4 Technician mode	4	The information of 1250/1250P/1052 is added.	2012/05/31
47	D00007486 07	E.1.8.6 bizhub PRESS C7000/6000 replacement procedure	2	Describing method is changed.	2012/05/31
48	D00007486 08	E.1.8.7 bizhub PRESS 1250/1250P/1052 replacement procedure	2	The information of 1250/1250P/1052 is added.	2012/05/31
49	D00008387 22	E.1.8.11 Error message list	3	The information of 1250/1250P/1052 is added.	2012/05/31
50	D00007507 70	E.1.9.2 Preparation	3	The information of 1250/1250P/1052 is added.	2012/05/31
51	D00007507 71	E.1.9.3 Procedure for acquisition	3	The information of 1250/1250P/1052 is added.	2012/05/31
52	D00007517 21	F.1.2.1 1250/1250P/1052	2	The information of 1250/1250P/1052 is added.	2012/05/31
53	D00007517 35	F.1.2.5 PF-706	2	Correction of error in writing	2012/05/31
54	D00007517 25	F.1.2.6 EF-102	2	The information of EF-102 is added.	2012/05/31
55	D00007517 26	F.1.2.7 RU-509/HM-102	2	The information of 1250/1250P/1052 is added.	2012/05/31
56	D00007517 27	F.1.2.8 RU-510	2	The information of RU-510 is added.	2012/05/31
57	D00007517 33	F.1.2.14 LS-505	2	The information of 1250/1250P/1052 is added.	2012/05/31
58	D00007517 34	F.1.2.15 FD-503	2	The information of 1250/1250P/1052 is added.	2012/05/31
59	D00007515 53	F.1.2.16 SD-506	2	The information of 1250/1250P/1052 is added.	2012/05/31
60	D00007515 54	F.1.2.17 PB-503	2	The information of 1250/1250P/1052 is added.	2012/05/31
61	D00008080 11	F.1.2.18 GP-501	2	The information of 1250/1250P/1052 is added.	2012/05/31
62	D00008080 13	F.1.2.19 GP-502	2	The information of GP-502 is added.	2012/05/31
63	D00007517 36	F.1.3.1 951	2	Correction of error in writing	2012/05/31
64	D00007517 38	F.1.3.3 PF-706	2	Correction of error in writing	2012/05/31
65	D00008080 12	F.1.3.11 GP-501	2	Correction of error in writing	2012/05/31

No.	ID	Title	Ver.	Descriptions of revision	Date
66	D0000808014	F.1.3.12 GP-502	2	The information of GP-502 is added.	2012/05/31
67	D0000751745	F.2.2.1 Periodically replaced parts list	2	The information of 1250/1250P/1052 is added.	2012/05/31
68	D0000751746	F.2.2.2 Spotted replacement parts list	2	The information of 1250/1250P/1052 is added.	2012/05/31
69	D0000751747	F.2.3.1 Periodically replaced parts list	2	Correction of error in writing	2012/05/31
70	D0000751748	F.2.3.2 Spotted replacement parts list	2	The information of GP-502 is added.	2012/05/31
71	D0000751522	F.3.1 Life value of the ORU-M parts	2	The information of EF-102 is added.	2012/05/31
72	D0000748613	F.3.2 ORU-M parts list	2	The information of 1250/1250P/1052 is added.	2012/05/31
73	D0000737388	F.5.1 Precautions on maintenance	3	The note is added.	2012/05/31
74	D0000733753	F.5.4.1 Replacing the suction filter	2	Correction of error in writing	2012/05/31
75	D0000733777	F.5.7.3 Replacing the separation roller	2	Correction of error in writing	2012/05/31
76	D0000733780	F.5.7.6 Replacing the paper feed clutch/separation clutch	2	The information of 1250/1250P/1052 is added.	2012/05/31
77	D0000733781	F.5.7.7 Replacement procedure of the parts at the separation section	2	The information of 1250/1250P/1052 is added.	2012/05/31
78	D0000733787	F.5.8.6 Replacing the conveyance exit roller peripheral parts	2	The note is added.	2012/05/31
79	D0000733802	F.5.9.13 Replacing the registration roller / Up, the registration bearing, the roller gear /Rt, the registration gears /Up and / Lw	2	Correction of error in writing	2012/05/31
80	D0000733807	F.5.9.18 Replacing the cleaning brush, the cleaning shaft, the regulation plate assy and the power supply parts	2	Correction of error in writing	2012/05/31
81	D0000733809	F.5.9.20 Replacing the loop motor (M18)	2	Correction of error in writing	2012/05/31
82	D0000733827	F.5.9.38 Replacing the fusing exit roller and the coupling unit	2	Correction of error in writing	2012/05/31
83	D0000733834	F.5.10.2 Replacing the fusing cleaning web	2	The information of EF-102 is added.	2012/05/31
84	D0000733837	F.5.10.5 Replacing the fusing heater lamps /1 (L1) and /2 (L2)	2	The information of EF-102 is added.	2012/05/31
85	D0000733838	F.5.10.6 Replacing the fusing roller /Up, the heat insulating sleeve, the fusing bearing /Up and the fusing gear	2	The information of EF-102 is added.	2012/05/31
86	D0000733839	F.5.10.7 Replacing the fusing roller /Lw assy /Lubrication to the pressure warm assy	2	The information of EF-102 is added.	2012/05/31
87	D0000733840	F.5.10.8 Replacing the fusing cleaning sheet assy	2	The information of E-102 is added.	2012/05/31
88	D0000733842	F.5.10.10 Replacing the fusing heater lamp /3 (L3)	2	The information of E-102 is added.	2012/05/31
89	D0000733843	F.5.10.11 Replacing the fusing heating roller, the heat insulation sleeve /Lw and the heat roller bearing	2	The information of EF-102 is added.	2012/05/31
90	D0000733844	F.5.10.12 Replacing the fusing claw /Lw	2	The information of EF-102 is added.	2012/05/31
91	D0000733845	F.5.10.13 Replacing the fusing claw /Up	2	The information of EF-102 is added.	2012/05/31
92	D0000733846	F.5.10.14 Replacing the fusing claws installation assy	2	The information of EF-102 is added.	2012/05/31
93	D0000733847	F.5.10.15 Replacing the fusing temperature sensor /2 (TH2)	2	The information of EF-102 is added.	2012/05/31
94	D0000733848	F.5.10.16 Replacing the fusing temperature sensor /4 (TH4)	2	The information of EF-102 is added.	2012/05/31
95	D0000733849	F.5.10.17 Replacing the pressure worm assy and the pressure wheel assy (1250/1250P/1052/EF only)	2	The information of EF-102 is added.	2012/05/31

No.	ID	Title	Ver.	Descriptions of revision	Date
96	D00007338 50	F.5.10.18 Replacing the fusing cleaning roller, the bearing /G and the web prevention part assy	2	The information of EF-102 is added.	2012/05/31
97	D00007338 51	F.5.10.19 Replacing the fusing oscillation cam assy	2	The information of EF-102 is added.	2012/05/31
98	D00007338 57	F.5.12.3 Replacing the web motor (M24)	2	Correction of error in writing	2012/05/31
99	D00007556 55	F.5.12.5 Replacing the drum cleaner motor (M35)	2	Correction of error in writing	2012/05/31
100	D00007338 64	F.5.12.11 Replacing the paper feed motor (M4), the paper feed gear, the vertical conveyance motor (M8) and the conveyance gear	2	The note is added.	2012/05/31
101	D00007373 90	F.7.1 Precautions on maintenance	3	The note is added.	2012/05/31
102	D00007338 82	F.7.4.1 Replacing the pre-registration clutch /1 (CL1), /2 (CL3), /3 (CL5), the intermediate clutch /1 (CL2), /2 (CL4), and the horizontal conveyance exit clutch (CL6)	2	Correction of error in writing	2012/05/31
103	D00007338 84	F.7.4.3 Replacing the pre-registration roller, the intermediate conveyance roller, the pre-registration bearing, and the bearing C	2	Correction of error in writing	2012/05/31
104	D00007373 91	F.8.1 Precautions on maintenance	3	The note is added.	2012/05/31
105	D00007338 92	F.8.2.3 Replacing the separation roller	2	Correction of error in writing	2012/05/31
106	D00007339 03	F.8.5.1 Parts replacement procedure of the drive section	2	The note is added.	2012/05/31
107	D00007339 04	F.8.5.2 Replacing the paper feed drive pulley	2	Correction of error in writing	2012/05/31
108	D00007339 11	F.9.2.5 Replacing paper feed clutch (CL101) /pre-registration clutch (CL102)	2	Correction of error in writing	2012/05/31
109	D00008518 69	F.10.2 Fusing section	1	The information of E-102 is added.	2012/05/31
110	D00007373 96	F.11.3.1 Replacing the humidification rollers /Rt and /Lt and the water feed roller	4	Correction of error in writing	2012/05/31
111	D00007374 86	F.11.3.3 Replacing the pump motor (P1)	3	The information of 1250/1250P/1052 is added.	2012/05/31
112	-	F.12. PERIODICAL MAINTENANCE PROCEDURE RU-510	-	The information of RU-510 is added.	2012/05/31
113	D00007339 17	F.14.3.1 Replacing the paddle	2	Correction of error in writing	2012/05/31
114	D00007339 18	F.14.3.2 Replacing the stapler unit	2	Correction of error in writing	2012/05/31
115	D00007937 08	F.14.3.3 Lubrication of the stapler shaft and the rear stopper shaft	2	Correction of error in writing	2012/05/31
116	D00007339 19	F.15.2.1 Replacing the stapler unit	2	Correction of error in writing	2012/05/31
117	D00007339 20	F.15.2.2 Replacing the paddle /1, /2 and /3	2	Correction of error in writing	2012/05/31
118	D00007937 09	F.15.2.3 Cleaning and lubrication of the staple guide /Up and /Lw	2	Correction of error in writing	2012/05/31
119	D00007339 21	F.15.3.1 Cleaning the folding roller /1, /2	2	Correction of error in writing	2012/05/31
120	D00007374 06	F.16.2.1 Replacing the pick-up roller /Up and the paper feed roller /Up	6	Correction of error in writing	2012/05/31
121	D00007374 07	F.16.2.2 Replacing the pick-up roller /Lw and the paper feed roller /Lw	6	Correction of error in writing	2012/05/31
122	D00007374 08	F.16.2.3 Replacing the separation roller /Up and the torque limiter /Up	6	Correction of error in writing	2012/05/31
123	D00007374 09	F.16.2.4 Replacing the separation roller /Lw and the torque limiter /Lw	6	Correction of error in writing	2012/05/31
124	D00007784 90	F.16.2.5 Replacing the paper feed clutch /Up (CL201) and /Lw (CL202)	2	Correction of error in writing	2012/05/31

No.	ID	Title	Ver.	Descriptions of revision	Date
125	D00007374 11	F.17.2.1 Replacing the stacker tray up down motor (M1)	4	The information of 1250/1250P/1052 is added.	2012/05/31
126	D00007374 12	F.17.2.2 Replacing the paper press solenoid /3 (SD8)	4	The information of 1250/1250P/1052 is added.	2012/05/31
127	D00007374 13	F.17.2.3 Replacing the paper press solenoid /1 (SD6)	4	The information of 1250/1250P/1052 is added.	2012/05/31
128	D00007374 14	F.17.2.4 Replacing the paper press solenoid /2 (SD7)	4	The information of 1250/1250P/1052 is added.	2012/05/31
129	D00007374 15	F.17.2.5 Replacing the rear stopper solenoid (SD3)	4	The information of 1250/1250P/1052 is added.	2012/05/31
130	D00007374 17	F.18.2.1 Replacing roller solenoids /1 (SD5) to /4 (SD8)	4	The information of 1250/1250P/1052 is added.	2012/05/31
131	D00007374 18	F.18.2.2 2nd folding roller solenoid (SD18)	4	The information of 1250/1250P/1052 is added.	2012/05/31
132	D00007374 19	F.18.3.1 Replacing the punch unit	4	The information of 1250/1250P/1052 is added.	2012/05/31
133	D00007374 22	F.18.4.1 Replacing the tray up down motor (M11)	4	The information of 1250/1250P/1052 is added.	2012/05/31
134	D00007374 23	F.18.5.1 Replacing the pick-up rubber (Upper stage)	5	The information of 1250/1250P/1052 is added.	2012/05/31
135	D00007374 24	F.18.5.2 Replacing the paper feed rubber (Upper stage)	5	The information of 1250/1250P/1052 is added.	2012/05/31
136	D00007374 25	F.18.5.3 Replacing the separation rubber (upper stage)	5	The information of 1250/1250P/1052 is added.	2012/05/31
137	D00007374 26	F.18.5.4 Replacing the pick-up rubber (Lower stage)	5	The information of 1250/1250P/1052 is added.	2012/05/31
138	D00007374 27	F.18.5.5 Replacing the paper feed rubber (lower stage)	4	The information of 1250/1250P/1052 is added.	2012/05/31
139	D00007374 28	F.18.5.6 Replacing the separation rubber (lower stage)	4	The information of 1250/1250P/1052 is added.	2012/05/31
140	D00007374 30	F.19.2.1 Replacing the roller release solenoid /1 (SD5)	4	The information of 1250/1250P/1052 is added.	2012/05/31
141	D00007374 33	F.19.2.4 Replacing the roller release solenoid /3 (SD7)	4	The information of 1250/1250P/1052 is added.	2012/05/31
142	D00007374 34	F.19.3.1 Replacing the stapler assy	5	The information of 1250/1250P/1052 is added.	2012/05/31
143	D00007374 39	F.19.4.2 Replacing the trimmer blade kit	5	The information of 1250/1250P/1052 is added.	2012/05/31
144	D00007374 40	F.19.4.3 Replacing the trimmer board assy	5	The information of 1250/1250P/1052 is added.	2012/05/31
145	D00007374 41	F.19.4.4 Replacing the trimming unit	4	The information of 1250/1250P/1052 is added.	2012/05/31
146	D00007374 42	F.19.4.5 Replacing the trimmer press motor (M32)	5	The information of 1250/1250P/1052 is added.	2012/05/31
147	D00007374 43	F.19.4.6 Replacing the trimmer blade motor (M31)	5	The information of 1250/1250P/1052 is added.	2012/05/31
148	D00007374 45	F.19.5.1 Replacing the bundle press stage gear	6	The information of 1250/1250P/1052 is added.	2012/05/31
149	D00007374 48	F.20.1.2 Replacing the switchback roller	5	The information of 1250/1250P/1052 is added.	2012/05/31
150	D00007374 49	F.20.1.3 Replacing the SC switchback release motor (M13) and the one-way clutches /A and /B	4	The information of 1250/1250P/1052 is added.	2012/05/31
151	D00007374 50	F.20.1.4 Replacing the SC pressure arm solenoid (SD13)	4	The information of 1250/1250P/1052 is added.	2012/05/31
152	D00007374 51	F.20.1.5 Replacing the FD alignment solenoid (SD11)	4	The information of 1250/1250P/1052 is added.	2012/05/31
153	D00007374 54	F.20.2.2 Replacing the roller cutter blade assy	5	The information of 1250/1250P/1052 is added.	2012/05/31
154	D00007374 58	F.20.3.2 Replacing the pick-up roller and the paper feed roller	4	The information of 1250/1250P/1052 is added.	2012/05/31
155	D00007374 59	F.20.3.3 Replacing the separation roller	4	The information of 1250/1250P/1052 is added.	2012/05/31
156	D00007374 60	F.20.3.4 Replacing the cover paper feed clutch (CL71) and the cover paper separation clutch (CL72)	4	The information of 1250/1250P/1052 is added.	2012/05/31

No.	ID	Title	Ver.	Descriptions of revision	Date
157	D00007374 61	F.20.4.1 Replacing the sub tray exit solenoid (SD4)	5	The information of 1250/1250P/1052 is added.	2012/05/31
158	D00007374 62	F.20.5.1 Replacing the exhaust filters /A and /B	5	The information of 1250/1250P/1052 is added.	2012/05/31
159	D00007374 66	F.20.6.4 Replacing the glue tank assy	5	The information of 1250/1250P/1052 is added.	2012/05/31
160	D00007515 92	F.21.3.29 Back Gauge Removal	4	Correction of error in writing	2012/05/31

A SAFETY AND IMPORTANT WARNING ITEMS

Read carefully the safety and important warning items described below to understand them before doing service work.

1. IMPORTANT NOTICE

- Because of possible hazards to an inexperienced person servicing this product as well as the risk of damage to the product, KONICA MINOLTA BUSINESS TECHNOLOGIES, INC. (hereafter called KMBT) strongly recommends that all servicing be performed only by KMBT-trained service technicians.
- Changes may have been made to this product to improve its performance after this Service Manual was printed. Accordingly, KMBT does not warrant, either explicitly or implicitly, that the information contained in this service manual is complete and accurate.
- The user of this service manual must assume all risks of personal injury and/or damage to the product while servicing the product for which this service manual is intended. Therefore, this service manual must be carefully read before doing service work both in the course of technical training and even after that, for performing maintenance and control of the product properly.
- Keep this service manual also for future service.

2. DESCRIPTION ITEMS FOR DANGER, WARNING AND CAUTION

2.1 Description items in this Service Manual

In this Service Manual, each of three expressions “⚠DANGER”, “⚠WARNING”, and “⚠CAUTION” are defined as follows.

When servicing the product, the relevant works (disassembling, reassembling, adjustment, repair, maintenance, etc.) need to be conducted with utmost care.

 DANGER	: Action having a high possibility of suffering death or serious injury
 WARNING	: Action having a possibility of suffering death or serious injury
 CAUTION	: Action having a possibility of suffering a slight wound and property damage

2.2 Description items for safety and important warning items

Symbols used for safety and important warning items are defined as follows:

 : Precaution when servicing the product.	 General precaution	 Electric hazard	 High temperature
 : Prohibition when servicing the product.	 General prohibition	 Do not touch with wet hand	 Do not disassemble
 : Direction when servicing the product.	 General instruction	 Unplug	 Ground/Earth

Illustrations representing the power plug and wall outlet used in the following descriptions are only typical. Their shapes differ depending on the country or region.

3. SAFETY WARNINGS

3.1 MODIFICATIONS NOT AUTHORIZED BY KONICA MINOLTA BUSINESS TECHNOLOGIES, INC.

KONICA MINOLTA brand products are renowned for their high reliability. This reliability is achieved through high-quality design and a solid service network.

Product design is a highly complicated and delicate process where numerous mechanical, physical, and electrical aspects have to be taken into consideration, with the aim of arriving at proper tolerances and safety factors. For this reason, unauthorized modifications involve a high risk of degradation in performance and safety. Such modifications are therefore strictly prohibited. The points listed below are not exhaustive, but they illustrate the reasoning behind this policy.

3.1.1 Actions requiring special attention

WARNING

- Do not make any modifications to the product unless otherwise instructed by KMBT.

- Do not use any part not specified by KMBT.

- Do not use any power cord or power plug not specified by KMBT.

- Use only the protective fuses specified by KMBT.

Use of any type of fuse or related part not specified by KMBT makes safety devices inoperative which may result in a fire from high heat.

- Do not disable fuse functions or use a wire, metal clip, solder, or other conductor in place of the fuse.

Fire may result from high heat.

- Do not disable relay functions (for example, inserting a piece of paper between relay contacts to hamper circuit action.)

Fire may result from high heat.

WARNING

- Do not disable safety functions (for example, interlocks and safety circuits).

Safety devices become inoperative, resulting in fire from high heat, electric shock, or injury.

3.2 POWER PLUG SELECTION

In some countries or areas, the power plug provided with the product may not fit the wall outlet used in the area. In that case, it is the obligation of the customer engineer (hereafter called the CE) to attach the appropriate power plug or power cord set in order to connect the product to the supply.

3.2.1 Power Cord Set or Power Plug

WARNING

- Use a power supply cord set which meets the following criteria:
 - provided with a plug having configuration intended for the connection to wall outlet appropriate for the product's rated voltage and current, and
 - the plug has pin/terminal(s) for grounding, and
 - provided with three-conductor cable having enough current capacity, and
 - the cord set meets regulatory requirements for the area.

Use of inadequate cord set leads to fire or electric shock.

WARNING

- Attach power plug which meets the following criteria:
 - having configuration intended for the connection to wall outlet appropriate for the product's rated voltage and current, and
 - the plug has pin/terminal(s) for grounding, and
 - meets regulatory requirements for the area.

Use of inadequate cord set leads to the product connecting to inadequate power supply (voltage, current capacity, grounding), and may result in fire or electric shock.

- The wires in the power supply cord shall be connected to the terminals of the plug in accordance with the following:

Color of the wire		Terminal of the plug
Brown	Black	Marked with "L", "A" or "W" or colored RED
Light Blue	White	Marked with "N" or colored BLACK
Green-and-Yellow		Marked with "E", "PE" or "  " or colored GREEN or GREEN-AND-YELLOW

- Wrong connection may cancel safeguards within the product, and results in fire or electric shock.

3.3 CHECKPOINTS WHEN PERFORMING ON-SITE SERVICE

KONICA MINOLTA brand products are extensively tested before shipping, to ensure that all applicable safety standards are met, in order to protect the customer and customer engineer (hereafter called the CE) from the risk of injury. However, in daily use, any electrical equipment may be subject to parts wear and eventual failure. In order to maintain safety and reliability, the CE must perform regular safety checks.

3.3.1 Power Supply

(1) Connection to Power Supply

WARNING

- The power outlet should have a capacity of at least the maximum power consumption and be dedicated only to the product.

The current that can be passed through the outlet is limited and any current exceeding the limit could result in fire.

- If the wall outlet has two or more receptacles and the product and another electrical appliance are plugged into this wall outlet, make sure that the total load does not exceed the rating of the wall outlet. The current that can be passed through the outlet is limited and any current exceeding the limit could result in a fire.

- Do not use any conversion plug adapter even if the power plug shape does not match your wall outlet.

The shapes of the power plug and the wall outlet are set according to the voltage and allowable current. Use of a conversion plug adapter could result in an abnormal voltage or insufficient current capacity, leading to a fire. It may also result in an electric shock due to a grounding failure.

If the plug shape does not match the wall outlet, request the user to perform power source installation work.

WARNING

- Make sure the power cord is plugged into the wall outlet securely.

If the power plug is left loose in the wall outlet, contact failure may occur, leading to abnormal heating of the power plug and a risk of fire.

(2) Ground Connection

WARNING

- Check whether the product is grounded properly.

If current leakage occurs in an ungrounded product, you may suffer electric shock while operating the product.

Connect power plug to grounded wall outlet.

- Make sure of correct ground connection.
If the grounding wire is connected to an inappropriate part, there is a risk of explosion or electric shock. Do not connect the grounding wire to any of the following parts:

- a. Gas pipe: Gas explosion or fire may result.
- b. Lightning rod: Risk of electric shock or fire during lightning.
- c. Grounding wire for telephone line: Risk of electric shock or fire during lightning.
- d. Water pipe and faucet: These parts do not serve as a ground connection because of a plastic part that is very often installed midway within the water pipe.

(3) Power Plug and Cord

WARNING

- When using the power cord set (inlet type) that came with this product, make sure the connector is securely inserted in the inlet of the product.

When a securing measure is provided, secure the cord with the fixture properly. If the power cord (inlet type) is not connected to the product securely, a contact problem may lead to increased resistance, overheating, and risk of fire.

- Do not allow the power cord to be stepped on or pinched. Overheating may occur there, leading to a risk of fire.

- Check whether the power cord is damaged. Check whether the sheath is damaged. If the power plug, cord, or sheath is damaged, replace with a new power cord (with plug and connector on each end) specified by KMBT. Using the damaged power cord may result in fire or electric shock.

- Do not bundle or tie the power cord. Overheating may occur there, leading to a risk of fire.

- Check whether dust is collected around the power plug and wall outlet. Using the power plug and wall outlet without removing dust may result in fire.

- Do not insert the power plug into the wall outlet with a wet hand. The risk of electric shock exists.

WARNING

- When unplugging the power cord, grasp the plug, not the cable.
The cable may be broken, leading to a risk of fire and electric shock.

(4) Wiring

WARNING

- Never use multi-plug adapters to plug multiple power cords in the same outlet.
If used, the risk of fire exists.

- When an extension cord is required, use one that meets the rated current, rated voltage, and the relevant safety standards of the country.

Current that can be passed through the extension cable is limited and fire may result from the use of an inappropriate type of an extension cable.
Do not use an extension cable reel with the cable taken up. Fire may result.

3.3.2 Installation Requirements

(1) Prohibited Installation Places

WARNING

- Do not place the product near flammable materials or volatile materials that may catch fire.

A risk of fire exists.

- Do not place the product in a place exposed to water such as rain.

A risk of fire and electric shock exists.

(2) When not Using the Product for a long time

WARNING

- When the product is not to be used for an extended period of time (for holidays, for example), instruct the user to turn OFF the power switch and unplug the power cord from the power outlet.

Dust collected around the power plug and outlet may cause fire.

(3) Ventilation

CAUTION

- The product generates ozone gas during operation.

If the smell of ozone is present in the following cases, ventilate the room.

- a. When the product is used in a poorly ventilated room
- b. When making a lot of copies
- c. When using multiple products at the same time

(4) Stability

CAUTION

- Be sure to lock the caster stoppers.
In the case of an earthquake, the product may slide, leading to an injury.

3.3.3 After Service

(1) Inspection before Servicing

WARNING

- Before conducting an inspection, read all relevant documentation (service manual, technical notices, etc.) and proceed with the inspection following the prescribed procedure using the recommended personal safety equipment and using only the prescribed tools.

Do not make any adjustment not described in the documentation.

If the prescribed procedure or tool is not used, the product may break and a risk of injury or fire exists.

- Before conducting an inspection, be sure to disconnect the power plugs from the Main Body and Accessories (Options).

When the power plug is inserted into the wall outlet, some units are still powered even if the POWER switch is turned OFF. A risk of electric shock exists.

CAUTION

- The area around the fixing unit is hot. You may get burned.

CAUTION

- Do not leave the machine unattended during transportation, installation, and/or inspection.
If the machine is left unattended, face protrusions toward the wall or take other necessary precautions to prevent a user or other person in the area from stumbling over a protrusion of the machine or being caught by a cable, possibly causing a fall to the floor or other personal injury.

(2) Work Performed with the Product Powered On

WARNING

- Take every care when making adjustments or performing an operation check with the product powered.
If you make adjustments or perform an operation check with the external cover detached, you may touch live or high-voltage parts or you may be caught in moving gears or the timing belt, leading to a risk of injury.

- Take every care when servicing with the external cover detached.
High-voltage exists around the drum unit. A risk of electric shock exists.

- If it is absolutely necessary to service the machine with the door open or external covers removed, always be attentive to the motion of the internal parts.
A normally protected part may cause unexpected hazards.

CAUTION

- Do not keep gazing at a lamp light during the service procedure with the product powered ON.

Eyestrain may result.

(3) Safety Checkpoints

WARNING

- When a product fault is reported from a user, check parts and repair the fault appropriately with safety in mind.

A damaged product, personal injury, or fire may result.

- Whenever mounting an option on the machine, be attentive to the motion of the other workers performing the task.

Another worker may be injured by a pinch point between the machine and the option.

- When mounting an option on the machine, be careful about the clearance between the machine and the option.

You may be injured with your finger or hand pinched between the machine and the option.

- When removing a part that secures a motor, gear, or other moving part, disassembling a unit, or reinstalling any of such parts and units, be careful about moving parts and use care not to drop any part or unit. During the service procedure, give sufficient support for any heavy unit.

You may be injured by a falling part or unit.

WARNING

- Check the external covers and frame for possible sharp edges, burrs, and damage.
They can be a cause of injury during use or servicing.

- When accessing a hard-to-view or narrow spot, be careful about sharp edges and burrs on the frame and parts.
They may injure your hands or fingers.

- Do not allow any metal parts such as clips, staples, and screws to fall into the product.
They can short internal circuits and cause electric shock or spark bursting into flame.

- Check wiring for pinched and any other damage.
Current can leak, leading to a risk of electric shock or fire.

- Check high-voltage cables and sheaths for any damage.
Damage may lead to product failure and/or the risk of fire.

- Do not disassemble or adjust the write unit (PH unit) incorporating a laser.
The laser light can enter your eye, leading to a risk of loss of eyesight.

- Do not supply power with the write unit (PH unit) shifted from the specified mounting position.
The laser light can enter your eye, leading to a risk of loss of eyesight.

- After replacing a part to which AC voltage is applied (e.g., optical lamp and fixing lamp), be sure to check the installation state.
A risk of fire exists.

WARNING

- Check the interlock switch and actuator for loosening and check whether the interlock functions properly.

If the interlock does not function, you may receive an electric shock or be injured when you insert your hand in the product (e.g., for clearing paper jam).

- Make sure the wiring cannot come into contact with sharp edges, burrs, or other pointed parts.

Damage may lead to the risk of electric shock or fire.

- Make sure that all screws, components, wiring, connectors, etc. that were removed for safety check and maintenance have been reinstalled in the original location. (Pay special attention to forgotten connectors, pinched cables, forgotten screws, etc.)

A risk of product trouble, personal injury, electric shock, and fire exists.

- Never use any flammable or combustible spray, fluid, gas, or similar substance in and around the product.

Do not use any flammable or combustible dust spray, in particular, to clean the interior of the product.

Fire or explosion may result.

CAUTION

- Carefully remove all toner remnants and dust from electrical parts and electrode units such as a charging corona unit.

Toner remnants and dust may lead to product failure and/or the risk of fire.

CAUTION

- Check electrode units such as a charging corona unit for deterioration and signs of leakage.
Damage may lead to product failure and/or the risk of fire.

- When replacing a battery, replace it with a new one as specified.
Dispose of the used battery as instructed on its packaging or by local ordinance.
There is a risk of explosion if the battery is replaced with an incorrect type.

(4) Handling of Consumables

WARNING

- For handling of consumables (toner, developer, photoconductor, etc.) and their storage precautions, see MSDS.

(5) Handling of Service Materials

CAUTION

- Handle with care according to MSDS.
Use of solvent may involve explosion, fire, or personal injury.

3.4 FUSE

CAUTION

Double pole / neutral fusing

ATTENTION

Double pôle / fusible sur le neutre.

3.5 Used Batteries Precautions

3.5.1 ALL Areas

CAUTION

Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to the manufacturer's instructions.

3.5.2 Germany

VORSICHT!

Explosionsgefahr bei unsachgemäßem Austausch der Batterie.
Ersatz nur durch denselben oder einen vom Hersteller empfohlenen gleichwertigen Typ.
Entsorgung gebrauchter Batterien nach Angaben des Herstellers.

3.5.3 France

ATTENTION

Il y a danger d'explosion s'il y a remplacement incorrect de la batterie.
Remplacer uniquement avec une batterie du même type ou d'un type équivalent recommandé par le constructeur.
Mettre au rebut les batteries usagées conformément aux instructions du fabricant.

3.5.4 Denmark

ADVARSEL!

Lithiumbatteri - Eksplosionsfare ved fejlagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandøren.

3.5.5 Finland, Sweden

VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.
Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

VARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren.
Kassera använt batteri enligt fabrikantens instruktion.

3.5.6 Norway

ADVARSEL

Eksplosjonsfare ved feilaktig skifte av batteri.
Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten.
Brukte batterier kasseres i henhold til fabrikantens instruksjoner.

4. WARNING INDICATIONS ON THE MACHINE

Caution labels shown are attached in some areas on/in the machine.

When accessing these areas for maintenance, repair, or adjustment, special care should be taken to avoid burns and electric shock.

4.1 Warning indications inside the machine

(Entrance of the reversal output unit)

(Right side of the fixing unit)

(Top surface of the fixing unit)

CAUTION

DO NOT put your hand between the main body and developing fixing unit; otherwise you may be injured.

CAUTION

The fixing unit is very hot.
To avoid getting burned DO NOT TOUCH.

CAUTION

DO NOT put your hand between the main body and developing fixing unit; otherwise you may be injured.

CAUTION

DO NOT INSERT
your finger into the
two ADF hinge
portions;
otherwise you may
be injured.

**WARNING**

DO NOT throw the waste
toner box into a fire. If it
is thrown into a fire, the
toner may ignite and
cause a dangerous
situation.

(FS-532)

**CAUTION**

NEVER put your hand on the top of printed sheets when removing them from the primary (main) tray. Failure to do so may cause unexpected injury, such as getting your fingers squeezed between the main body and the primary (main) tray going upward. Be sure to hold both front and rear sides of the stack to remove it from the tray.

**CAUTION**

NEVER insert your fingers into the space between the main body and the primary (main) tray. Failure to do so may cause unexpected injury, such as getting your fingers squeezed by the primary (main) tray sliding sideways. Please be careful when removing paper from the tray.

(FS-532)

⚠ CAUTION

NEVER put your hand into the hollow portion inside the finisher. The finisher mounted with Punch Kit PK-522 has a hollow portion, in the back of which is located a motor. Touching the motor, you may get burned. Please do not put your hand deep into the hollow portion when removing mishandled paper.

(PB-503)

	⚠ CAUTION High temperature!	⚠ ATTENTION Température élevée!
	⚠ VORSICHT Heiße Oberfläche!	⚠ PRECAUCIÓN Temperatura alta!
	⚠ ATTENZIONE Alta temperatura!	⚠ CUIDADO Alta Temperatura!
	⚠ 注意 高温!	⚠ 주의 고온!
	⚠ 注意 高温!	⚠ تحذير حرارة عالية!

⚠ CAUTION

The paste tank unit is very hot. To avoid getting burned **DO NOT TOUCH.**

(GP-501)

⚠️ **WARNING**

Electrical shock hazard.
Disconnecting power from
this section does not
remove power from
adjacent sections of the
machine.

⚠️ **ATTENTION**

Risque de secousse électrique.
Couper le circuit électrique
dans ce secteur ne mets
pas hors circuit les
sections adjacentes de
cette machine.

⚠️ **MUCHO CUIDADO**

Riesgo de choque eléctrico.
El desconectar la fuente de
alimentación de esta sección
no previene la desconexión
de otras secciones contiguas
a esta máquina.

⚠️ **WARNUNG**

Elektroschockgefahr.
Abschalten des Stroms von
diesem Teil der Maschine
unterbricht nicht den
Strom von anliegenden
Teilen der Maschine.

⚠️ WARNING

This safety message you could get an electrical shock because disconnecting power from this section does not cut off power from adjacent sections of the machine.

<div><div>⚠️ ATTENTION</div><div>Risque de secousse électrique. Ne pas ouvrir. Pas de pièces réparables par l'utilisateur. Entretien par personnel qualifié.</div></div> <div><div></div></div>	<div><div>⚠️ WARNING</div><div>Electrical shock hazard. Do not open. No user serviceable parts inside. Refer servicing to qualified service personnel.</div></div> <div><div></div></div>
<div><div>⚠️ WARNUNG</div><div>Spannungsführende Teile. Nicht öffnen. Enthält keine vom Endverbraucher zu wartende Teile. Für Service bitte an qualifiziertes Service-Personal wenden.</div></div> <div><div>⚠️ MUCHO CUIDADO</div><div>Riesgo de choque eléctrico. No abra. Adentro, no hay piezas reparables para el usuario. Mantenimiento solamente para personal calificado.</div></div>	

⚠️ **WAARSCHUWING**

Kans op elektrische schok.
Niet openen.
Bevat geen door gebruik te repareren onderdelen.
Door bevoegd servicepersoneel laten repareren.

⚠️ **ATTENZIONE**

Pericolo di scarica elettrica.
Non aprire.
Nessuna parte riparabile dall'utente.
Chiamare un servizio riparazioni qualificato.

⚠️ WARNING

This safety message means that you might get seriously hurt or killed if you open the product and expose yourself to hazardous voltage. NEVER remove the screwed on covers. ALWAYS refer service requirements to qualified service personnel.

⚠ تحذير ⚠

**⚠ CAUTION**

When the top cover or bypass deck of the ring binder is opened, be careful of your head. Otherwise, you may be injured getting bumped on your head. Please be especially careful when removing mishandled paper.

(GP-502)

⚠ WARNING

Electrical shock hazard. Disconnecting power from this section does not remove power from adjacent sections of the machine.

⚠ ATTENTION

Risque de secousse électrique. Couper le circuit électrique dans ce secteur ne met pas hors circuit les sections adjacentes de cette machine.

⚠ MUCHO CUIDADO

Riesgo de choque eléctrico. El desconectar la fuente de alimentación de esta sección no previene la desconexión de otras secciones contiguas a esta máquina.

⚠ WARNING

Elektroschockgefahr. Abschalten des Stroms von diesem Teil der Maschine unterbricht nicht den Strom von anliegenden Teilen der Maschine.

⚠ WARNING

This safety message means you could get an electrical shock because disconnecting power from this section does not cut off power from adjacent sections of the machine.

⚠ WARNING

This safety message means that you might get seriously hurt or killed if you open the product and expose yourself to hazardous voltage. NEVER remove the screws on covers. ALWAYS refer service requirements to qualified service personnel.

<p>⚠ ATTENTION</p> <p>Risque de secousse électrique. Ne pas ouvrir. Pas de pièces réparables par l'utilisateur. Entretien par personnel qualifié.</p>	<p>⚠ WARNING</p> <p>Electrical shock hazard. Do not open. No user serviceable parts inside. Refer servicing to qualified service personnel.</p>
<p>⚠ WARNING</p> <p>Spannungsführende Teile. Nicht öffnen. Entfallt keine vom Endverbraucher zu wartende Teile. Für Service bitte an qualifiziertes Service-Personal wenden.</p>	<p>⚠ MUCHO CUIDADO</p> <p>Riesgo de choque eléctrico. No abra. Adentro, no hay piezas reparables para el usuario. Mantenimiento solamente para personal calificado.</p>
<p>⚠ WAARSCHUWING</p> <p>Kans op elektrische schok. Niet openen. Bevat geen door gebruik te repareren onderdelen. Door bevoegd servicepersoneel laten repareren.</p>	<p>⚠ ATTENZIONE</p> <p>Pericolo di scarica elettrica. Non aprire. Nessuna parte riparabile dall'utente. Chiamare un servizio di riparazioni qualificato.</p>

(SD-506)

⚠ WARNING
⚠ WARNING
⚠ 警告

⚠ WARNING

Do not touch the edge of the trimmer blade. You get injured.

⚠ CAUTION

- **You may be burned or injured if you touch any area that you are advised not to touch by any caution label. Do not remove caution labels. If any caution label has come off or soiled and therefore the caution cannot be read, contact our service office.**

4.2 Warning indications on the boards

WARNING

- To avoid electric shock, after turning OFF the power switch, do not touch the DC power supply/1 unit for 15 minutes.
If the DC power supply unit is faulty, it may take time before its voltage drops sufficiently.
- To avoid electric shock, after turning OFF the power switch, do not touch the DC power supply/2 unit for 30 minutes.
If the DC power supply unit is faulty, it may take time before its voltage drops sufficiently.

⚠ WARNING

To avoid electric shock, after turning OFF the power switch, do not touch the DC power supply unit for 30 minutes. If the DC power supply unit is faulty, it may take time before its voltage drops sufficiently.

WARNING Do not touch power supply unit for 30 min. after shutting off the machine.
Electric Shock from Stored Charge on Capacitors!

Do not touch power supply unit for 30 min. after shutting off the machine.
Electric shock from stored charge on capacitors!

**⚠ WARNING**

To avoid electric shock, after turning OFF the power switch, do not touch the DC power supply unit for 15 minutes. If the DC power supply unit is faulty, it may take time before its voltage drops sufficiently.

WARNING Do not touch power supply unit for 15 min. after shutting off the machine.
Electric Shock from Stored Charge on Capacitors!

⚠ WARNING

- Do not open the cover for 50 minutes after turning OFF the power switch.

⚠ WARNING

There is a possibility of electrical shock caused by charging voltage.

(RU-509)

⚠ WARNING

Do not open the cover for 50 minutes after turning OFF the power switch. There is a possibility of electrical shock caused by charging voltage.

⚠ CAUTION

- You may be burned or injured if you touch any area that you are advised not to touch by any caution label. Do not remove caution labels. If any caution label has come off or soiled and therefore the caution cannot be read, contact our service office.

5. MEASURES TO TAKE IN CASE OF AN ACCIDENT

1. If an accident has occurred, the distributor who has been notified first must immediately take emergency measures to provide relief to affected persons and to prevent further damage.
2. If a report of a serious accident has been received from a customer, an on-site evaluation must be carried out quickly and KMBT must be notified.
3. To determine the cause of the accident, conditions and materials must be recorded through direct on-site checks, in accordance with instructions issued by KMBT.
4. For reports and measures concerning serious accidents, follow the regulations specified by every distributor.

B NOTATION OF THE CONTENTS

1. PRECAUTION ON HANDLING THIS MANUAL

Be sure to maintain the confidentiality of this manual.

Mishandling of this manual may make you face punishment according to the laws.

2. PRODUCT NAME

In this manual, each product is indicated as following names.

- | | |
|-------------------------------------|---------------------|
| (1) bizhub PRESS 1250/1250P/1052*1: | Copier or Main body |
| bizhub PRO 951*1: | Copier or Main body |
| Microsoft Windows Vista: | Windows Vista |
| Microsoft Windows 7: | Windows 7 |

*1 This Service Manual is also applicable to bizhub PRO 951, bizhub PRESS 1250/1250P/1052 and ineo 951/1250/1052.

3. TRADEMARK

3.1 TRADEMARKS OF OTHER COMPANIES

The indicated company and product names are the trademarks or registered trademarks of each company.

4. ELECTRICAL PARTS AND SIGNALS

Those listed by way of example below are not exhaustive, but only some instances among many.

Classification	Load symbol	Ex. of signal name	Description
Sensor	PS	IN	Sensor detection signal
		PS	
		Door PS1	
		SIG	
		102 PS	
Solenoid	SD	24V	Power to drive the solenoid
		DRV	Drive signal
		SOL	
Clutch	CL	24V	Power to drive the clutch
		DRV	Drive signal
		SOL	
Motor	M	24V	Power to drive the motor
		CONT	Drive signal
		DRV1	Drive signals of two kinds
		DRV2	
		D1	
		D2	
		_U	Drive signals (control signals) of three kinds
		_V	
		_W	
		DRV1	
		DRV2	
		DRV3	
		D1	Drive signals (control signals) of four kinds Motor, phases A and B control signals
		D2	
		D3	
		D4	
		DRV A	
		DRV \overline{A}	
		DRV B	
		DRV \overline{B}	
		A	
		/A	
		B	
		/B	
		AB	
		BB	
		CLK, PLL	PLL control signal
		LCK, Lock, LD	PLL lock signal
		FR	Forward/reverse rotation signal
		EM, Lock, LCK, LD	Motor lock abnormality
		BLK	Drive brake signal
		P/S	Power/stop
		S/S	Operating load start/stop signal
		SS	
		CW/CCW, F/R	Rotational direction switching signal
		ENB	Effective signal
		TEMP_ER	Motor temperature abnormality detection signal
Fan	FM	24V	Power to drive the fan motor
		CONT, DRIVE	Drive signal
		HL	Speed control signal (2 speeds)
		EM, Lock, LCK, FEM	Detection signal
Others		TH1.S, ANG	Analog signal
Ground		SG, S_GND, S_GND	Signal ground

Serial communication		PG, P.GND	Power ground
		DCD	Data carrier detection
		SIN	Serial input
		SOUT	Serial output
		DTR	Data terminal operation available
		GND	Signal ground (earth)
		DSR, DSET	Data set ready
		RTS	Transmission request signal
		CTS	Consent transmission signal
		RI	Ring indicator
		TXD	Serial transmission data
		RXD	Serial reception data

5. PAPER FEED DIRECTION

When the direction in which paper is fed is in parallel with the longer side of paper, the paper feed direction like this is referred to as the longitudinal feed.

And the paper feed direction that is perpendicular to the longitudinal feed is referred to as the transverse feed.

When specifying the longitudinal feed, "S (abbreviation for Short Edge Feeding)" is added to the paper size. For the transverse feed, no specific notation is employed.

However, when only the longitudinal feed is specified for one and the same paper size with no specification made for the transverse feed, "S" is not added even when being fed longitudinally.

<Example>

Paper size	Feed direction	Notation
A4	Transverse feed	A4
	Longitudinal feed	A4S
A3	Longitudinal feed	A3

C PRODUCT SPECIFICATIONS

1. bizhub PRESS 1250/1250P/1052

1.1 Type

Type	Console type (floor-mounted type)
Copying method	Indirect electrostatic method
Original stand	Fixed
Original alignment	Left rear standard
Photo conductor	OPC
Sensitizing method	LED print head (LPH) exposure method
Tray capacity	2 trays (1,500 sheets x 2, 80g/m ²) PF-703 (1,850 sheets x 2, 1,300 sheets x 1, 80g/m ²) *1 PF-706 (2,000 sheets x 3, 80g/m ²) *1

*1 PF-703 and PF-706 are optional.

1.2 Functions

Original	Sheet, book, solid object	
Max. original size	A3 or 11 x 17	
Paper size	Trays 1, 2	SRA3, A3, JISB4 *1, ISOB4 *2, SRA4S, A4, A4S, JISB5 *1, ISOB5 *2, B5S, A5, 12 x 18, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 8K *3, 16K *3, 16KS *3 Wide paper (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W) Custom (Max. 324mm x 463mm, Min. 182mm x 139mm) Tab paper (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2) *1 Default for North America *2 Default for Europe *3 For China/Taiwan only
	ADU	SRA3, A3, B4, ISOB4, SRA4S, A4, A4S, B5, ISOB5, B5S, A5, 12 x 18, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2, 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 8K, 16K, 16KS Wide paper (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W) Custom (Max. 324mm x 483mm, Min. 95mm x 133mm)
Paper weight	Trays 1, 2	40g/m ² to 300g/m ²
	PF-703/PF-706	40g/m ² to 350 g/m ²
	Duplex	40g/m ² to 300g/m ²
Magnification:	Fixed magnification	Inch: x 1.000, x 2.000, x 1.545, x 1.294, x 1.214, x 0.939, x 0.772, x 0.647, x 0.500 Metric: x 1.000, x 2.000, x 1.414, x 1.189, x 0.840, x 0.707, x 0.500
	Preset zoom setting	3 types
	Zoom magnification	x 0.250 to x 4.000 (at the step of 0.1%)
	Vertical magnification	x 0.250 to x 4.000 (at the step of 0.1%)
	Horizontal magnification	x 0.250 to x 4.000 (at the step of 0.1%)
Warm-up time	420 sec. or less	
First copy out time	PRESS1250	2.8 sec. or less
	PRESS1052	3.0 sec. or less
Continuous copy speed	PRESS1250/1250P	125 sheets/min. (A4)
	PRESS1052	105 sheets/min. (A4)
Continuous copy count	Up to 9,999 sheets	
Original density selection	Auto density selection, manual (9 steps), user density registration (2 types of settings can be registered)	
Resolution:	Scan	600dpi x 600dpi
	Write	1200dpi x 1200dpi
DRAM	768 MB	

HDD *1 *2	250 GB	
Interface section	RJ45 Ethernet x 1, Serial port (RS232-C) x 1, Serial port (USB TypeA x 4)	
Number of originals to be stored	10,000 sheets or more	
	Under the following conditions	Original : FAX#4CHART/A4 Density : Manual 5 Mode : Text/photo

*1 Removable when using RH-101 (optional).

*2 1 for standard equipment.

1.3 Paper Type

Type of paper	Main tray	PF-703	PF-706
Coated	○ *1	○ *2	○ *1 *3

*1 Paper can be fed in the humidity 60 % or less.

*2 Use of HT-505 is recommended in the humidity condition.

*3 When using PP-701

*4 Only the PF middle tray can feed paper. Paper feed direction is specified.

*5 Only the PF middle tray can feed paper. Quality is not guaranteed.

*6 Set direction is specified. Only for simplex.

*7 When EF-102 is used. Tray4 is recommended for the paper feed tray.

1.4 Recommended paper

1.4.1 Inch

Paper type	Product name	Recommendation *1
Bond	Domtar First Choice Multiuse (90 g/m ²)	Recommended paper A
	Domtar First Choice Cover & Card (176 g/m ²)	Recommended paper B
	Hammermill Tidal MP (75 g/m ²)	Recommended paper A
	Hammermill Fore MP (75 g/m ²)	Recommended paper A
	Hammermill Fore MP-colors (30% post-consumer fiber) (75 g/m ²)	Recommended paper A
	Xerox Digital Publishing Paper (68 g/m ²)	Recommended paper A
	Hammermill Color Copy Digital Cover Photo White (120 g/m ²)	Recommended paper A
	Boise X9 (60 g/m ²)	Recommended paper B
Recycled	Domtar Recycled Husky Xero Copy (75 g/m ²)	Recommended paper A
	Hammermill Great White Copy (30% Post-Consumer Fiber) (75 g/m ²)	Recommended paper A
	Boise ASPEN 100 Recycle (75 g/m ²)	Recommended paper A
Gloss	Smart Kromekote Laser High GlossC2S-Ultra Gloss Cast Coat(234.4 g/m ²)	Recommended paper B

	Carolina Digital C2S Cover (234 g/m ²)	Recommended paper B
Cover	Domtar First Choice Cover&Card (176 g/m ²)	Recommended paper B
Tab Paper	Xerox Business 90lb Index (90lb)	Recommended paper B
	Springhill Digital Index (Formerly known as Index Plus) (110lb)	Recommended paper B
Transparency	Folex X475 (92 g/m ² to 135 g/m ²) *2	Paper for original through check
Label	Avery 5160 (136 g/m ² to 216 g/m ²) *2	Paper for original through check
	Avery 5352 (136 g/m ² to 216 g/m ²) *2	Paper for original through check
NCR	Appleton NCR Paper Xero/Form II *2	Paper for original through check
Embossed2	strathmore grandee white (118 g/m ²)	Recommended paper B
	strathmore pastelle bright white (118 g/m ²)	Recommended paper B
	via linen bright white (104 g/m ²)	Recommended paper B
	via felt bright white i-tone (216 g/m ²)	Recommended paper B

*1 Recommended paper A: Evaluation standard paper for Japan, North America and Europe

Recommended paper B: Paper which can be fed (Reliability evaluation is not target). Long grain paper is recommended for 49 g/m² or less, and short grain paper is recommended for 217 g/m² or more.

Paper for original through check: Q zone is recommended

*2 Only for simplex

1.4.2 Metric

Paper type	Product name	Recommendation*1
Business	Clairefontaine Clairalfa White (80 g/m ²)	Recommended paper A
	Konicaminolta Original (80 g/m ²)	Recommended paper A

Original density selection	Auto density selection, manual (9 steps), user density registration (2 types of settings can be registered)	
Resolution:	Scan	600dpi x 600dpi
	Write	1200dpi x 1200dpi
DRAM	768 MB	
HDD *1 *2	250 GB	
Interface section	RJ45 Ethernet x 1, Serial port (RS232-C) x 1, Serial port (USB TypeA x 1)	

Number of originals to be stored	10,000 sheets or more	
	Under the following conditions	Original : FAX#4CHART/A4 Density : Manual 5 Mode : Text/photo

*1 Removable when using RH-101 (optional).

*2 1 for standard equipment.

2.3 Type of paper

Type of paper	Main tray	PF-706	LU-409/410
Fine	○	○	○
Plain	○	○	○
Book/News (216 g/m ² or less is recommended)	○	○	○
Embossed (216 g/m ² or less is recommended)	○	○	○
Blank Insert	○	○	○
Label Paper* ¹	×	○	○
OHP Film* ²	×	○	○
Tab paper* ³	○	○	○

*1 Only the LU tray or the PF-706 middle tray can feed paper. Paper feed direction is specified.

*2 Only the LU tray or the PF-706 middle tray can feed paper. Quality is not guaranteed.

*3 Set direction is specified. Only for simplex.

2.4 Recommended paper

2.4.1 Inch

Paper type	Product name	Recommendation* ¹
Bond	Domtar First Choice Multiuse (90 g/m ²)	Recommended paper A
	Domtar First Choice Cover & Card (176 g/m ²)	Recommended paper B
	Hammermill Tidal MP (75 g/m ²)	Recommended paper A
	Hammermill Fore MP (75 g/m ²)	Recommended paper A
	Hammermill Fore MP-colors (30% post-consumer fiber) (75 g/m ²)	Recommended paper A
	Xerox Digital Publishing Paper (68 g/m ²)	Recommended paper A
	Hammermill Color Copy Digital Cover Photo White (120 g/m ²)	Recommended paper A
	Boise X9 (60 g/m ²)	Recommended paper B
Recycled	Domtar Recycled Husky Xero Copy (75 g/m ²)	Recommended paper A
	Hammermill Great White Copy (30% Post-Consumer Fiber) (75 g/m ²)	Recommended paper A
	Boise ASPEN 100 Recycle (75 g/m ²)	Recommended paper A
Cover	Domtar First Choice Cover&Card (176 g/m ²)	Recommended paper B
Tab Paper	Xerox Business 90lb Index (90lb)	Recommended paper B
	Springhill Digital Index (Formerly known as Index Plus) (110lb)	Recommended paper B
Transparency	Folex X475 (92 g/m ² to 135 g/m ²) * ²	Paper for original through check
Label	Avery 5160 (136 g/m ² to 216 g/m ²) * ²	Paper for original through check
	Avery 5352 (136 g/m ² to 216 g/m ²) * ²	Paper for original through check
NCR	Appleton NCR Paper Xero/Form II * ²	Paper for original through check

*1 Recommended paper A: Evaluation standard paper for Japan, North America and Europe

Recommended paper B: Paper which can be fed (Reliability evaluation is not target). Long grain paper is recommended for 49 g/m² or less, and short grain paper is recommended for 217 g/m² or more.

Paper for original through check: Q zone is recommended

*2 Only for simplex

2.4.2 Metric

Paper type	Product name	Recommendation*1
Business	Clairefontaine Clairalfa Whilte (80 g/m ²)	Recommended paper A
	Konicaminolta Original (80 g/m ²)	Recommended paper A
	Konicaminolta Profi (80 g/m ²)	Recommended paper A
	Mondi IQ premium (80 g/m ²)	Recommended paper A
	Mondi BIO TOP 3 extra (80 g/m ²)	Recommended paper A
	Stora Enso Berga Superior (100 g/m ²)	Recommended paper A
	Mondi Color Copy (90 g/m ² , 120 g/m ²)	Recommended paper A
	Mondi Color Copy (200 g/m ² , 300 g/m ² , 350 g/m ²)	Recommended paper B
	Clairefontaine Clairmail (60 g/m ²)	Recommended paper A
	Konicaminolta Color + (90 g/m ²)	Recommended paper A
	Mondi MAESTRO supreme (60 g/m ²)	Recommended paper A
	Mondi MAESTRO supreme (160 g/m ²)	Recommended paper B
	Stora Enso 4CC (100 g/m ²)	Recommended paper A
	Stora Enso 4CC (220 g/m ² , 280 g/m ²)	Recommended paper B
	Xerox Colortech+ (280 g/m ²)	Recommended paper B
	Stora Enso Zoom Image (80 g/m ²)	Recommended paper A
	Mondi IQ Selection Smooth (160 g/m ²)	Recommended paper B
	Atlantic feinpost (50 g/m ²)	Paper for original through check
Eco-friendly	Mondi MAESTRO TRIOTEC TCF (80 g/m ²)	Recommended paper A
Recycled	Mondi NAUTILUS SuperWhite (80 g/m ²)	Recommended paper A
	Classic White (80 g/m ²)	Recommended paper A
Transparency	Folex X475 (92 g/m ² to 135 g/m ²) *2	Paper for original through check
Label	Avery L7169 (92 g/m ² to 135 g/m ²) *2	Paper for original through check
	Avery L7160 (136 g/m ² to 216 g/m ²) *2	Paper for original through check
Tab Paper	Konicaminolta Divider Cards (160 g/m ²)	Recommended paper B
NCR	Xerox Premium Digital (82 g/m ²) *2	Recommended paper B
	Carbonless Paper (83 g/m ²) *2	Recommended paper B

*1 Recommended paper A: Evaluation standard paper for Japan, North America and Europe

Recommended paper B: Paper which can be fed (Reliability evaluation is not target). Long grain paper I is recommended for 49 g/m² or less, and short grain paper is recommended for 217 g/m² or more.

Paper for original through check: Q zone is recommended

*2 Only for simplex

2.5 Materials

Parts name	Useful life	Name
Toner bottle	105,000 prints*1	TN015
Drum	750,000 prints or 190 hours	DR012
Developer	750,000 prints or 190 hours	DV011
Waste toner box	750,000 prints*1	A4EUR75V##

*1 A4 original at 4 to 5% coverage.

2.6 Maintenance

Maintenance cycle	Every 750,000 prints		
Ave. number of prints	100,000 to 500,000 per month		
Max. number of print	Q zone*1	1,500,000 per month	50,000 per day
	B, C zone*1	1,000,000 per month	35,000 per day
	A zone*1	300,000 per month	10,000 per day

*1 The zones mean the temperature and humidity range indicated in the following graph.

2.7 Machine data

Power source	Inch: Single-phase three-wire AC 208V to 240V -10% to +10%, 16A, 60Hz Metric: Single-phase three-wire AC 230V -14% to +10.6%, 15A, 50Hz/60Hz	
Maximum power consumption	Inch: 3,840W or less (AC208V to 240V, full option) Metric: 3,600W or less (AC220V to 240V, full option)	
Weight	Approx. 364kg (including DF)	
Dimensions	PRO951 itself	990 (W) x 910 (D*1) x 1,234 (H*2)mm
	PRO951+LU-409+FS-532	2,375 (W) x 910 (D*1) x 1,454 (H*3) mm

*1 Including the rear duct

*2 Excluding the control panel.

*3 The height from the bottom to the top of the operation panel.

2.8 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

2.9 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

3. DF-615 /616

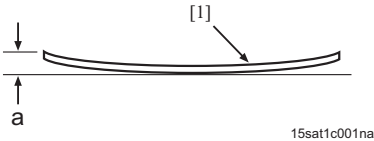

3.1 Type

Type	Sheet-through type automatic document feeder
------	--

3.2 Functions

Paper size	A3, B4, ISOB4, A4, A4S, B5, ISOB5, B5S, ISOB5S, A5 11 x 17, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 8 ¹ / ₂ x 5 ¹ / ₂ , 8 ¹ / ₂ x 13, 8 ¹ / ₄ x 13, 8 ¹ / ₈ x 13 ¹ / ₄ , 8 x 13, 8K* ¹ , 16K* ¹ , 16KS* ¹ Maximum original size: 297mm x 431.8mm Minimum original size: 128mm x 139.7mm *1 For China/Taiwan only	
Original stacking capacity	100 sheets, max. (80g/m ²)	
Original read speed (A4 size)	DF-615	Single sided copy mode: 105 sheets/min.
		Double sided copy mode: 65 sheets/min.
	DF-616	Single sided copy mode: 96sheets/min.
		Double sided copy mode: 68 sheets/min.
Original feed layout	Set with the front side up, at center as standard	
Original image read position	Dedicated slit glass section	
Resolution	600dpi	

3.3 Type of paper

Type of paper	Plain paper of 50g/m ² to 130g/m ² In the single-sided copy mode, however, plain paper of 131g/m ² to 200g/m ² is also available in the single feed mode.	
Paper curl amount	Up to 10mm with 5 originals overlapped one another  a Curing: 10 mm or less [1] Original	

3.4 Originals other than the paper feed and throughput can be guaranteed

With the following originals, no severe problems are found such as frequent jams and major damage to the originals, although it is not possible to obtain a numeric value indicating reliability that can be specified in product guarantee terms

Recycled paper, straw paper, heat-sensitive paper, originals fed in the mixing of perforated original mode, Fine paper of 35g/m² to 50g/m², costume size originals (such as CF originals), coated paper, originals with a rough surface (such as letterhead), folded originals (Z-Folded or folded in 2)

3.5 Originals not allowed to be fed

The following originals can not be used

OHP film, blueprint master, label paper, offset master, bonded original, Fine paper of 35g/m² to 201g/m²

3.6 Combination of mixed originals

Combinations of the same and different size originals is available. The following table shows the available combination of mixed originals.

Metric: Europe

Other originals	Reference originals (original with a maximum width)						
	A3	A4	B4	B5	A4S	A5	B5S

□ : same size, ○ : :same series, ⊗ : different series, ✕: no mixed loading,
—: not supported

3.7 Machine data

Power source	24/5.1VDC±10% (supplied from the main body)
Maximum power consumption	210W or less
Dimensions	650 (W) x 570 (D) x 170 (H) mm (excluding the original feed tray)
Weight	Approx. 22kg

3.8 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

3.9 Note regarding the specifications

- Note
- The information herein may be subject to change for improvement without notice.

4. PF-703

4.1 Type

Type	Front loading type suction method 3-tray paper feeder
------	---

4.2 Functions

Number of trays	3 trays (All trays universal)
Maximum tray capacity	5,000 sheets (80g/m ² standard paper) Tray /1 : 1,300 sheets Tray /2, /3 : 1,850 sheets

4.3 Type of paper

Paper size	SRA3, A3, JISB4 *1, ISOB4 *2, SRA4, SRA4S, A4, A4S, JISB5 *1, ISOB5 *2, JISB5S *1, ISOB5S *2, A5 8K *3, 16K *3, 16KS *3 12 x 18, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 Wide paper (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W, Max. 324mm x 463mm) Custom size paper (Max. 324mm x 483mm, Min. 182mm x 133mm) *4 Tab paper (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2) *5 Envelope (Max. 245mm x 375mm, Min. 100mm x 135mm) *6	
Applicable paper	Plain, Fine, Coated, Recycled paper, PrePrinted, Book/News, Embossed, Blank Insert, Embossed2, Envelope *7	
Paper weight	Tray /1, /3	40 to 300g/m ²
	Tray /2	40 to 350g/m ²

*1 Default for North America

*2 Default for Europe

*3 For China/Taiwan only

*4 When using small size guide : Min. 95mm x 133mm

*5 Tab paper is unavailable for PI-PFU.

*6 Paper feed available only from tray /4. The assist guide is required for some size of paper.

*7 When EF-102 is installed.

4.4 Machine data

Power source	36/24/12/5VDC, 200VAC (supplied both from the main body)
Maximum power consumption *1	DC : 90W or less AC : 100W or less
Weight	186kg
Dimensions	871.5 (W) x 780 (D) x 1038 (H) mm

*1 Excluding the power consumption of HT-505. (Power consumption AC of HT-505: 580W or less)

4.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

4.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

5. HT-505

5.1 Type

Type	Fan heater type dehumidifier
------	------------------------------

5.2 Machine data

Power source	24/5VDC, 200V to 240VAC (supplied from PF)
Maximum power consumption	DC: 6W or less, AC: 580W or less
Dimensions	Dehumidifier fan heater unit: 197 (W) x 82 (D) x 293 (H) mm Power source unit: 121 (W) x 80 (D) x 160 (H) mm
Weight	Dehumidifier fan heater unit: 1.5kg (per unit) Power supply unit: 0.9 kg

5.3 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

5.4 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

6. FA-501

6.1 Type

Type	Paper conveyance unit for PI with multi-feed detection
------	--

6.2 Type of paper

Paper size	Maximum 324mm x 463mm, minimum 95mm x 133mm
Applicable paper	Plain, Fine, Coat, recycled paper, PrePrinted, Book/News, Embossed, Blank Insert, Embossed2
Paper weight	40 to 350g/m ²

6.3 Machine data

Power source	Same as the PF.
Maximum power consumption	36W or less
Dimensions	Conveyance section 150 (W) x 580 (D) x 200 (H) mm External parts 575mm x 608mm, 575mm x 375mm
Weight	9kg

6.4 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

6.5 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

7. PF-706

7.1 Type

Type	Front loading type 3-tray paper feeder
------	--

7.2 Functions

Number of trays	3 trays (All trays universal)
Maximum tray capacity	6,000 sheets (80g/m ² standard paper) = 2,000 sheets x 3 trays

7.3 Type of paper

Paper size	SRA3, A3, JISB4 *1, ISOB4 *2, SRA4S, A4, A4S, JISB5 *1, ISOB5 *2, JISB5S *1, ISOB5S *2, A5, 8K *3, 16K *3, 16KS *3 12 x 18, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 Wide paper (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W, Max. 324mm x 463mm) Custom size paper (Max. 324mm x 463mm, Min. 182mm x 139mm) *4 Tab paper (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2) *1 Default for North America *2 Default for Europe *3 For China/Taiwan only *4 When using small size guide : Min. 95mm x 139mm	
Applicable paper	Plain, Fine, Coated *5, Recycled paper, PrePrinted, Book/News, Embossed, Inserting sheet (not printed), Embossed2 *6 *5 Available with environmental humidity 60% or less *6 Paper feed available only from tray /5	
Paper weight	Tray /1, /3	40g/m ² to 300g/m ²
	Tray /2	40g/m ² to 350 g/m ²

7.4 Machine data

Power source	36/24/12/5VDC, 200VAC to 240VAC (supplied both from the main body or PF703)
Maximum power consumption	110W or less
Weight	Approx. 150kg
Dimensions	809 (W) x 780 (D) x 1038 (H) mm

7.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

7.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

8. PP-701

8.1 Type

Type	Overlay printing enhancement kit for PF
------	---

8.2 Machine data

Power source	24VDC (supplied from PF)
Maximum power consumption	19W or less
Dimensions	125 (W) x 90 (D) x 175 (H) mm
Weight	Approx. 2kg

8.3 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

8.4 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

9. LU-409/410

9.1 Type

Type	Side mount type large volume paper feed tray
------	--

9.2 Functions

Maximum tray capacity	LU-409	5000 sheets (64g/m ² for paper)
	LU-410	4500 sheets (64g/m ² for paper)

9.3 Type of paper

Paper size	LU-409	A4, B5, ISOB5, 8 1/2 x 11, 9 x 11, 8K Tab Paper, Wide paper (Max. 314mm x 229mm) Custom (Max. 314mm x 229mm, Min. 250mm x 176mm)
	LU-410	A3, B4, ISOB4, A4, A4S, SRA4S, 16K, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 Tab Paper, Wide paper (Max. 324mm x 483mm), Custom (Max. 324mm x 483mm, Min. 203mm x 195mm)

9.4 Machine data

Power source	DC24/5V, 200VAC to 240VAC (supplied from the main body)	
Maximum power consumption	LU-409	DC70W or less, AC13W or less
	LU-410	DC70W or less, AC13W or less
Weight	LU-409	Approx. 30kg
	LU-410	Approx. 43kg
Dimensions	LU-409	436 (W) x 639 (D) x 709 (H) mm
	LU-410	700 (W) x 639 (D) x 715 (H) mm

9.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

9.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

10. RH-101

10.1 Type

Type	Removable HDD kit
------	-------------------

10.2 Functions

Functions	When the main power is OFF, the inner case and the hard disk can be removed/inserted from RH-101.
	When RH-101 is used, do NOT use the security mode of the main body.

10.3 Machine data

Power source	12/5VDC (supplied from the main body)
Maximum power consumption	5W or less (built-in HDD power: 70W or less)
Weight	Approx. 2.4kg
Dimensions	150 (W) x 260 (D) x 110 (H) mm

10.4 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80% RH (with no condensation)

10.5 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

11. HD-511

11.1 Type

Type	Inner HDD kit
------	---------------

11.2 Functions

Functions	Removable HDD kit (RH-101)
-----------	----------------------------

11.3 Machine data

Power source	12/5VDC (supplied from the main body)
Power consumption	70W or less
Weight	Approx. 0.85kg
Dimensions	186 (W) x 118 (D) x 37 (H) mm

11.4 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80% RH (with no condensation)

11.5 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

12. EF-102

12.1 Type

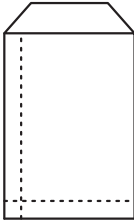

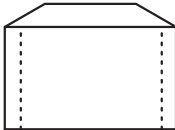

Type	Envelope kit
Configuration	Fusing unit
	Paper feed assist part

12.2 Functions

Paper feed method	Equipping the dedicated fusing unit and the paper feed assist part enables envelope feed.	
Document alignment	Center	
Paper feed mode	Only face up exit in the simplex mode. Refeeding papers are not assured.	
Paper feed direction	Open the flap and feed paper from the opposite side of the flap.	
Paper feed specification	Paper feed tray	Can be fed only from the tray4 of PF-703. Paper feed auxiliary part is required according to the shape of envelope.
	Paper feed tray load capacity	150 sheets
Finishing specification*1	Output Tray	Can be output only to the main tray of FS-532.
	Output tray load capacity	150 sheets
	Finishing options which can be connected	RU-510, FS-532, SD-510, PK-522, PI-502, FD-503, GP-501, GP-502

*1 Shift, punch, and mixed loading are not allowed. Alignment is not guaranteed.

12.3 Type of paper

Weight of envelope	70g/m ² to 100g/m ²		
Envelope size	Length in the main scan direction	100mm to 245mm *Paper feed assist parts must be connected. *When the envelope is between 120mm and 135mm, the envelope is not assured because paper feed assist parts are not available.	
	Length in the sub scan direction	135mm to 375mm	
Recommended envelope* ¹	Inch	6 x 9 1/2	241mm x 152mm
		5 3/4 x 8 7/8	226mm x 146mm
	Metric	C5	162mm x 229mm
		C5/C6	114mm x 229mm
Single side seam and double side seam are recommended.			
<div><div></div><div></div></div>			
<div><div>[1] Single side seam</div><div>[2] Double side seam</div></div>			
Envelope not allowed to use	Envelopes with double-stick tape or release coated paper on the flap. The envelope with the film window.		

*1 The seal area is not assured

12.4 Recommended paper

12.4.1 Inch

Size	Maker	Product name	Seam method	Recommendation
------	-------	--------------	-------------	----------------

6 x 9 1/2	Western States Sulfite	7059 white (93 g/m ²)	Double side seam	Evaluation standard paper
5 3/4 x 8 7/8	Western States Sulfite	5214 white (93 g/m ²)	Double side seam	Recommended paper
4 1/8 x 9 1/2	Supremex	1000440 (100 g/m ²)	Double side seam	Recommended paper

12.4.2 Metric

Size	Maker	Product name	Seam method	Recommendation
C5 162mm x 229mm	ELCO	32486 (100 g/m ²)	Double side seam	Evaluation standard paper
C5/C6 114mm x 229mm	GOESSLER	10355 (100 g/m ²)	Double side seam	Recommended paper
105mm x 215mm	GOESSLER	10030 (100 g/m ²)	Double side seam	Recommended paper

12.5 Machine data

Power source	5VDC, 200VAC (supplied from the main body)
Maximum power consumption	2500W or less
Dimensions	Fusing unit: 170 (W) x 685 (D) x 230 (H) mm
Weight	Fusing unit: Approx. 17kg Paper feed guide member: Approx. 1kg Rear cover: Approx. 0.5kg

12.6 Operating environment

Temperature	18°C to 23°C
Humidity	40% to 60%RH (with no condensation)

12.7 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

13. RU-509

13.1 Type

Type	Relay conveyance device with paper cooling/de-curler function
------	---

13.2 Functions

De-curler conveyance mode	Reduces paper curl and conveys at an accelerating rate with post treatment linear velocity.
In the straight conveyance mode	Feed without the de-curl process and conveys at an accelerating rate with post treatment linear velocity.
Humidifier conveyance mode	Executes humidification of HM-102 (option) and conveys at an accelerating rate with post treatment linear velocity.
Output paper density adjustment mode ^{*1}	Measures the color density of the density patch printed on paper and feeds back to the image stabilization control of the main body.

^{*1} C7000/C7000P/C70hc/C6000 only.

13.3 Type of paper

Paper size	SRA3, A3, B4, ISOB4, SRA4 ^{*1} , SRA4S, A4, A4S, B5, ISOB5, B5S, ISOB5S ^{*1} , A5, A5S ^{*1} , B6S ^{*1} , ISOB6S ^{*1} , A6S ^{*1} , Postcard 13 x 19 ^{*1} , 12 x 18, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2 ^{*1} , 5 1/2 x 8 1/2S 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 8K, 16K, 16KS Wide paper ^{*2} (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W, Max. 324mm x 463mm) Tab paper ^{*3} (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2) Custom size paper Minimum 100mm x 148mm, Maximum 330mm x 487mm ^{*1} Minimum 100mm x 148mm, Maximum 330mm x 463mm ^{*2}
Type of paper	Same as the main body.
Paper weight	64 g/m ² to 300 g/m ² ^{*1} , 40 g/m ² to 350 g/m ² ^{*2}
Allowed curl	60mm or less

^{*1} C7000/C7000P/C70hc/C6000 only.

^{*2} 1250/1250P/1052 only.

^{*3} For C7000/C7000P/C70hc/C6000, A4, 8 1/2 x 11 only.

13.4 Machine data

Power source	100VAC (Japan), 120VAC (North America), 220VAC to 240VAC (Europe)/5VDC (supplied from the main body)
Maximum power consumption	700W or less
Dimensions	410 (W) x 735 (D) x 1,020 (H) mm
Weight	Approx. 60kg

13.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

13.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

14. HM-102

14.1 Type

Type	Paper humidifier kit
------	----------------------

14.2 Functions

Functions	Humidifies the both sides of paper to adjust curling.
Tank capacity	20L (equivalent to approx. 100,000 copies)

14.3 Type of paper

Paper size	SRA3, A3, B4, ISOB4, SRA4 ^{*1} , SRA4S, A4, A4S, B5, ISOB5, B5S, ISOB5S ^{*1} , A5, A5S ^{*1} , B6S ^{*1} , ISOB6S ^{*1} , A6S ^{*1} , Postcard 13 x 19 ^{*1} , 12 x 18, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2 ^{*2} , 5 1/2 x 8 1/2S 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 8K, 16K, 16KS Wide paper ^{*2} (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W, Max. 324mm x 463mm) Tab paper ^{*3} (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2) Custom paper (Max. 330 x 487mm, Min. 100 x 148mm) Custom size paper Minimum 100mm x 148mm, Maximum 330mm x 487mm ^{*1} Minimum 100mm x 148mm, Maximum 330mm x 463mm ^{*2}
Type of paper	Same as the main body.
Paper weight	64 to 300g/m ² ^{*1} ^{*4} , 50 to 350g/m ² ^{*2} ^{*4}

^{*1} C7000/C7000P/C70hc/C6000 only

^{*2} 1250/1250P/1052 only

^{*3} For C7000/C7000P/C70hc/C6000, A4, 8 1/2 x 11 only

^{*4} For Humidifier ON mode, Envelope or Coated, PrePrinted, Blank Insert Sheet, Embossed, and Embossed2 with the weight under 135 g/m² or less cannot be used.

14.4 Machine data

Power source	24/5VDC (supplied from RU-509)
Dimensions	Humidifier section: 194 (W) x 492 (D) x 83 (H) mm Water feed tank section: 339 (W) x 646 (D) x 246 (H) mm
Weight	Approx. 30kg

14.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

14.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

15. RU-510

15.1 Type

Type	Paper conveyance unit with paper overlap and reverse functions
------	--

15.2 Functions

Double sheets reverse/exit conveyance mode ^{*1}	Reverses 2 sheets of paper exited from the main body, PI-PFU or GP-501 and conveys to finishing unit.
Single sheet reverse/exit conveyance mode	Reverses a single sheet of paper exited from the main body, PI-PFU or GP-501 and conveys to finishing unit.
Straight conveyance mode	Conveys papers exited from the main body, PI-PFU or GP-501 to finishing unit without any process.

^{*1} 1250/1250P only

15.3 Paper type

Paper size	SRA3, A3, JISB4 ^{*1} , ISOB4 ^{*2} , SRA4 ^{*3} , SRA4S, A4, A4S, JISB5 ^{*1} , ISOB5 ^{*2} , JISB5S ^{*1} , ISOB5S ^{*2} , A5, A5S ^{*3} , A6S ^{*3} 13 x 19 ^{*3} , 12 x 18, 11 x 17, 9 x 11, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 5 ¹ / ₂ x 8 ¹ / ₂ ^{*3} , 8 ¹ / ₂ x 13, 8 ¹ / ₄ x 13, 8 ¹ / ₈ x 13 ¹ / ₄ , 8 x 13 8K ^{*4} , 16K ^{*4} , 16KS ^{*4} Wide paper (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 ¹ / ₂ x 11W, 8 ¹ / ₂ x 11SW, 5 ¹ / ₂ x 8 ¹ / ₂ W, Max. 331mm x 488mm ^{*5}) Custom size paper (Max. 331mm x 488mm ^{*5} , Min. 95mm x 133mm ^{*6}) Tab paper (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 5 ¹ / ₂ x 8 ¹ / ₂ , Max. 331mm x 463mm)	
Paper type	Plain, Fine, Coated, Tab Paper, OHP Film, Label Paper, PrePrinted, Blank Insert, Embossed2, Book/News, Embossed, Envelope: same as the main body.	
Paper weight	40g/ m ² to 350g/ m ²	
	2 pages reverse/exit conveyance mode ^{*7}	40g/ m ² to 216g/ m ²

^{*1} Default for North America

^{*2} Default for Europe

^{*3} Except for 1250/1250P/1052

^{*4} For China/Taiwan only

^{*5} 1250/1250P/1052: 324mm x 463mm

^{*6} 1250/1250P/1052: 139mm x 182mm

^{*7} 1250/1250P only

15.4 Machine data

Power source	24/5V DC (supplied from the previous device)
Maximum power consumption	79VA or less
Dimensions	410 (W) x 723 (D) x 1020 (H) mm
Weight	Approx. 35 kg

15.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

15.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

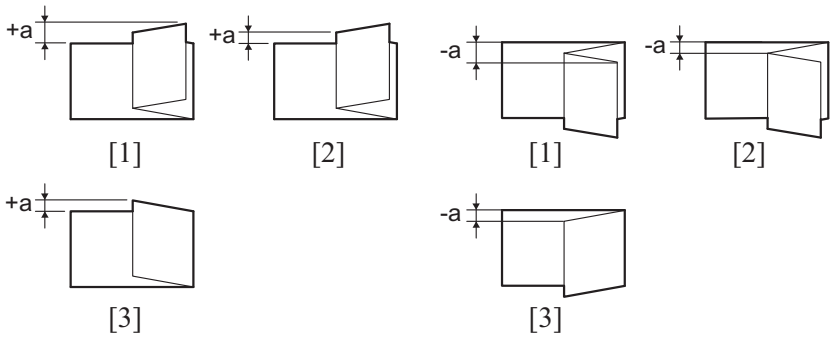

16. ZU-608

16.1 Type

Type	Z-folding multi punching device
------	---------------------------------

16.2 Functions

Punch	Punching method	Reciprocal punching method (punching each paper)																					
	Holes	Inch area: 2-Holes/3-Holes (switched automatically) Metric area: 2-Holes/4-Holes (switched automatically)

Folding precision	 <p> a: $\pm 2\text{mm}$ or less [1] 1st folding skew [2] 2nd folding skew [3] Folding ($8\frac{1}{2} \times 14$ only) </p>
-------------------	---

16.3 Type of paper

No punch mode	Same as the main body		
Punch mode	Paper size	2 holes	A3, B4, ISOB4, SRA4S, A4, A4S, B5, ISOB5, B5S, A5, A5S, 11×17, 9×11, 8 1/2×14, 8 1/2×11, 8 1/2×11S, 5 1/2×8 1/2 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 8K, 16K, 16KS
		3 holes	A3, B4, A4, 11×17, 8 1/2×11, 8K, 16K
		4 holes	A3, B4, A4, 11×17, 8 1/2×11, 8K, 16K
	Paper Type	60 to 91 g/m ² of Plain and Fine Special paper is not guaranteed. The punching of label paper, tab paper, OHP paper, blueprint master and binding-holed paper are not allowed.	
Z-Fold mode	Paper size	A3 , B4 11 x 17, 8 1/2 x 14 8K	
	Paper Type	60 to 91 g/m ² of Plain and Fine Special paper is not guaranteed. The punching of label paper, tab paper, OHP paper, blueprint master and binding-holed paper are not allowed.	
Paper curl amount			
	a	Excluding the OHP paper: Amount of curl: 15 mm or less OHP paper: Amount of curl: 3 mm or less	

16.4 Machine data

Power source	100 to 240 VAC (Automatic switching)
	5VDC (supplied from the main body)
Maximum power consumption	120W or less
Dimensions	169 (W) x 660 (D) x 930 (H) mm
Weight	Approx. 38kg

16.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

16.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

17. FS-532

17.1 Type

Type	Staple-cut type multi staple device
------	-------------------------------------

17.2 Functions

(1) Functions

Sort/group mode
Offset Sort/offset group mode
Offset staple mode
Staple mode

(2) Staple sheet

- Combination condition of the paper type/the paper width (in the sub scan direction)/the number of sheets for every range of paper weight

Paper weight (g/m ²)	Number of staple sheets						
	Plain		Fine			Plain paper / except Fine	
	Less than 400mm	400mm or more	320mm or less	321mm to 399mm	400mm or more	Less than 400mm	400mm or more
49 to 49	-	-	-	-	-	-	-
50 to 61	100	50	50	20	-	35	35
62 to 74	100	50	50	20	-	35	35
75 to 80	100 ^{*1}	50	30	30	30	35	35
81 to 91	60 ^{*1}	50	30	30	30	35	35
92 to 135	50	50	30	30	30	30	30
136 to 162	40	40	30	30	30	25	25
163 to 216	25	25	25	25	25	20	20
217 to 244	25	25	25	25	25	15	15
245 to 300	10	10	10	10	10	10	10
301 to 350	-	-	-	-	-	-	-

*1 For 1250/1250P/1052/951, the maximum number of sheets that the machine can staple differs depending on the paper weight.

(3) Staple position

Staple position	1 in the back (parallel/45 degrees), 1 in the front (parallel), 2 in center (pitch: 120mm, 140mm and 165mm)
-----------------	---

(4) Maximum tray capacity

(a) Sort/group mode

Main tray	The stacked height is detected by the main tray quarter position sensor (PS17), the main tray middle position sensor (PS18), the 4000 sheets sensor (PS19) and the 3000 sheets sensor (PS16).			
	Measure of paper full detection (Excluding Z-folding/center folding)	When SD-510 is not installed (Paper weight 72g/m ² to 81g/m ²)	Paper length	Sheet
			320mm or more	2000 sheets
			250mm to 319mm	4200 sheets
			249mm or less	750 sheets
		When SD-510 is installed (Paper weight 72g/m ² to 81g/m ²)	Paper length	Sheet
			320mm or more	2000 sheets
			250mm to 319mm	3000 sheets
			249mm or less	750 sheets
	Measure of paper full detection (Z-folding/center folding)	Z-folding (Paper weight 130g/m ² or less)	20 sheets*1	
Center folding (Paper weight 130g/m ² or less)		20 sheets*1		
Sub tray	The stacked height is detected by the sub tray paper full sensor (PS9).			
	Measure of paper full detection	Excluding Z-folding/center folding (Plain paper 80g/m ²)	300 sheets	
		Z-Folding	20 sheets	
		Center folding	40 sheets	

*1 20 sheets, 30 sheets, 40 sheets, 50 sheets can be set by switching DIPSW24-4 and DIPSW24-5.

(b) Offset Sort/offset group mode

Main tray	The stacked height is detected by the main tray quarter position sensor (PS17), the main tray middle position sensor (PS18), the 4000 sheets sensor (PS19) and the 3000 sheets sensor (PS16).			
	Measure of paper full detection (Excluding Z-folding/center folding)	When SD-510 is installed/not installed (Paper weight 72g/m ² to 81g/m ²)	Paper length	Sheet
			320mm or more	1500 sheets
			250mm to 319mm	1500 sheets
			249mm or less	750 sheets
	Measure of paper full detection (Z-folding/center folding)	Z-folding (Paper weight 130g/m ² or less)	20 sheets*1	
		Center folding (Paper weight 130g/m ² or less)	20 sheets*1	

*1 20 sheets, 30 sheets, 40 sheets, 50 sheets can be set by switching DIPSW24-4 and DIPSW24-5.

(c) Staple mode

Main tray	The stacked height is detected by the main tray quarter position sensor (PS17), the main tray middle position sensor (PS18), the 4000 sheets sensor (PS19) and the 3000 sheets sensor (PS16).			
	Measure of paper full detection	When SD-510 is installed/not installed	2 to 9 sheets (Paper length: 182mm to 364mm)	150 sets
			2 to 9 sheets (Paper length: except for 182mm to 364mm)	75 sets
			10 to 20 sheets	50 sets
			21 to 30 sheets	30 sets
			31 to 40 sheets	25 sets
			41 to 50 sheets	20 sets
			51 to 60 sheets	15 sets
			61 to 100 sheets	10 sets

17.3 Type of paper**(1) Sort/group mode/offset Sort/offset group mode**

Paper size	SRA3, SRA4, A3, B4, ISOB4, SRA4S, A4, A4S, B5, ISOB5, B5S, A5, ISOB5S, A5S, B6S* ⁴ , A6S* ⁴ 13 x 19, 12 x 18, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 7 1/4 x 10 1/2, 8 1/2 x 11S, 5 1/2 x 8 1/2 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13, 7 1/4 x 10 1/2S, 5 1/2 x 8 1/2S* ⁴ 8K, 16K, 16KS Wide paper (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W, Max. 324mm x 488mm* ¹) Custom size paper (Max. 331mm x 488mm* ¹ , Min. 95mm x 133mm* ²) Tab paper (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2, Max. 324mm x 483mm* ¹) * ³
Applicable paper	Plain, Fine, Color, Coated, PrePrinted, Book/News, Envelope* ⁴ , Embossed, Embossed2, Tab Paper (same as the main body)
Paper weight	50g/m ² to 350 g/m ²

*1 1250/1250P/1052/951+LU-410: 324mm x 483mm (The machines except for LU-410 conform to each product specification)

*2 1250/1250P/1052/951+PF-706: 95mm x 139mm (The machines except for PF-706 conform to each product specification)

*3 Operation of paper exit with tab area at the trail edge side is not warranty.

*4 Offset Sort/Offset group mode cannot be used.

(2) Staple mode

Paper size* ¹	SRA3, SRA4, A3, B4, ISOB4, SRA4S, A4, A4S, B5, ISOB5, A5, 13 x 19, 12 x 18, 11 x 17, 9 x 11, 8 1/2 x 14, 8 1/2 x 11, 7 1/4 x 10 1/2, 8 1/2 x 11S, 5 1/2 x 8 1/2 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 8K, 16K Wide paper (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W, Max. 331mm x 488mm* ¹) Custom size paper (Max. 324mm x 488mm* ^{1,2} , Min. 120mm x 240mm* ³) Tab paper (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2, Max. 324 mm x 488 mm* ¹) * ⁴
Applicable paper	Plain, Fine, Color, Coated, PrePrinted, Book/News, Embossed, Embossed2, Tab Paper (same as the main body)
Paper weight	50g/m ² to 300g/m ²

- * Z-folding staple: Maximum 305mm x 229mm, minimum 210mm x 210mm
- *1 1250/1250P/1052/951+LU-410: 324mm x 483mm (The machines except for LU-410 conform to each product specification)
- *2 Rear corner parallel staple: Maximum 320mm x 483mm
- *3 1250/1250P/1052/951+PF-706: 120mm x 240mm (The machines except for PF-706 conform to each product specification)
- *4 Operation of paper exit with tab area at the trail edge side is not warranty.

17.3.1 Allowable amount of curling

Paper curl amount		
	The amount is measured with 5 papers overlapped after printed	
	a	Excluding the OHP paper: Amount of curl: 15 mm or less OHP paper: Amount of curl: 3 mm or less

17.4 Machine data

Power source	24VDC±10% (supplied from the main body)
Maximum power consumption	144W or less
Dimensions	With the main tray: 798 (W) x 723 (D) x 1070 (H) mm Without the main tray: 544 (W) x 723 (D) x 1070 (H) mm
Weight	Approx. 74kg

17.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

17.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

18. SD-510

18.1 Type

Type	Saddle stitching unit with center folding and tri-folding
------	---

18.2 Functions

(1) Functions

Saddle stitching mode	Exits paper to the output tray after being saddle stitched.
Half-Fold mode	Exits paper to the output tray after being center folded on 1 or more sheets of paper.
Tri-folding mode	Exits paper to the output tray after being tri-folded on 1 or more sheets of paper.
Paper exit	Paper conveyance by the belt conveyor

(2) Maximum tray capacity

Folding exit tray	Large-size paper (sub-scanning direction length: 330mm or longer)	Center folding	1 to 5 sheets	35 copies*1
		Folding & Stapling	2 to 5 sheets	35 copies*1
			6 to 10 sheets	23 sheets*2
			11 to 20 sheets	15 copies*3
			20 to 25 sheets	15 copies*3
	Small-size paper: (sub-scanning direction length: shorter than 330mm)	Center folding	1 to 5 sheets	35 copies*1
		Folding & Stapling	2 to 5 sheets	35 copies*1
			6 to 10 sheets	25 copies*2
			11 to 20 sheets	15 copies*3
			20 to 25 sheets	15 copies*3
		Tri-Fold	1 sheet	50 copies
			2 sheets	40 copies
			3 sheets	30 copies

*1 20 sheets when 92g/m² or heavier paper is used for inside paper or cover, or the paper is fed from PI-502.

*2 15 sheets when 92g/m² or heavier paper is used for cover, or the paper is fed from PI-502.

*3 10 sheets when 92g/m² or heavier paper is used for cover, or the paper is fed from PI-502.

18.3 Type of paper

(1) Saddle stitching mode

Paper size	SRA3, A3, B4, ISOB4, SRA4S, A4S, B5S, ISOB5S 13 x 19, 12 x 18, 11 x 17, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11S 8 ¹ / ₂ x 13, 8 ¹ / ₄ x 13, 8 ¹ / ₈ x 13 ¹ / ₄ , 8 x 13, 7 ¹ / ₄ x 10 ¹ / ₂ S 8K, 16KS Wide paper (A3W, A4SW, B4W, 12 x 18W, 11 x 17W, 8 ¹ / ₂ x 11SW, Max. 331mm x 488mm* ₁) Custom size paper (Max. 331mm x 488mm* ₁ , Min. 120mm x 240mm* ₂)		
Applicable paper	Plain, Fine, Color, Coated, PrePrinted, Book/News, Embossed, Embossed2 (same as the main body)		
Paper weight	Inside paper: 50g/m ² to 216g/m ² Cover: 50g/m ² to 300g/m ²		
Maximum saddle stitching sheets	Weight	Sheet	
		Paper width is 279.4mm or longer in the sub scan direction.	Paper width is shorter than 279.4mm in the sub scan direction.
	40g/m ² to 49g/m ²	-	-
	50g/m ² to 61g/m ²	25 sheets	-
	62g/m ² to 74g/m ²	20 sheets	-
	75g/m ² to 80g/m ²	20 sheets	10 sheets
	81g/m ² to 91g/m ²	16 sheets	10 sheets
	92g/m ² to 105g/m ²	5 sheets	5 sheets
	106g/m ² to 135 g/m ²	5 sheets	5 sheets
	136g/m ² to 162g/m ²	5 sheets	5 sheets
	163g/m ² to 216g/m ²	5 sheets	5 sheets
	217g/m ² to 244g/m ²	Cover only	-
	245g/m ² to 300g/m ²	Cover only	-
	301g/m ² to 350 g/m ²	-	-

	For the 217g/m ² or more wide paper, only the cover is available and 1 sheets is counted as a set of 5 sheets.
Staple position	Automatically adjusted according to the paper size (60mm to 148.5mm)
*1 1250/1250P/1052/951+LU-410: 324mm x 483mm (The machines except for LU-410 conform to each product specification)	
*2 1250/1250P/1052/951+PF-706: 120mm x 240mm (The machines except for PF-706 conform to each product specification)	

(2) Half-Fold mode

Paper size	SRA3, A3, B4, ISOB4, SRA4S, A4S, B5S, ISOB5S 13 x 19, 12 x 18, 11 x 17, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11S 8 ¹ / ₂ x 13, 8 ¹ / ₄ x 13, 8 ¹ / ₈ x 13 ¹ / ₄ , 8 x 13, 7 ¹ / ₄ x 10 ¹ / ₂ S 8K, 16KS Wide paper (A3W, A4SW, B4W, 12 x 18W, 11 x 17W, 8 ¹ / ₂ x 11SW, Max. 331mm x 488mm* ₁) Custom size paper (Max. 331mm x 488mm* ₁ , Min. 120mm x 240mm* ₂)		
Applicable paper	Plain, Fine, Color, Coated, PrePrinted, Book/News, Embossed, Embossed2 (same as the main body)		
Paper weight	Inside paper: 50g/m ² to 216g/m ² Cover: 50g/m ² to 300g/m ²		
Maximum center folding sheets	Weight	Sheet	
		Paper width is 279.4mm or longer in the sub scan direction. Paper width is shorter than 279.4mm in the sub scan direction.	
	40g/m ² to 49 g/m ²	-	-
	50g/m ² to 61g/m ²	5 sheets	-
	62g/m ² to 74g/m ²	5 sheets	-
	75g/m ² to 80g/m ²	5 sheets	5 sheets
	81g/m ² to 91g/m ²	5 sheets	5 sheets
	92g/m ² to 105g/m ²	5 sheets	5 sheets
	106g/m ² to 135 g/m ²	5 sheets	5 sheets
	136g/m ² to 162g/m ²	5 sheets	5 sheets
	163g/m ² to 216g/m ²	5 sheets	5 sheets
	217g/m ² to 244g/m ²	1 sheet	1 sheet
	245g/m ² to 300g/m ²	1 sheet	1 sheet
	301g/m ² to 350 g/m ²	-	-

*1 1250/1250P/1052/951+LU-410: 324mm x 483mm (The machines except for LU-410 conform to each product specification)

*2 1250/1250P/1052/951+PF-706: 120mm x 240mm (The machines except for PF-706 conform to each product specification)

(3) Tri-folding mode

Paper size	A4S 8 ¹ / ₂ x 11S 16KS	
Applicable paper	Plain, Fine, Color, Coated * ₁ , PrePrinted, Book/News, Embossed, Embossed2 (same as the main body)	
Paper weight	Inside papers: 50g/m ² to 105g/m ²	
Maximum tri-folding sheets	Weight	Sheet
	40g/m ² to 49 g/m ²	-
	50g/m ² to 61g/m ²	3 sheets
	62g/m ² to 74g/m ²	3 sheets
	75g/m ² to 80g/m ²	3 sheets
	81g/m ² to 91g/m ²	3 sheets
	92g/m ² to 105g/m ²	1 sheet
	106g/m ² to 135 g/m ²	-
	136g/m ² to 162g/m ²	-
	163g/m ² to 216g/m ²	-
	217g/m ² to 244g/m ²	-
	245g/m ² to 300g/m ²	-
	301g/m ² to 350 g/m ²	-

*1 Maximum tri-folding sheets: 1 sheet

(4) Allowable amount of curling

Paper curl amount	 <p>The amount is measured with 5 papers overlapped after printed</p>	
	a	Excluding the OHP paper: Amount of curl: 15 mm or less OHP paper: Amount of curl: 3 mm or less

18.4 Machine data

Power source	24/5VDC (supplied from the main body)
Maximum power consumption	40W or less
Dimensions	281.3 mm (W) x 596.4 mm (D) x 529.8 mm (H)
Weight	SD-510 itself: Approx. 22.6kg Output tray: Approx. 3.8kg

18.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

18.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

19. PK-522

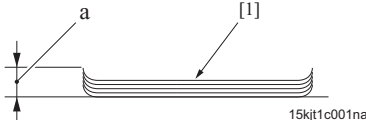

19.1 Type

Type	FS-integrated type punching operation device
------	--

19.2 Functions

Punching method	Stops and punches every paper
No. of holes	Inch area: 2-Holes/3-Holes Metric area: 2-Holes/4-Holes
Hole diameter	Inch area: $\phi 8.0$ mm Metric area: $\phi 6.5$ mm
Punch hole accuracy	The accuracy is measured with 10 punched papers being overlapped.  Inch area: a (a diameter of an inscribed circle of a punched hole): 5.5mm or more Metric area: a (a diameter of an inscribed circle of a punched hole): 4.0mm or more
Hole pitch	Inch area: 70 mm (2 holes), 108 mm (3 holes) Metric area: 80 mm (2 holes/4 holes)
Supported mode	Punch mode, straight mode
Applicable post processing mode	Sort, group, staple

19.3 Type of paper

Paper size	2 holes	A3, B4, SRA4S, A4, A4S, B5, B5S, A5, A5S, ISOB4, ISOB5, ISOB5S, 11 x 17, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 5 ¹ / ₂ x 8 ¹ / ₂ S, 5 ¹ / ₂ x 8 ¹ / ₂ , 9 x 11, 8 ¹ / ₂ x 13, 8 ¹ / ₄ x 13, 8 ¹ / ₈ x 13 ¹ / ₄ , 8 x 13, 8K, 16K, 16KS
	3/4 holes	A3, B4, A4, B5, ISOB4* ¹ , ISOB5* ¹ , 11 x 17, 8 ¹ / ₂ x 11, 8K, 16K
Applicable paper	Plain, Fine, Color, Coated, PrePrinted, Book/News, Embossed, Embossed2 (same as the main body)	
Paper weight	60g/m ² to 300g/m ²	
Punching prohibited paper	Label, tab, OHT, second original, punched paper, Envelope, and others which cause troubles on the operation of the punch unit and the punch blade	
Paper curl amount	 a Curing: 10 mm or less [1] 5 sheets	

*1 3 holes only

19.4 Machine data

Power source	24/5VDC (supplied from the main body)
Maximum power consumption	30W or less
Dimensions	156 (W) x 592 (D) x 180 (H) mm
Weight	Approx. 4.5kg

19.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

19.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

20. PI-502

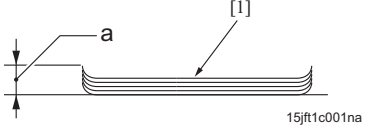

20.1 Type

Type	Torque limiter separation type sheet feeding device
------	---

20.2 Functions

Automatic sheet feeding (Online operation)	Feeds the sheet to FS automatically under the instruction from the main body.
Manual sheet feeding (Offline operation)	<p>Feeds the sheet to FS under the instruction from the operation panel of PI.</p> <p>The following 5 types can be selected for the post processing mode.</p> <p>1 staple/back mode</p> <p>2 staples (flat-stapling) mode</p> <p>Punch Mode (when PK-522 is installed on FS)</p> <p>Saddle stitching mode</p> <p>Tri-Fold mode</p> <p>Note</p> <p>The tray /Lw only supports the manual sheet feeding.</p>

20.3 Type of paper

Paper size	Tray /Up	<p>A4, A4S, B5, ISOB5*¹, B5S, ISOB5S*¹, and A5</p> <p>9 x 11, 8¹/₂ x 11, 8¹/₂ x 11S, 5¹/₂ x 8¹/₂</p> <p>16K, 16KS</p> <p>Custom paper (Max. 305mm x 297mm, Min. 182mm x 139mm)</p>
	Tray /Lw	<p>SRA3, A3, B4, ISOB4*¹, SRA4S, A4, A4S, B5, ISOB5*¹, B5S, ISOB5S*¹, and A5</p> <p>13 x 19, 12 x 18, 11 x 17, 9 x 11, 8¹/₂ x 14,</p> <p>8¹/₂ x 11, 8¹/₂ x 11S, 5¹/₂ x 8¹/₂</p> <p>8¹/₂ x 13, 8¹/₄ x 13, 8¹/₈ x 13¹/₄, 8 x 13</p> <p>8K, 16K, 16KS</p> <p>Custom paper (Max. 331mm x 483mm, Min. 182mm x 139mm)</p>
Type of paper	Plain, Recycle, Color, Special, Coated, Fine	
Paper weight	50g/m ² to 300g/m ²	
Capacity	Tray /Up, /Lw	200 sheets (80 g/m ²) or 30 mm or less in height
Paper curl amount	 <p>a Curing: 10 mm or less</p> <p>[1] 5 sheets</p>	

*1 (1250/1250P/1052 only)

20.4 Machine data

Power source	24/5VDC (supplied from the main body)
Maximum power consumption	30W or less
Dimensions	511 (W) x 620 (D) x 220 (H) mm
Weight	Approx. 10.5kg

20.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

20.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

21. MK-732

21.1 Type

Type	PI paper conveyance unit
------	--------------------------

21.2 Type of paper

Paper size	Maximum 331mm x 488mm, minimum 182mm x 139mm
Applicable paper	Plain, Fine, Coated , Recycled paper
Paper weight	50g/m ² to 300g/m ²

21.3 Machine data

Power source	24/5VDC (supplied from the main body)
Maximum power consumption	20W or less
Dimensions	478 (W) x 120 (D) x 201 (H) mm
Weight	3 kg

21.4 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

21.5 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

22. LS-505

22.1 Type

Type	Grip conveyance type horizontal stacker	
Conveyance method	Entrance conveyance	Roller conveyance method
	Stacker tray conveyance	Grip conveyance method
	Sub tray conveyance	Roller conveyance method
	Coupling conveyance	Roller conveyance
Alignment method	Movable alignment lever (stacker tray only)	
Method of stacking	Horizontal stacking	Mixed stacking is unavailable (stacker tray only)
Shifting method	Conveyance direction shift	Shift amount: 20mm (stacker tray only) *1

*1 The use of the shift is unavailable with tab paper.

22.2 Functions

(1) Function

Stacker tray non-sort mode	Exited into the stacker tray with no processing made.
Sub tray mode	Exits paper to the sub tray without any process.
Stacker tray sort mode	Executes shifting operation (20mm) and exits paper to the stacker tray *1
Coupling mode	Conveys paper to the succeeding device without any process.

*1 The use of the shift is unavailable with tab paper.

(2) Maximum tray capacity

Maximum tray capacity (Paper weight 80g/m ²)	Stacker tray	<ul style="list-style-type: none"> • 5,000 sheets SRA3, A3, JISB4 *1, ISOB4 *2 *3 *4 *6, SRA4 *4 *5 *6, SRA4S, A4, A4S 13 x 19 *3 *4 *5, 12 x 18, 11 x 17, 9 x 11 *3 *4 *6, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 8K *4 *5 *6 *7, 16K *4 *5 *6 *7 • 3,000 sheets Coated paper (Sub-scan direction is 380mm or longer) • 2,000 sheets JISB5 *1, ISOB5 *2 *3 *4 *6, A5, 5 1/2 x 8 1/2 *3 *4 *5
	Sub tray	Straight paper exit: 200 sheets Z-Folding paper: 20 sheets Half-folding paper: 40 sheets

*1 Default for North America (C8000/1200/1200P/1051/C7000/C7000P/C70hc/C6000 only)

*2 Default for Europe

*3 1200/1200P/1051/1250/1250P/1052 only

*4 C8000 only

*5 C6501/C6501P/C65hc only

*6 C7000/C7000P/C70hc/C6000 only

22.4 Machine data

Power source	100VAC to 240VAC, 5VDC (supplied from the main body) *1
Maximum power consumption	143W or less
Weight	Approx. 110kg
Dimensions	785 (W) x 723 (D) x 1,020 (H) mm

*1 C8000/C6501/C6501P/C65hc/C7000/C7000P/C70hc/C6000: Only 5VDC is supplied from the main body

22.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

22.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

23. FD-503

23.1 Type

Type	Multi-folding device with punch and PI functions
------	--

23.2 Functions

(1) Function

Normal paper exit function	Transfer paper exited from the main body is exited into the main tray/sub tray.
Punching function	Transfer paper that is exited by the main body or fed to the PI is punched for each sheet of paper and exited into the main tray.
Punch hole accuracy	<p>The accuracy is measured with 10 punched papers being overlapped.</p>  <p>a (a diameter of an inscribed circle of a punched hole): 5.0mm or more (2 punched holes), 6.5mm or more (3 punched holes)</p>
Folding functions	Transfer paper that is exited from the main body or fed to the PI is handled for folding (either one of the following: Z-Fold, Letter fold-out, Letter fold-in, Double parallel fold, Gate fold, and folding) for each sheet of paper, and exited into the sub tray/main tray (The Z-Fold exit to the main tray while in the FS connection is limited only to B4, A3, 8 1/2 x 14, 11 x 17, 12 x 18 and 8K.)
PI insertion function	PI tray paper is inserted in the transfer paper exited from the main body.
Manual mode	PI tray paper is punched, folded and stapled, and then exited into the sub tray/main tray. (The stapling function is available only when the staple unit is connected to the downstream of the FD.)

(2) Maximum tray capacity

<p>Main tray</p> <p>(Paper weight 40g/m² to 350g/m² *1, 64g/m² to 300g/m² *2 *11, 64g/m² to 350g/m² *3)</p>	<p>2500 sheets:</p> <p>A4, A4S, JISB5*4, ISOB5*1 *3 *5 *11, JISB5S*4, ISOB5S*3 *5 *11 9 x 11*1 *3 *11, 8 1/2 x 11, 8 1/2 x 11S 16K*2 *3 *6 *11, 16KS*2 *3 *6 *11</p> <p>1500 sheets:</p> <p>SRA3, A3, JISB4*4, ISOB4*1 *3 *5 *11, SRA4 *2 *3 *11, SRA4S 13 x 19*2 *3 *11, 12 x 18, 11 x 17, 8 1/2 x 14 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13 8K*2*3 *6 *11</p> <p>500 sheets:</p> <p>A5, A5S*2*3 *11, JISB6S*2 *3 *4 *11, ISOB6S*3 *5 *11, 5 1/2 x 8 1/2 *1*3, 5 1/2 x 8 1/2S*2*3 *11</p> <p>Others:</p> <p>Tab paper *7*8 (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2, Max. 324mm x 463mm)</p> <p>Wide paper *1(A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 1/2 x 11W, 8 1/2 x 11SW, 5 1/2 x 8 1/2W, Max. 324mm x 463mm)</p> <p>Custom size paper</p> <p>Minimum 95mm x 139mm, Maximum 324mm x 463mm*1 Minimum 100mm x 148mm, Maximum 330mm x 483mm*2 *11 Minimum 100mm x 140mm, Maximum 330mm x 483mm*3</p>

--	---	--

*1 1200/1200P/1051/1250/1250P/1052 only

*2 C6501/C6501P/C65hc only

*3 C8000 only

*4 Default for North America (C8000/1200/1200P/1051/C7000/C7000P/C70hc/C6000 only)

*5 Default for Europe

*6 For China/Taiwan only (C6501/C6501P/C65hc/1200/1200P/1051/C7000/C7000P/C70hc/C6000 only)

*7 Operation of paper exit with tab area at the trail edge side is not warranty.

*8 C8000 is A4, 8¹/₂ x 11 only

*9 Paper is stacked in the exiting sequence.

*10 Loading paper weight 49g/m² or less is not warranty

*11 C7000/C7000P/C70hc/C6000 only

23.3 Type of paper

(1) Punching function

Paper size	2-hole: SRA3, A3, JISB4 *1, ISOB4 *2 *3 *4 *9, SRA4S, A4, A4S, JISB5 *1, ISOB5 *2 *3 *4 *9, JISB5S *1, ISOB5S *2 *3 *4 *9, A5, A5S *4 *5 *9 12 x 18, 11 x 17, 9 x 11 *3 *4 *9, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 5 ¹ / ₂ x 8 ¹ / ₂ *3 *4 8 ¹ / ₂ x 13, 8 ¹ / ₄ x 13, 8 ¹ / ₈ x 13 ¹ / ₄ , 8 x 13 8K *4 *5 *6 *9, 16K *4 *5 *6 *9, 16KS *4 *5 *6 *9 Tab paper *7 (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 5 ¹ / ₂ x 8 ¹ / ₂ , Max. 324mm x 463mm) 3/4-hole: SRA3, A3, JISB4 *1, ISOB4 *2 *3 *4 *9 *10, A4, JISB5 *1, ISOB5 *2 *3 *4 *9 *10, 12 x 18, 11 x 17, 9 x 11 *3 *4 *9, 8 ¹ / ₂ x 11, 8K *4 *5 *6 *9, 16K *4 *5 *6 *9 Tab paper *7 (A3, A4, B4, B5, 11 x 17, 8 ¹ / ₂ x 11S, Max. 324mm x 463mm)
Applicable paper	Plain paper, tab paper
Paper weight	50g/m ² to 216g/m ² (2 sheets overlap mode: 50g/m ² to 91g/m ²) *3, 64g/m ² to 216g/m ² *4 *5 *9

(2) Folding functions

Paper size	A3, JISB4 *1, ISOB4 *2 *3 *4 *9, SRA4S, A4S 12 x 18, 11 x 17, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11S 8K *4 *5 *6 *9 Custom size paper (Maximum 305mm x 458mm, Minimum 210mm x 279mm)
Applicable paper	Plain paper
Paper weight	Half-Fold, Tri-Fold-in, Tri-Fold-out, Z-Fold 50g/m ² to 130g/m ² *3, 64g/m ² to 130g/m ² *4 *5 *9 Double parallel, Gate 50g/m ² to 91g/m ² *3, 64g/m ² to 91g/m ² *4 *5 *9

(3) PI functions

Paper size	SRA3, A3, JISB4 *1, ISOB4 *2 *3 *4, SRA4 *4 *5 *9, SRA4S, A4, A4S, JISB5 *1, ISOB5S *2 *3 *4, JISB5S *1, A5 13 x 19 *4 *5 *9, 12 x 18, 11 x 17, 9 x 11 *3 *4 *9, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 5 ¹ / ₂ x 8 ¹ / ₂ *3 *4, 8 ¹ / ₂ x 13, 8 ¹ / ₄ x 13, 8 ¹ / ₈ x 13 ¹ / ₄ , 8 x 13
------------	--

	8K*4*5 *6 *9, 16K*4*5 *6 *9, 16KS*4*5 *6 *9 Custom size paper *8 <ul style="list-style-type: none"> • 1200/1200P/1051/1250/1250P/1052 Minimum 182mm x 139mm, Maximum 324mm x 463mm • C6501/C6501P/C65hc/C7000/C7000P/C70hc/C6000 Minimum 182mm x 148mm, Maximum 330mm x 483mm • C8000 Minimum 182mm x 140mm, Maximum 330mm x 483mm
Applicable paper	Plain, Recycle, Fine, Special
Paper weight	50g/m ² to 300g/m ²
Maximum tray capacity	500 sheets (80g/m ²) x 2 trays

*1 Default for North America (C8000/1200/1200P/1051/C7000/C7000P/C70hc/C6000 only)

*2 Default for Europe

*3 1200/1200P/1051/1250/1250P/1052 only

*4 C8000 only

*5 C6501/C6501P/C65hc only

*6 For China/Taiwan only (C6501/C6501P/C65hc/1200/1200P/1051/C7000/C7000P/C70hc/C6000 only)

*7 For C8000/C7000/C7000P/C70hc/C6000, A4, 8¹/₂ x 11 only

*8 When using as the cover in perfect binding mode (Minimum 182mm x 279mm, Maximum 307mm x 483mm)

*9 C7000/C7000P/C70hc/C6000 only

*10 3 holes only

23.4 Machine data

Power source	100VAC to 240VAC, 5VDC (supplied from the main body) *1
Maximum power consumption	180VA or less
Dimensions	400 (W) x 723 (D) x 1231 (H)mm (The main tray is not included in the width)
Weight	Approx. 130kg

*1 C8000 /C6501 /C6501P /C65hc /C7000 /C7000P/C70hc/C6000 : Only 5VDC is supplied from the main body

23.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

23.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

24. SD-506

24.1 Type

Type	Saddle stitching unit with fore-edge trimming and multi-folding function
------	--

24.2 Functions

(1) Function

Sub tray paper exit mode	Exit paper to the sub tray without any process.
Coupling paper exit mode	Convey paper to the succeeding device without any process.
Saddle stitching mode	Exit paper to the bundle exit tray after the center folding/saddle stitching operation.
Saddle stitching trimming mode	Exit paper to the bundle exit tray after the center folding/saddle stitching/trimming operation.
Multi-center folding mode	Exit paper to the bundle exit tray after the center folding on 1 or more sheets of paper.
Multi-center folding trimming mode	Exit paper to the bundle exit tray after the center folding and the trimming operation on 1 or more sheets of paper.
Overlap tri-folding mode	Exit paper to the tri-folding tray after the letter folding operation on 1 or more sheets of paper.

(2) Maximum tray capacity

Sub tray (Paper weight 80g/m ²)	200 sheets		
	Z-Folding	20 sheets	
	Center folding	40 sheets	
Bundle exit tray	Folding & Stapling/trimming Mode	Stitching sheets	Set
		2 to 10	50 or more
		11 to 20	30 or more
		21 to 40	20 or more
		41 to 50	15 or more
	Multi-center folding mode	30 sets	
Tri-folding paper exit tray	Overlap tri-folding mode	20 sets	

24.3 Type of paper

(1) Straight/sub tray mode

Paper size	SRA3, A3, JISB4 ^{*1} , ISOB4 ^{*2} *3 *4 *10, SRA4 ^{*4} *5 *10, SRA4S, A4, A4S, JISB5 ^{*1} , ISOB5 ^{*2} *3 *4 *10, JISB5S ^{*1} , ISOB5S ^{*2} *4 *10, A5, A5S ^{*4} *5 *10, B6S ^{*4} *5 *10, ISOB56 ^{*4} *10, A6S ^{*4} *5 *10 13 x 19 ^{*4} *5 *10, 12 x 18, 11 x 17, 9 x 11 ^{*3} *4 *10, 8 ¹ / ₂ x 14, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 5 ¹ / ₂ x 8 ¹ / ₂ *3 *4, 5 ¹ / ₂ x 8 ¹ / ₂ S ^{*4} *5 *10 8 ¹ / ₂ x 13, 8 ¹ / ₄ x 13, 8 ¹ / ₈ x 13 ¹ / ₄ , 8 x 13 8K ^{*4} *5 *6 *10, 16K ^{*4} *5 *6 *10, 16KS ^{*4} *5 *6 *10 Wide paper ^{*3} (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8 ¹ / ₂ x 11W, 8 ¹ / ₂ x 11SW, 5 ¹ / ₂ x 8 ¹ / ₂ W, Max. 324mm x 463mm) Tab paper ^{*7} *8 (A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 ¹ / ₂ x 11, 8 ¹ / ₂ x 11S, 5 ¹ / ₂ x 8 ¹ / ₂ , Max. 324mm x 463mm) Postcard Custom size paper		
		Minimum 95mm x 139mm, Maximum 324mm x 463mm ^{*3}	
		Minimum 100mm x 148mm, Maximum 330mm x 483mm ^{*5} *10	
		Minimum 100mm x 140mm, Maximum 330mm x 487mm ^{*4}

*3 C8000 only

*4 C7000/C7000 /C70hc/C6000 only

24.4 Machine data

Power source	100VAC to 240VAC, 5VDC (supplied from the main body) *1
Maximum power consumption	270W
Weight	280kg
Dimensions	When the bundle output tray is stored: 1,170 (W) x 775 (D) x 1,020 (H) mm When the bundle output tray is pulled out 1,170 (W) x 1,441 (D) x 1,020 (H) mm

*1 C8000/C6501/C6501P/C65hc/C7000/C7000P/C70hc/C6000: Only 5VDC is supplied from the main body.

24.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

24.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

25. PB-503

25.1 Type

Type	Simplified perfect binding machine (Consoled hot-melt type)
------	---

25.2 Functions

(1) Function

Perfect binding mode	Automatically binds and stocks in a book stock section.
Sub tray mode	Exits paper to the sub tray without any process
Relay conveyance mode	Exits paper to the option (FS-521/FS-532) on the subsequent stage without any process

(2) Binding sheets

Binding sheets	Min. thickness	10 sheets		
	Max. thickness	Plain: 300 sheets or 30mm Color/Coated: 150 sheets or 15mm		
Binding sheets with Z-Fold sheets*1 Binding sheets*1	Simplex printing	Number of Z-Fold sheets	Max. number of unfold sheets	Total
		Number of Inserted sheets	Max. number of sheets	
		1 sheet	200 sheets	201 sheets
	Duplex printing	2 sheets	150 sheets	152 sheets
		Number of Z-Fold sheets	Max. number of unfold sheets	Total
		Number of Inserted sheets	Max. number of sheets	
		1 sheet	200 sheets	201 sheets
		2 sheets	150 sheets	152 sheets
		3 sheets	100 sheets	103 sheets
		4 sheets	50 sheets	54 sheets
	Simplex/duplex mixed printing (printer function)	When 1 or more unfold sheets is single-sided, the specification is the same as the simplex print. When the z-folded sheet is single-sided, the specification is the same as the duplex print.		

*1 C8000/C7000/C7000P/C70hc/C6000: The limit of the total number of sheets can be released by switching DIPSW30-5 from 0 (default) to 1.

1250/1250P/1052/1200/1200P/1051: The limit of the total number of sheets can be released by switching DIPSW37-2 from 0 (default) to 1.

(3) Maximum tray capacity

Book stock section	Maximum 11 books *1 x 2 rows *2 (book thickness: 30mm)	
	10 sheets to 30 sheets book	50 sets
	31 sheets to 150 sheets book	35 books or until the upper limit is detected.
	151 sheets to 300 sheets book	Until the upper limit is detected
PB cover paper tray*3	1000 sheets (82g/m ²) 500 sheets (216g/m ²)	
Sub tray	200 sheets (80g/m ²)	

*1 The available number of books may decrease due to curls of papers.

*2 When books have been stacked up to the limit at the first row, the first stack is automatically moved to the second row on the cart, and piling books at the first row continues.

*3 Cover paper supply is selectable from PB cover paper tray, main body tray, PI or PI-PFU (1200/1200P/1051/1250/1250P/1052 only).

(4) Others

Warm-up time	Approx. 20 minutes
Cover trimming	Selectable from Trim/Not trim.

25.3 Type of paper

(1) Paper size

Perfect binding mode	Inside paper: A4, JISB5*1, ISOB5*2*3*5*9, A5, A5S*3*9, 8 ¹ / ₂ x 11, 5 ¹ / ₂ x 8 ¹ / ₂ *3*9, 5 ¹ / ₂ x 8 ¹ / ₂ S*3*9, 16K*3*4*9 Custom size paper (Maximum 307 (W) x 221 (L) mm, Minimum 139 (W) x 210 (L) mm)
----------------------	---

	<p>Z-fold size (A3, JISB4^{*1}, ISOB4^{*2*3*5*9}, A4S, 11 x 17, 8¹/₂ x 11S, 8K^{*3*4*9})</p> <p>Cover:</p> <p>Maximum 307mm x 472mm, Minimum 139mm x 279mm</p> <p>Vertical (main scan direction) Same size as the inside paper.</p> <p>Horizontal (sub scan direction) Wide size L mm</p> <p>L= book size in the sub scan direction x 2 + book thickness (book spine) + 5mm (for trimming)</p>
Sub tray mode	<p>SRA3, A3, JISB4^{*1}, ISOB4^{*2*3*5*9}, SRA4^{*3*9}, SRA4S, A4, A4S, JISB5^{*1}, ISOB5^{*2*3*5*9}, JISB5S^{*1}, ISOB5S^{*2*3*9}, A5, A5S^{*3*9}, B6S^{*3*9}, ISOB6S^{*3*9}, A6S^{*3*9}, 8K^{*3*4*9}, 16K^{*3*4*9}, 16KS^{*3*4*9}</p> <p>13 x 19^{*3*9}, 12 x 18, 11 x 17, 9 x 11, 8¹/₂ x 14, 8¹/₂ x 11, 8¹/₂ x 11S,</p> <p>5¹/₂ x 8¹/₂^{*3*5}, 5¹/₂ x 8¹/₂S^{*3*9}</p> <p>8¹/₂ x 13, 8¹/₄ x 13, 8¹/₈ x 13¹/₄, 8 x 13</p> <p>Wide paper ^{*5} (A3W, B4W, A4W, A4SW, B5W, B5SW, A5W, 12 x 18W, 11 x 17W, 8¹/₂ x 11W, 8¹/₂ x 11SW, 5¹/₂ x 8¹/₂W, Max. 324mm x 460mm)</p> <p>Custom size: Maximum 330mm x 487mm^{*3*9}, 324mm x 463mm^{*5}</p> <p>Minimum 100mm x 140mm^{*3}, 100mm x 148mm^{*9}, 95mm x 139mm^{*5}</p> <p>Finite tab paper ^{*6*7}: A3, B4, A4, A4S, B5, B5S, 11 x 17, 8¹/₂ x 11, 8¹/₂ x 11S, 5¹/₂ x 8¹/₂</p> <p>Postcard</p>
Relay conveyance mode ^{*8}	<p>Paper which can be used by the subsequent option (FS-521/FS-532)</p> <ul style="list-style-type: none"> • Large size: <p>SRA3, A3, JISB4^{*1}, ISOB4^{*2*3*5*9}, SRA4^{*3*9}, SRA4S</p> <p>12 x 18, 11 x 17, 8¹/₂ x 14, 13 x 19^{*3*9}, 8K^{*3*4*9}</p> <p>8¹/₂ x 13, 8¹/₄ x 13, 8¹/₈ x 13¹/₄, 8 x 13</p> <p>Wide paper ^{*5} (Max. 324mm x 460mm)</p> • Small size: <p>A4, A4S, JISB5^{*1}, ISOB5^{*2*3*5*9}, JISB5S^{*1}, ISOB5S^{*2*3*9}, 16K^{*3*4*9}, 16KS^{*3*9}</p> <p>9 x 11, 8¹/₂ x 11, 8¹/₂ x 11S</p> • Minimum size: <p>A5, A5S^{*3*9}, JISB6S^{*1*3*9}, ISOB6S^{*2*3*9}, 5¹/₂ x 8¹/₂^{*3*5}, 5¹/₂ x 8¹/₂S^{*3*9}</p> • Others: <p>Finite tab paper ^{*6*7}: A3, B4, A4, A4S, B5, B5S, 11 x 17, 8¹/₂ x 11, 8¹/₂ x 11S, 5¹/₂ x 8¹/₂</p> <p>Custom size paper:</p> <p>Maximum 330mm x 487mm^{*3*9}, 324mm x 463mm^{*5}</p> <p>Minimum 100mm x 140mm^{*3}, 100mm x 148mm^{*9}, 95mm x 139mm^{*5}</p>

(2) Paper weight

Perfect binding mode	<p>Inside paper:</p> <p>64g/m² to 91g/m² ^{*2}</p> <p>64g/m² to 105g/m² ^{*1*6}</p> <p>Cover:</p> <p>82g/m² to 216g/m² ^{*2}</p> <p>81g/m² to 209g/m² ^{*1*6}</p>

Δ: Available for a paper curled less than 10mm

*1 Regarding Coated, the matt coated paper is only available for the body.

25.4 Machine data

Power source	100VAC 50/60Hz common 5VDC (supplied from the main body)	
Power consumption	1000W or less	
Weight	Approx. 270kg	
Dimensions	1,360 (W) x 1,223 (H) x 775 (D) mm	
	Binding section	740 (W) x 1,223 (H) x 775 (D) mm
	Book stock section Relay conveyance section	620 (W) x 1,020 (H) x 753 (D) mm

25.5 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80%RH (with no condensation)

25.6 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

26. IC Unit

26.1 Type

Type	Built-in box type for the KONICA MINOLTA main body
------	--

26.2 Functions

Resolution:	Printing System: 600 x 600dpi, 1200 x 1200dpi Scanning Resolution: 200dpi, 300dpi, 400dpi, 600dpi, 1200dpi
Gradation:	256 (8bit) equivalent
Printable Area:	Same as the main body
Number of Print:	1 to 9999
Continuous Print Speed:	bizhub PRESS 1250/1250P : 125ppm (A4, 8 ¹ / ₂ x 11) (For the 2nd and following copies) bizhub PRESS 1052 : 105ppm (A4, 8 ¹ / ₂ x 11) (For the 2nd and following copies) bizhub PRO 951: 95ppm (A4, 8 ¹ / ₂ x 11) (For the 2nd and following copies)
Page-description language:	PCL5e/6, Adobe PostScript3 (PS3019), PDF direct print (PDF Ver.1.7), TIFF direct print (TIFF Ver. 6 compliance), PPML (Ver. 2.2)
Printer Driver:	PCL6 (KONICA MINOLTA) There is no driver for PCL5e <ul style="list-style-type: none"> • Windows XP Home Edition/Professional (SP2 or later) • Windows Server 2003 Standard • Windows Vista (any version) • Windows Server 2008 • Windows 7 (any version) (until SP1) * (XP (Professional)/Server 2003/Vista/Server 2008/7 include x64) PS Plug-In/PS PPD <ul style="list-style-type: none"> • Windows XP Home Edition/Professional (SP2 or later) • Windows Server 2003 Standard • Windows Vista (any version) • Windows Server 2008 • Windows 7 (any version) (until SP1) • Mac OS 10.4/10.5/10.6 (Including Intel Mac 10.4/10.5/10.6) * (XP (Professional)/Server 2003/Vista/Server 2008/7 include x64)
Printing Method:	Pserver (IPX/SPX), LPD/LPR (TCP/IP), IPP (TCP/IP), Apple Talk (Ether Talk), Bonjour(TCP/IP), Web service printing (TCP/IP), NPrinter /RPrinter (IPX/SPX), Raw Port (TCP/IP)

26.3 Machine data

CPU	Pentium G6950 2.8GHz	
Memory	2GB	
SSD	2GB	
HDD	250GB	
Host Interface:	Ethernet, USB 2.0	
Power source	Supplied from the main body	
Network Interface	RJ-45 Ethernet (1000BASE-T/100Base-TX/10Base-T)	
LED:	10BASE-T	LED1: OFF LED1: Yellow
	100BASE-TX	LED1: Green LED1: Yellow
	1000BASE-T	LED1: Orange LED1: Yellow

26.4 Operating environment

Temperature	Same as the main body.
Humidity	Same as the main body.

26.5 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

27. GP-501

27.1 Type

Type	Multi-hole punch unit for ring binding
------	--

27.2 Modes of Operation

Bypass mode	The paper moves straight from the printer to the finisher without passing through the punch module. In this mode the paper is not punched.
Punch mode with Punch	The paper moves from printer to the punch module where it gets punched and then is routed to the finisher.

27.3 Machine data

Punch unit size	12" (305mm) W x 40" (1016mm) H x 30.5" (775mm) D
Weight	170 lbs (80kg) unpackaged, 270 lbs (123kg) packaged (Pallet, Carton, PKG Inserts)
Color	Top Cover . Orca Black, Lower covers . Cuttle Gray
AC Power Supply to GP-501	External power cord according to market destination.
DC 5V Supply to GP-501	Supplied by system to PCB contained within GP-501
System Power Supply Lines	GP-501 Internal Lead-Through <ul style="list-style-type: none"> On upstream side: Wiring with connectors through cover-recess. On downstream side: Lock-style connector panel on left side cover.

27.4 Software

Communication method	i) Start-stop synchronization style, full duplex. ii) 1 Start Bit, 8bit Data length, 1 Parity Bit, 1 Stop bit. Max Frame Length: 128 byte iii) Hard flow control (CTS/RTS). iv) Baud rate: [Standard] 19200 bps [ISW=Log file Transmissions] 78000 bps
Communication Content	According Interface Specification (See also Appendix B)

27.5 Electronic

Required signals to UP & Downstream connected units	RXD, RTS, CTS, TXD
---	--------------------

27.6 Inputs

(1) Media Input from Printer

Alignment/ skew variance at pick up	Center justified \pm 4mm
Line speed	290 to 1250 mm/s (Fixed speeds within this range)
Speed variance at pick up	\pm 2%
Sheet frequency	120 ppm maximum

(a) For Punching

Paper weight	20lb bond - 80lb cover Plain Paper: 75gsm - 216gsm Other Paper: 120gsm - 216gsm Exception ProClick: LTR & A4 Limited to 200gsm	
Paper type	See appendix C	
Maximum Sheet size	Letter configuration	279 x 216mm
	A4 configuration	297 x 210mm

(b) For Bypass

Paper weight	16lb bond - 93lb cover 64gsm - 350gsm	
Paper type	Coated, Pre-printed, High Quality, Plain, Book, Color, Rough, Post Card, Label, OHP, Index	
Transparency weight	5 -10 mil (0.127mm to 0.254mm)	
Maximum bypass sheet size	13" x 24.8" (330 x 630mm)	
Minimum bypass sheet size	3.74" x 5.47" (95 x 139mm)	

(2) Power

Supply	GP-501 individual power supply and power cord required.				
Configurations by market	See table below.				
Machine	Market	Voltage (V)	Current (A)	Frequency (Hz)	Paper size
1	US, Canada	115 +10/-15 %	3	60	8 ¹ / ₂ x 11
2	Europe, Australia	220-240 +10/-15 %	1.8	50	A4

27.7 Outputs

Alignment/ skew at delivery	± 2mm or less for the pick up position
Speed variance at delivery	± 1% compared to speed variance at pick up
Chip tray capacity	2500 cycles (based on punched sheet count)

27.8 Performance

Punch accuracy	Hole size	± 2%
	Alignment	±0.5mm
	Back gauge depth	±0.3mm

(1) Reliability

MCBJ: Punch	1 in 15,000 (20lb bond)
MCBJ: Bypass	1 in 65,000 (20lb bond)

27.9 Operation Environment, Storage, Transport

Normal Operation Temperature	10 deg C – 30 deg C
Normal Operation Humidity	10% - 80%
Storage Temperature	-10 deg C – 40 deg C
Storage Humidity	10% - 80%

27.10 Safety /Regulatory

Noise emissions (measured to ISO7779)	Punch	Maximum of 78dBA (punching 216gsm cover)
	Bypass	Maximum of 70dBA

(1) Safety Compliance

UL & CSA standards	CAN/USA-C22.2 No. 60950-01 UL60950-1 First Edition
TUV standards	IEC 60950-1:2001 EN60950-1:2001

(2) Electromagnetic Compliance

EMC standards	EN55024:1998 Amendments A1:2001 & A2:2003 EN61000-3-2:2000 EN61000-3-3:1995 Amendment A1:2001 EN55022:1998 Amendments A1:2000 & A2:2003 EN61000-4-2, EN61000-4-4, EN61000-4-5, EN61000-4-6, EN61000-4-11
FCC standards	Class B Part 15, Subpart B, Section A 15.107A & 15.109a

(2) EU	Konica Minolta Original	80	All
	Konica Minolta Profi	80	All
	Mondi BIO TOP 3 extra	80	All
	Mondi Color Copy	200	Q-Zone

*1 For only C6501/C6501P/C65hc

*2 Q-Zone: Guaranteed only in Q-zone

All: Guaranteed in all environments

*Refer to the below graph

27.14 Glossary of Terms

These terms are common to the punch and bindery industry.

Cerlox	The trade name GBC uses for its Plastic Binding
Color coil	A plastic coil that looks like a spring which is threaded through round holes punched in the document then the ends are cut off and crimped. The holes are either 4:1 or 5:1 (4 holes per inch or 5 holes per inch). This type of bind lays flat and even folds around for easy handling of the document.
Flush-cut covers	Covers stock that is the same size as the paper contents and has round corners.
Plastic binding	The name used to describe GBC's most common binding method. The 19 and 21 rectangular hole, Plastic Comb type.
ProClick	A plastic element that snaps together. This style requires holes that appear to be the same as Twin Loop but are actually slightly larger. The larger holes enable correct operation of the ProClick Pronto finishing devise.
Tabbing (hanging chad)	Tabbing or hanging chad is when a hole is not punched cleanly through the material leaving a piece of paper hanging from the edge. This condition occurs when a die set is worn and will usually result in miss-feeds.
Twin loop	Looped wire element that is feed into square or round holes in the document in a similar fashion to Plastic Binding. The holes are either 2:1 or 3:1 (2 holes per inch or 3 holes per inch). It is then squeezed together or crimped to create an attractive bind that lays flat.
Velobind	A heat seal plastic bind that is best known for it's security and it's attractive look. The one draw-back for VeloBind is that it is not a layflat bind style. It is most often used in the Legal market for it's security feature.

28. GP-502

28.1 Type

Type	Automatic Ring Binding Device (Ring Binder)
------	---

28.2 Functions

(1) Function

Bind mode	Automatically punches and binds papers exited from the previous device and stocks in a book stock section.
Through conveyance mode	Conveys papers exited from the previous device to the succeeding device without any process.

(2) Binding sheets

	Front cover (g/m ²)	Back cover (g/m ²)	Body weight (g/m ²)	Minimum (sheets)	Maximum (sheets) *2
Sheet*1	163 to 216 or OHP paper: 1 sheet	163 to 216 1 sheet	75	7	102
			80		96
			90		85
			100		76
			110		70
			120		64

*1 The sum of the front cover, back cover and body

*2 The value at the Q zone

(3) Book stock quantity

The full detection sensor detects the limits of the stock quantity. For the 75g/m² body and 216g/m² front cover, refer to the followings.

7 sheets book	Equivalent to 30 sheets book or until the upper limit is detected
20 sheets book	Equivalent to 25 sheets book or until the upper limit is detected
102 sheets book	Equivalent to 8 sheets book or until the upper limit is detected

(4) Others

Punch waste capacity	Approx. 5,000 punches *Detected by the full detection sensor *Except for the environment of low humidity
Element stacker	Minimum 16 sheets *Detected by the full detection sensor
	Maximum Approx. 100 sheets *Defined by the position of the label

28.3 Type of paper

(1) Paper size

Bind mode	A4, 8 ¹ / ₂ x 11 Tab paper (A4, 8 ¹ / ₂ x 11)
-----------	--

Requirements for the tab paper

a: Min.: 5mm

b: Max.: 13.5mm

b: R Min.: 4.8mm

[1] Tab paper with a shoulder: available

[2] Tab paper with no shoulder: unavailable

Through conveyance mode	Same as the main body.
-------------------------	------------------------

(2) Paper weight

Bind mode	Body	75g/m ² to 120g/m ²
	Cover	163g/m ² to 216g/m ² OHP paper (Front cover only)
	Insert sheet	75g/m ² to 120g/m ²
Through conveyance mode	Same as the main body.	

(3) Type of paper

Bind mode	Body	Plain, Fine, Coated* ¹
	Cover	Plain, Fine, Coated* ¹ , OHP papers* ²
	Insert sheet	Plain, Fine, Coated
Through conveyance mode	Same as the main body.	

*¹ Only when connected to 1250/1250P/1052*² Front cover only. The paper feeding reliability, image, and damage are not assured. Q zone only.**(4) Recommended paper**

	Paper type	Product name	Weight	Bind mode

* Recommended paper A: Evaluation standard paper for Japan, North America and Europe

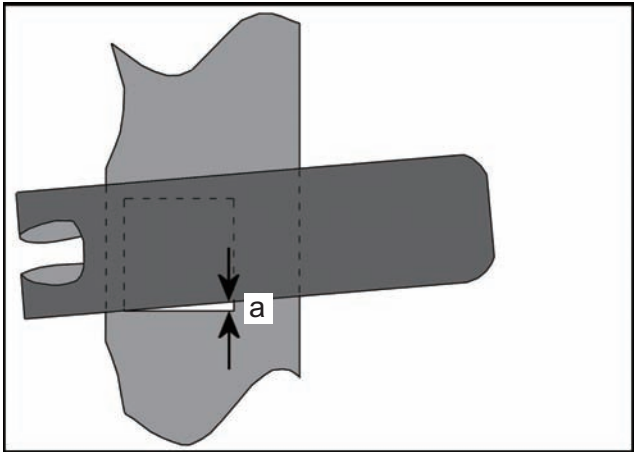

Recommended paper B: Paper for original through check. Q zone is recommended

28.4 Performance Specifications

(1) Input conditions

Paper grain	No limitation		
Centering	±8mm around the center		
Paper curl amount			
	a	In the bind mode, 10mm or less In the through conveyance mode, 15mm or less OHP paper: Amount of curl: 3 mm or less	

(2) Sticking specifications

Sticking specifications	Peeling strength of the bind element: 8.9N or more		
Sticking accuracy	<div></div>		
	a	Finger skew: ±1.6mm	
Sticking length	Length: 10 steps in accordance with the book thickness		
	Step	Sticking length x (mm)	Step Sticking length x (mm)
	1	38.6	6 25.4
	2	36.8	7 22.6
	3	34.0	8 19.9
	4	30.9	9 16.7
	5	28.5	10 15.8

The variability among the sticking lengths in each step: $x \pm 1.8\text{ mm}$

a The variability among the sticking lengths in a single book (The variability between 9 elements): 5mm or less

Sticking defective Regardless of the low temperature and low humidity

(3) Book specifications

Hole position

a $\pm 0.5\text{ mm}$ or less

Center misalignment: $\pm 1.0\text{ mm}$ or less around the paper center

Hole quality	The size of the fluff	0.38mm or less	
	Remainings after trimming	Regardless of 1mm or less in height, and 1.5mm or less in width.	
Element damage	Grain damage	Regardless of the grain damage such as the scratches by nail.	
	Edge damage	Regardless of 1.0mm x 1.0mm or less in size, and 1.0mm or less in height.	
	Hole damage (Back side only)	Dent of 0.6mm to 0.9mm in diameter	Regardless of 100 dents or less for 1 Box
		Dent of 1.0mm or more in diameter	Regardless of 1 dent or less for 1 Box
		Unless the depth of the dent has no effect on the surface.	

28.5 Materials

Name	RB-101 (Ring binder element for GP-502)		
Type	GBC ellips		
Color	4 Colors		
	Black: WY1, Clear: WY2, White: WY3, Navy Blue: WY4		
Thickness	0.356 \pm 0.02 mm (Base material only)		
	0.510 \pm 0.03 mm (Base material and double-stick tape)		
Service life	1 year after manufacture. Only for the ones that are saved under the following conditions. Storage ambient condition: Temperature: 12°C to 32°C, Humidity: 25% to 80% Transportation ambient condition: Temperature: 0°C to 70°C, Humidity: 0% to 90%		

Percent defective * The incidence ratio where the element has no double-stick tape	1/200 sheets
---	--------------

28.6 Machine data

Power source	Inch: AC 115V, 60Hz Metric: AC 230V, 50Hz
Maximum power consumption	Inch: 200W or less (2.2A or less) Metric: 190W or less (0.98A or less)
Weight	193kg
Dimensions	655 (W) x 944 (D ^{*1}) x 1,020 (H) mm

*1 Including the power box.

28.7 Operating environment

Temperature	10°C to 30°C
Humidity	10% to 80% RH (with no condensation)

28.8 Note regarding the specifications

Note

- The information herein may be subject to change for improvement without notice.

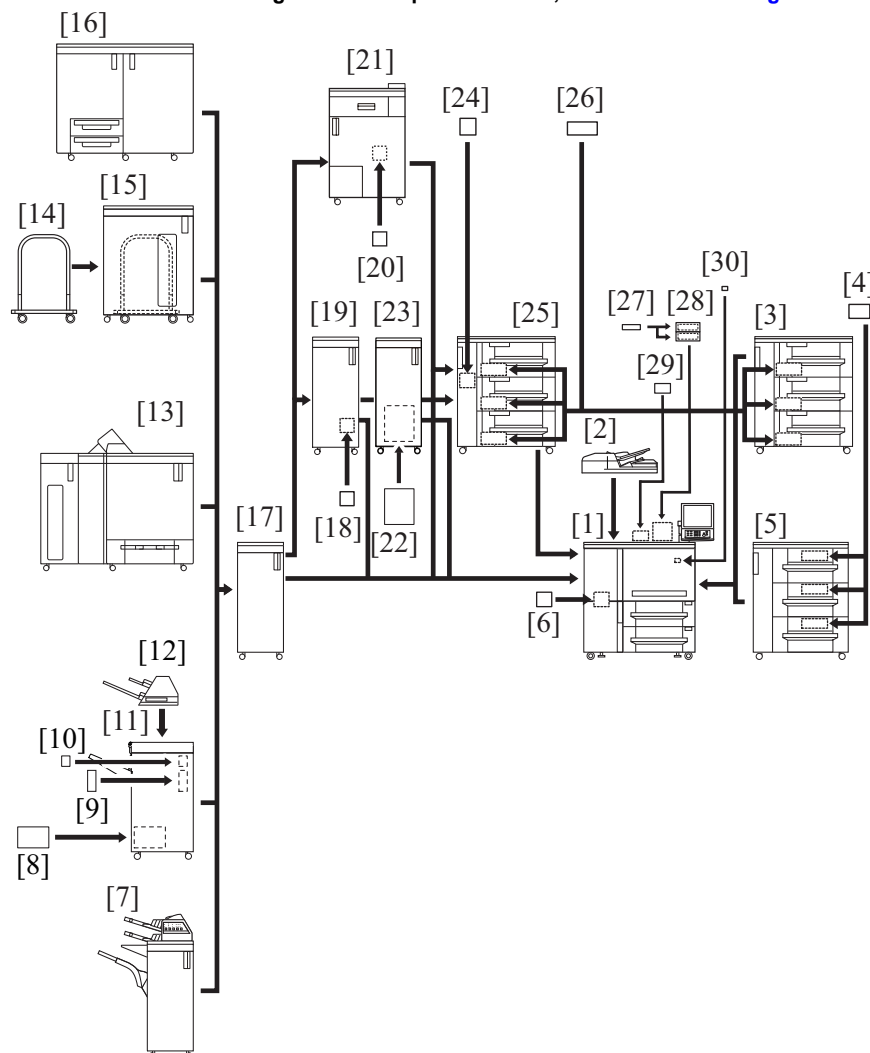

D OVERALL COMPOSITION

1. SYSTEM CONFIGURATION

1.1 SYSTEM CONFIGURATION (1250/1250P/1052)

NOTE

- For details of the configuration for optional device, refer to “D.1.2 Configuration for optional device (1250/1250P/1052)”.

[1] Main body	[2] Reverse automatic document feeder (DF-615) *1
[3] Large capacity paper feed unit with suction (PF-703)	[4] Overlay printing kit (PP-701)
[5] Large capacity paper feed unit (PF-706)	[6] Fusing unit for envelope (EF-102)
[7] Folding unit (FD-503)	[8] Saddle stitch unit (SD-510)
[9] Punch kit (PK-522)	[10] PI-502 coupling conveyance kit(MK-732)
[11] Finisher (Flat staple type) (FS-532)	[12] Post inserter (PI-502)
[13] Perfect binder (PB-503)	[14] Large capacity stacker handcart (LC-501)
[15] Large capacity stacker (LS-505)	[16] Saddle stitch unit (SD-506)
[17] Relay conveyance unit (RU-510)	[18] Die set (DS-***)*2
[19] Multi-hole punch unit (GP-501)	[20] Ring binder element (RB-101)
[21] Smart Punch unit (GP-502)	[22] Humidification unit (HM-102)
[23] Relay conveyance unit (RU-509)	[24] PI-PFU kit (FA-501)
[25] Post inserter (PI-PFU: PF-703 + FA-501)	[26] Dehumidification heater (HT-505) *3
[27] Inner HDD kit for removable HDD kit (HD-511)	[28] Removable HDD kit (RH-101)
[29] Authentication unit (AU-201)	[30] Upgrade kit (UK-205)

*1 In the case of the 1250P, no scanner/DF function is provided.

*2 Selectable arbitrarily in accordance with the number and shape of pins.

Model	Paper size	The number of pins	Shape of pin
DS-501	8 ¹ / ₂ x 11	3	Round
DS-502	8 ¹ / ₂ x 11	19	Rectangle

DS-503	8 ¹ / ₂ x 11	32	Square
DS-504	8 ¹ / ₂ x 11	21	Rectangle
DS-505	8 ¹ / ₂ x 11	44	Round
DS-506	8 ¹ / ₂ x 11	11	Round
DS-507	8 ¹ / ₂ x 11	32	Rect.
DS-508	A4	4	Round
DS-509	A4	21	Rectangle
DS-510	A4	34	Round
DS-511	A4	23	Round
DS-512	A4	47	Round
DS-513	A4	12	Round
DS-514	A4	34	Rect.
DS-515	A4	2	Round
DS-516	A4	20	Rectangle
DS-517	A4	23	Square
DS-518	A4	34	Square

*3 Used exclusively for PF-703. 2 units can be installed to one PF-703 at the maximum. 4 units can be installed to the system in total when 2 or more PF-703 are used in the system (including the use of the post inserter).

1.2 Configuration for optional device (1250/1250P/1052)

Note

- The options can be connected each other. However, be sure to take note of the AC connection mode.
- Depending on the combination of the main body and the finishing options, RU-509, HM-102, and PI-PFU do not need to be connected.
- RU-510 has to be connected for connecting PI-PFU and/or GP-501.
- RU-510 is essential for 1250/1250P.
- In case of 1052, RU-510 does not need to be connected except for PI-PFU connection.
- MK-732 must be connected for connecting PI-502.
- FS-532 and PF-703 must be connected for connecting EF-102. And the finishing options which can be connected are RU-510, FS-532, SD-510, PK-522, PI-502, FD-503, GP-501 and GP-502.
- The combination except as mentioned in the following is prohibited.

1.2.1 Coupling combination of the main body and the paper feed option

Coupling combination of the main body and the paper feed option				AC power to be connected to
1	PF-706		Main body	-
2	PF-703		Main body	-
3	PF-706	PF-703	Main body	-
4	PF-703	PF-703	Main body	-

1.2.2 Coupling combination of the main body and the finisher option

Combination of the main body and the finisher option									AC power to be connected to	
1	Main body	PI-PFU	HM-102	RU-509	RU-510	FD-503	LS-505		External (RU-509)

3. PAPER PATH

3.1 PAPER PATH

[1]	Registration conveyance	[2]	PFU/LU*1 paper feed
[3]	Tray /1 paper feed	[4]	Tray /2 paper feed
[5]	ADU paper feed	[6]	Reversal Output
[7]	De-curler/Lw paper exit*2	[8]	Straight paper exit
[9]	De-curler/Up paper exit	[10]	ADU reverse conveyance

*1 LU paper path supports PRO 951 only.

*2 PRO 951 is not supported.

3.2 Paper exit path pattern

3.2.1 Outline of paper exit path pattern

- The paper exit path differs between face up and face down according to the difference of the line speed and whether RU-510 is provided or not.
- Each of the straight paper exit path and the reverse paper exit path is provided in the main body and RU-510.
- RU-510 has 2 types of reverse paper exit forms; the double sheets reverse paper exit and single sheet reverse paper exit.

Note

- Since PRO 951 does not include RU-510 in the system configuration, Face up is specified in the straight output and Face down in the reversal output.
- The paper exit path of the decurler /Up and /Lw of the main body is selectable in both cases of the straight output and the reversal output.
- Since PRO 951 does not install the decurler /Lw, the paper exit path of the decurler /Lw is not selectable.

3.2.2 Paper exit path pattern when RU-510 is installed

- The following shows the paper exit path pattern when RU -510 is installed to the main body.

Note

- Installing RU-510 is essential for 1250/1250P and it enables the continuous copy speed 125 sheets/min. (A4).
- It is not essential for 1052 to install RU-510 if PI-PFU (PF-703 + FA-501) or GP-501 is not included in the system configuration.

RU-510	Line Speed (mm/s)	Continuous copy speed (sheets/min.) A4	Face up		Face down	
			Main body	RU-510	Main body	RU-510
Provided	570	125	Reverse paper exit	Double sheets reverse paper exit	Straight paper exit	Double sheets reverse paper exit
	490	105	Straight paper exit	Straight paper exit	Straight paper exit	Single sheet reverse paper exit
	330	70	Straight paper exit	Straight paper exit	Straight paper exit	Single sheet reverse paper exit
Not provided	490	105	Straight paper exit	-	Reverse paper exit	-

	330	70	Straight paper exit	-	Reverse paper exit	-
--	-----	----	---------------------	---	--------------------	---

3.3 Paper exit process of RU-510 according to the difference of the finishing option and the weight

The reverse paper exit process of RU-510 switches the double sheets conveyance, the single sheet conveyance and the straight conveyance according to the connected finisher option and the paper weight.

The combination of the process patterns of RU-510 is shown in the following list.

3.3.1 In case of 1250/1250P

⊙ : Double sheets reverse conveyance △ : Single sheet straight conveyance
 ○ : Single sheet reverse conveyance — : Out of specification

4. CONTROL BLOCK DIAGRAM

[1]	Image bus	[2]	Parallel bus
[3]	Clock-synchronized serial bus	[4]	UART bus
[5]	Other bus	[6]	Individual signal line

5. IMAGE CREATION PROCESS

5.1 Image creation flow and functions

Step	Process	Function
Step 1	Charging process	Forms a charge layer on the photo conductor drum.
Step 2	LED exposure process	Forms an electrostatic latent image on the photo conductor drum.
Step 3	Developing process	Makes the electrostatic latent image to the visible image.
Step 4	transfer process	Transfers the toner image on the photo conductor drum to the paper.
Step 5	Separation process	Separates paper after the toner transfer from the photo conductor drum.
Sub step 1	Discharge before cleaning	Removes the potential of the toner on the photo conductor drum after the transfer. Also, remove the residual potential on the photo conductor drum after the transfer
Sub step 2	Drum cleaning	Removes the toner on the photo conductor drum after the transfer.
Sub step 3	Exposure before charging	Removes the potential remains on the photo conductor drum after the drum cleaning.
Sub step 4	Transfer belt cleaning	Removes the toner on the transfer belt after the transfer.
Sub step 5	Toner collection	Collect the toner that is removed by drum cleaning and transfer belt cleaning. (Not displayed in the following picture.)

[1] Write unit (LPH)	[2] Developing unit
[3] Paper	[4] Photo conductor drum
[5] Transfer roller	[6] Rear nip roller
[7] PCC unit	[8] Transfer belt
[9] Transfer belt cleaning unit	[10] Cleaning unit
[11] Erase lamp (EL)	[12] Charging corona

5.2 Charging process (Step 1)

- The charging corona consists of the gold coated tungsten wire [4] and the charging control plate [3].
- Applies the high DC voltage (negative) to the charging corona, and charges the negative charge [1] to the photo conductor drum [2] by discharging of wire.
- During the discharge from the wire, the potential of the photo conductor drum is the same as the potential around because the discharge passes through the charge control plate.

[1]	Charge (negative)	[2]	Photo conductor drum
[3]	Charging control plate	[4]	Charging corona

5.3 LED exposure process (Step 2)

- The charge [3] on the photo conductor drum has a characteristic that it is neutralized and disappears when the light is exposed.
- With this characteristic, creates an image on the photo conductor drum by exposing the LED light to the image area.
- The image that is created on the photo conductor drum by charging is referred to as "electrostatic latent image".

[1]	Write unit (LPH)	[2]	Neutralized section
[3]	Charge (negative)	[4]	LED light

5.4 Developing process (Step 3)

- The non-image points of the electrostatic latent image on the photo conductor drum [3] is charged negatively [4] while the image points are neutralized [5].
- As the toner is charged negatively [2], it is attracted to the image points on the photo conductor drum. As a result, a visible toner image is created on the photo conductor drum. This operation is referred to as "development."

[1]	Developing roller	[2]	Toner (negative)
[3]	Photo conductor drum	[4]	Charge (negative)
[5]	Neutralized area	-	

5.5 Transfer process (Step 4)

- The operation to move the toner image [1] on the photo conductor drum [6] to the paper [2] is referred to as "transfer".
- At the transfer, the transfer roller [4] which is mounted on the bottom part of the transfer belt [3] conveys the paper while the paper is pressed against the transfer belt and the photo conductor drum.
- DC bias at high voltage is applied to the transfer roller.
- The DC bias that is applied to the transfer roller is positive. The toner that is charged negatively is moved on the paper by electrolysis that is formed between the transfer roller and the photo conductor drum.

5.6 Separation process (Step 5)

- At the transfer, the paper [1] being transferred is absorbed to the transfer belt [2] that is charged positively by the transfer roller [3].
- The paper that passed through the transfer position is about to wrap around the photo conductor drum [4], but is conveyed without wrapping because the absorption power to the transfer belt is stronger. This operation is referred to as "separation".
- The paper [5] separated from the photo conductor drum is conveyed absorbing to the transfer belt, and the paper absorbing to the belt is self-stripped at the belt drive roller section [6].

5.7 Toner neutralizing (Sub step 1)

- A developing bias voltage is impressed onto the PCC unit [3]. Between the paper, the positive is outputted and the potential of the toner that is charged negatively is neutralized. In the paper (during the transfer), the negative is outputted and the memory by the residual potential after the transfer is prevented.
- The neutralized toner [4] is easy to be cleaned because the absorption to the photo conductor drum weakened.

[1]	Photo conductor drum	[2]	Toner (negative)
[3]	PCC unit	[4]	Toner (Neutralized)

5.8 Drum cleaning (Sub step 2)

- Since the toner [2] neutralized at the PCC unit still has the absorption power, the toner remains being attached on the photo conductor drum [1].
- The process to remove the toner that is attached on the photo conductor drum is referred to as "drum cleaning".
- Drum cleaning is conducted by scraping the toner adhering to the photo conductor drum with the edge of the urethane rubber plate which is called blade [3].

[1]	Photo conductor drum	[2]	Toner
[3]	Blade	-	

5.9 Exposure before charging (Sub step 3)

- After completion of drum cleaning, no toner remains but a subtle potential remains [2] on the photo conductor drum [1] surface.
- If the potential remains on the drum surface, the charging for the next print is not performed normally.
- The exposure which is different from the laser exposure is performed to neutralize the potential on the drum surface completely. This process is referred to as "exposure before the charging."
- This machine uses the erase lamp (EL) [3] for the exposure before the charging.

[1]	Photo conductor drum	[2]	Remaining potential
-----	----------------------	-----	---------------------

[3]Erase lamp (EL)	-
--------------------	---

5.10 Transfer belt cleaning (Sub step 4)

- The transfer belt [8] gets dirty because the drum contacts it directly.
- The process to remove the toner that is attached on the transfer belt is referred to as "transfer belt cleaning process".
- For 1st cleaning shaft [4] of the transfer belt cleaning unit, apply the positive voltage [5] and collect the toner that is attached on the transfer belt by 1st cleaning brush [6].
- For 2nd cleaning shaft [3], apply the negative voltage [2] and collect the toner that is attached on the transfer belt by 2nd cleaning brush [1].

[1]2nd cleaning brush	[2]Negative voltage
[3]2nd cleaning shaft	[4]1st cleaning shaft
[5]Positive voltage	[6]1st cleaning brush
[7]Toner	[8]Transfer belt

5.11 Toner collection (Sub step 5)

- The toner collected in the drum cleaning section [11] and the transfer belt cleaning section [12] must be conveyed and disposed into the waste toner box [4] without being recycled for the maintenance of the image quality.

[1]Vertical conveyance section for transfer belt cleaning	[2]Waste toner box connection section

[7]Right inside	[8]Waste toner motor (M9)
[9]Vertical conveyance section for drum cleaning	[10]Drum cleaner connection section
[11]Drum cleaning section	[12]Transfer belt cleaning section

6. IMAGE CREATION CONTROL

- When detecting that a print start signal turns ON [1], the loop motor (M18) and other motors provided for paper feed and conveyance processes turn ON to start the paper feed operation.
- When a prescribed time elapses after receiving this signal, the drum motor (M2), the developing motor (M3) and the transfer belt motor (M30) turn ON [2] with each of the units around the photo conductor section brought into an operating condition.
- The erase lamp (EL) turns ON to start neutralizing the drum.
- When another prescribed time elapses, the transfer belt pressure release motor (M26) turns ON [3] to apply pressure on the transfer belt against the drum.
- After pressing the transfer belt to the drum, the following operations are performed in the following order; charging [4], high voltage impression to developing bias [5] and high voltage impression to the transfer belt [6].
- A specified period of time after the loop creation [7] on the supplied paper is completed in the registration roller section, the registration motor (M17) turns on [8] and starts the conveyance of the first piece of paper which creates the loop.
- At this time, M18 which drives the loop roller switches the line speed to low to conduct the loop assist [9].
- During this conveyance operation, the paper leading edge sensor (PS41) detects the paper edge and turns ON [10]. A specified period of time after it, the LPH turns ON to form the image on the drum with LED light.
- The drum claw solenoid (SD10) also turns ON [11] after the PS41 turns ON.
- Paper goes through the drum in time and the image which have been created on the drum is transferred to paper and the paper gets separated from the drum at that time.
- The paper separated from the drum is transferred to the fusing section by the transfer belt.
- The continuous paper conveyance enables the operations above and each operations turn OFF a specified period of time after the registration sensor (PS40) detects the paper edge and turns OFF [12].
- Some operations turn OFF a specified period of time after the paper exit sensor (PS3) detects the last piece of paper and turns OFF [13].

1.3 Mail remote notification system

1.3.1 Outline

"Mail remote notification system" is a system that allows you to obtain a list print which can be output by the main body using the Internet mail (E-mail).

Using this system dispenses not only with printing the list on paper but also visiting the users. Send an E-mail with a simple keyword to the main body to receive the list prints from the main body by E-mail.

1.3.2 Operating environment

In order to use the functions of "Mail remote notification system", the following conditions must be met. The operation of the functions is available while in jams, SC, and a low power mode. Under the condition that the main body is not operating, an E-mail sent to the main body does not get lost but is handled when the main body is activated again.

1. The main body has a server that can receive an E-mail using POP3 or IMAP protocol.

2. The copier has a mail server that can send an E-mail using SMTP protocol.
3. In the following 4 cases, "Mail remote notification system" does not operate in the main body.
 - When the main power switch (SW1) is OFF
 - When the sub power switch (SW2) is ON
 - The copier is in the auto shut-off mode.
 - When the "Enhance Security Mode" is set to ON (the use of the main body NIC is not allowed.)

1.3.3 Major functions

Sending a mail with a simple keyword allows you to use the following functions.

1. The list print information of the main body you want to obtain can be received by E-mail.
List prints that can be obtained are the following 11 lists.
 - Mode Memory List
 - User setting list
 - Font pattern list
 - Machine Management List
 - Adjustment Data List
 - Parameter list
 - User setting list
 - Counter list
 - Coverage data list
 - Communication log list
 - Audit log report
2. The counter list can be checked by cell phone.
3. A password used for certification of a mail can be change.
4. Directions for use of "Mail remote notification system" can be received by mail.
To use the preceding functions, send a mail with a simple keyword (command).
For particulars of the command, refer to [E.1.3.5 Operating instructions of the mail remote notification system](#)

1.3.4 Initialization

To use "Mail remote notification system", register the network parameter on the main body and the account on the mail server.

(1) Setting from the operation panel

Set the IP address of the copier from the operation panel to connect the copier to the network. [E.1.3.4.\(2\) Setting from the Web browser](#) When this setting has been already made, proceed to

(a) Procedure

1. Press [Utility/Counter] on the operation panel.
2. Press [06 Administrator Setting].
3. Press [04 Network Setting].
4. Press [01 Machine NIC Setting].
5. Press [01 TCP/IP Setting].
6. Enter "IP address," "Subnet mask," and "Gateway Address."
7. Restart the main body.

Note

- The system administrator normally assigns the IP address of the copier. For details, contact the system administrator.

(2) Setting from the Web browser

Enter the setting of the mail server from the Web browser. To use the Web browser, make preparations of a PC that can be connected to the network.

Note

- No space is available in all items to be set. The following characters cannot be used for setting an E-mail address.
() < > ; : " []
When an improper entry or setting is made on the Web browser, be sure to make corrections following the error message. When not correcting the error, program download error occurs.

(a) Procedure

1. Start up the Web browser.
When the proxy is set on the Web browser, it becomes unavailable to access the main body Web.
For particulars, contact the network administrator. Be sure to avoid setting from 2 or more browsers at a time.
2. Specify the IP address of the copier main body that is entered thorough "(1) Setting from the operation panel".
When you access the Web Utilities of the copier main body, "Main page" is displayed.

6. "Mail initial setting screen"

E-Mail Initial Setting

(E-Mail Notification)

Enable E-Mail notification	<input type="radio"/> Yes <input type="radio"/> No
Time difference	900 (Minimum: -1200, Maximum: 1200)
Sending mail (SMTP) server	0000 (Maximum: 128 Characters)
SMTP port number	25 (Default: 25, Minimum: 1, Maximum: 99999)
Sending mail (SMTP) server Time out	5 minute 0 second (Minimum: 30 seconds, Maximum: 5 minutes)
Interval between fetching mails	0 minute 0 second (Minimum: 1 minute, Maximum: 60 minutes)
Receiving mail server	0000 (Maximum: 128 Characters)
Kind of mail protocol	<input type="radio"/> POP3 <input type="radio"/> IMAP
POP3/IMAP port number	<input type="radio"/> Enable default (POP3: 110, IMAP: 143) <input type="radio"/> Custom: (Minimum: 1, Maximum: 99999)

Setting item	Details
Enable E-mail notification	When using the mail remote notification system, select "Use." Default is "Not use."
Time difference	The time at which a mail was sent out is calculated based on this value. For time difference setting, enter the difference from the standard time UTC in the range from -1200 (- 12 hour 00 minute) to +1200 (+12 hour 00 minute). When no value is entered, +0000 (UTC) is set. (Example: In the case of Japan, enter + 900.)
Sending mail (SMTP) server	Set the Host Name or IP address of the SMTP server. When using SSL, check in the "Enable SSL."
SMTP port number	Set the port Number of the SMTP server. For default, 25 is set.

Sending mail (SMTP) server time out	Set the time-out of the SMTP connection. Default is for 5 minutes.
Interval between fetching mails	The interval of the main body checking the receiving mail server to see if a mail is newly received. (An interval can be specified in the range from 1 minute to 60 minutes.) Taking into consideration the load on the network, this is set at the interval of 10 minutes.
Receiving mail server	Set the Host Name or IP address of the receiving mail server. When using SSL, check in the "Enable SSL."
Kind of mail spool	Select either of POP3 and IMAP. For default, [POP3] is selected.
POP3 (IMAP) Port Number	Select "Enable default" when using 110 for POP3, and 143 for IMAP. When using other than the default, select "Custom" and enter a port number to use.
User name on the server	Enter an account name assigned to the main body by the receiving mail server.
Password	Enter a password to the account name above.
E-mail Address for Machine Address	Enter the mail address of the main body its own. The address is normally "mail account name@incoming mail server name."
Nickname	Enter a nickname that is added to the title (subject) of a mail sent from the main body. No entry causes no problem.
CE password	Enter a password that is added to the title (subject) of a mail sent to the main body. The main body uses this password for security check.
Also Notice to the administrator	<ul style="list-style-type: none"> • Not transfer: Default • only illegal mail: When a mail received by the main body does not match with the password above, or when the mail size is in excess of a fixed size (10k bytes), transfer the mail. • all mails: Transfer all mails that use "Mail remote notification system."
Administrator E-mail address	When "only illegal mail" or "all mails" is selected, enter an E-mail address for transfer.
Announce delay time in replay mail	Choose whether to indicate in the mail the interval (the amount of time required) from the time when a mail is sent to the main body to the time when the main body receives it. Default is "Not use."
Enable POP (IMAP) before SMTP before SMTP Authentication	After authentication is made by the mail receiving server, a selection is made to decide whether to send out the mail or not. For default, "Send" is selected.
Retry polling when the machine is busy	POP polling option in machine busy state. For default, "Send" is selected.
Enable SMTP Authentication	Input the User name and the password when using it. Default is "Not use."

7. After completion of entry, click the [Apply] key.

8. Conduct the mail sending/receiving test.

- Click "Sending and Receiving test" and a sending test and a receiving test are conducted collectively to check to see if a test mail sent is correctly received.
When a test failed, recheck the set items following the error message.

Sending test	A mail sending test is made on the SMTP server. A test mail is sent to "E-mail Address for Machine" set in Step6.
Receiving test	A receiving test is made on the incoming mail server. A test mail is received from "E-mail Address for Machine" set in Step6.

9. Restart the main body.

1.3.5 Operating instructions of the mail remote notification system

For commands for communications with the main body and the details of options, refer to the following table.

Command	Option	Description	Minimum input
GETLOG		Send back a mail with the information specified in the option.	G
	ModeMemory	Send back [Mode Memory List] by mail.	M
	UserSetting	Send back [User Management List] by mail.	U
	FontPattern	Send back [Font Pattern List] by mail.	F
	Management	Send back [Machine Management List] by mail.	Ma
	Adjustment	Sent back [Adjustment Data List] by mail.	A
	Parameter	Send back [Parameter List] by mail.	P
	UserManagement	Send back [Use Management List] by mail.	UseM
	Counter	Send back [Counter List] by mail.	C
	Pixel Ratio	Send back [Coverage Data List] by mail.	PI
	CommunicationLog	Send back [Communication Log List] by mail.	Co
	Audit Log	Send back [Audit Log List] by mail.	Au
	ALL	Send back all preceding items by mail.	AL
	Not specified	Edit the [Counter List] to display it on cell phone and send back.	
CHPASS	[OldPasswd] [NewPasswd]	Change a password to be used for certification of a mail.	C
	[OldPasswd]	Specify a password that is currently used.	
	[NewPasswd]	Specify a new password.	

HELP	Not specified	Send a help mail that describes the operating instructions of the not specified commands above.	H
------	---------------	---	---

1.3.6 Mail sending

A command (option) printed on the mail is not case sensitive and can be identified from the minimum input listed on the preceding table.

Note

- Mail software can be used without discrimination by OS and a hand-held device or a free mail using browser.
- Use the mail software in the text mode. The HTML mail is not available.
- For the mail software, as a condition for reception, 128 characters or more are recommended as the maximum number of characters displayed in a line.
- One or more spaces or TAB are required between a command and an option that are written in the mail. The line break is not available.
- Enter all the commands that are written in the mail in one-byte alphanumeric characters (ASCII characters). When any other characters are used, an error message "No command found" is sent back.
- Start a command written in the mail from the line head with not space. When there is a space or TAB found at the line head, the line is ignored.
- The maximum number of commands available in a mail is 10. Commands exceeding 10 are ignored.
- Avoid attaching a file to a mail to send to the main body. When the attached file size is large, the main body handles that mail as a nuisance mail.
- Avoid adding a signature to a mail to send to the main body. The copier handles a signature on a mail as a command and send back an error mail.
- In the case the power is shut off while the main body is sending a mail or the main body is printing the list print, the same mail can be sent back twice.
- The main body can receive up to 5 mails from the mail server at the same time. The main body can receive up to mails from the mail server at the same time.

1.4 Machine setting data Import/Export screen

1.4.1 OUTLINE

Back up various types of data such as adjustment data and the setting data stored in the NVRAM board (NRB) from the PC to the PC via the Web browser. When the data in NRB corrupts, write that backup data onto the NRB to minimize the length of time for the re-adjustment of the main body.

Note

- The setting data to be written is same as the setting data which can be written in [I.5.15 Setting Data](#).
- The counter related data is not written onto the NRB.
- The backup data of alternate main body (with another serial number) is not available.
- When replacing the NRB, contact the service manager of the authorized distributor to confirm its handling.

(1) Data export

(a) Procedure

1. Enter the Service mode.

Note

- Enter the service mode to use this function.

2. Access the extension for maintenance in Web Utilities of the main body.

Extension for maintenance

[Back](#)

1.5 Job history list

1.5.1 OUTLINE

"Job History List" is the function to refer to the output history of the copier by using Web browser. The job history displayed on the operation panel is stored in the memory and deleted when the SW2 is turned OFF. However, with this function, the job history is stored in the main body hard disk /1 (HDD1) so that the users can refer it even after the SW2 is turned OFF.

1.5.2 Major functions

The job history list allows you to use the following functions.

- Displaying and downloading of job history by 100 data.
- Saving of the job history up to 1 million (The number of histories to save is selectable from 100,000, 500,000 or 1 million. Select 0 to turn OFF the job history utility.)

- Up to 10 types (A to J) of setting files can be imported from the CE page.
- The contents displayed can be changed for each of the 10 setting files (A to J)

Note

- **The history data displayed on the output history list of the main body when the job is completed is stored in HDD1. Therefore the data is not stored in case the job is stopped, proof is output or jam is caused.**
- **Sending history of the scanned information (Scan to E-mail, Scan to FTP, Scan to SMB, and so on) is not saved**

1.5.3 Setting method

When using the Job history list in the initialization, the 4 items of job history are displayed. However by importing the customized setting file, other items can be displayed. For the information about getting this setting file and the editor commands, contact the Support section of the authorized distributor.

The following are the display items of job history in the initialization

- No
- JobId
- Mode
- Date

Job History List

1 - 0 (Total 0)

No.	JobId	Mode	Date
-----	-------	------	------

(1) Setting from the touch panel

Set the IP address of the copier from the touch panel to connect the copier to the network.

[E.1.5.3.\(2\) Setting from the Web browser](#) When this setting has been already made, proceed to

(a) Procedure

1. Select [Utility/Counter] button on the touch panel.
2. Press [06 Administrator Setting].
3. Press [04 Network Setting].
4. Press [01 Machine NIC Setting].
5. Press [01 TCP/IP Setting].
6. Enter "IP address," "Subnet mask," and "Gateway Address."
7. Restart the main body.

Note

- **The system administrator normally assigns the IP address of the copier. For details, contact the system administrator.**

(2) Setting from the Web browser

Input the setting on the web browser to import the setting file to the copier. In order to use the Web browser, make preparations of the PC that can be introduced into the network.

(a) Procedure

1. Start up the Web browser.
 - When the proxy is set on the Web browser, it becomes unavailable to access the main body Web. For particulars, contact the network administrator. Be sure to avoid setting from 2 or more browsers at a time.
2. Specify the IP address of the main body that is entered thorough [E.1.5.3.\(1\) Setting from the touch panel](#)
When you access the Web Utilities of the copier main body, "Main page" is displayed.

Web Utilities

- [Remote Panel](#)
- [Remote Monitor](#)
- [Multi Monitor](#)

- [Machine Manager Setting](#)
- [Extension for maintenance](#)

3. "Main page screen"
Click [Extension for maintenance].
4. Enter the user name or the CE password in "Extension for maintenance" and press "OK."
User name: ce (small letter, cannot be changed)
Password: CE Enter the password. (Default:"9279272")

5. Enter the service mode.

Note

- When the copier is not in service mode, the setting of [Machine setting data Import/Export] is unavailable.

6. "Extension for maintenance screen"

Click [Machine setting data Import/Export]

Extension for maintenance

- [E-Mail Initial Setting](#)
- [CSRC http Setting](#)
- [Internet ISW](#)
- [Remote Panel](#)
- [Machine setting data Import/Export](#)
- [Mail Log](#)

Main Page

7. "Machine setting data Import/Export screen"

Click each symbol (A to J) displayed on [Import datatype change] -[Web setting]

Machine setting data Import/Export

Select joblog setting file [joblogA.html] and push submit button.

Import datatype change
 Chart [Gray Chart](#)
 Web setting [A B C D E F G H I J](#)

Note

- The setting file imported to A is displayed on "Machine Admin. Setting screen" in initial setting, therefore selecting A is recommended.

8. "Machine setting data Import/Export screen"

When the preparation of the setting file is completed, the following message is displayed. Click [Browse] key, and specify the setting file.

Machine setting data Import/Export

Select joblog setting file [joblogA.html] and push submit button.

Import datatype change
 Chart [Gray Chart](#)
 Web setting [A B C D E F G H I J](#)

Note

- The setting file does not need to be named [joblogA.html]. The settings are saved in the main body with names of joblogA.html to joblogJ.html.

9. "Machine setting data Import/Export screen"

Click [OK].

Submit...

10. "Machine setting data Import/Export screen"

When the import is completed correctly, the following message is displayed. Turn on and off the power switch (SW2) of the main body.

SUCCESS. Data were written to the machine.

File save succeed

Note

- To enable the setting data, turn the SW2 OFF and ON again and initialize the HDD1.
- Access the Web Utility after the initialization of main body/options is completed. The imported setting files may not take effect when accessing the Web Utility soon after the OFF/ON of SW2.

11. "Main page screen"

Click [Administrator Setting].

12. Enter the user name and the administrator password on "administrator setting log in" page, and click "OK".

User name: admin (small letter, cannot be changed)

Password: Enter the password of the administrator of the copier

**Note**

- They differ from the login user name and the password for the Extension for maintenance

13. "Machine Admin. Setting screen"

Click [Job History List].

14. "Job History List screen"

Change the URL in the address bar to the letter from A to J that has imported the customized file to update the page.

Example

Before: <http://X.X.X.X/goform/joblog.cgi?viw=A>

After: <http://X.X.X.X/goform/joblog.cgi?viw=B>

Note

- In case the customized file is imported to "B".

15. "Job History List screen"

Click [JobHistory list].

Note

- This operation sets the customized item number in order.
- The address bar displays "<http://X.X.X.X/goform/joblog.cgi>" after the click.

(b) In case the writing of the setting file fails

When the writing of the setting file fails, the following message is displayed. In this case, conduct the following procedure to see if the hard disk /1 (HDD1) has malfunction and requires the replacement or not.

FAILURE. Data were't written to the machine.

File save error!

1. Conduct the step 1 to step10 of the procedure (a) to see if the import of the setting file is normally completed. When the import of the setting file fails after conducting these processes, conduct the step4 and the following steps.
2. Enter the Service mode.
"Service Mode menu screen"
Press [04 State Confirmation].
Press [01. I/O Check Mode].
3. [I/O Check Mode screen]
Enter "99" with the numeric keys. Confirm that "99-00" is displayed on the message display area.
4. Press the Access button.
5. Enter "03" with the numeric keys. Confirm that "99-03" is displayed on the message display area.
6. Press the Start button.
Press the Start button to perform the HDD bad sectors check and recovery again when "NG" is displayed.
When "OK" appears, conduct the step1 to step10 of the procedure (1) to see if the import of the setting file is normally completed. If the writing of the setting file fails after conducting these processes, the trouble of the HDD1 is considerable. Replace it with new one.

1.6 Counter list acquisition using USB memory**1.6.1 OUTLINE**

By connecting the USB memory to the service port, the counter list information can be saved in the USB memory in the text file format.

1.6.2 List that can be acquired

1. Counter list
2. Mode Memory List
3. User setting list
4. User setting list
5. Audit log report
6. Machine Management List
7. Adjustment Data List
8. Coverage data list
9. Maintenance History
10. ORU-M Maintenance History (1250/1250P/1052 only)
11. Communication log list
12. Parameter List

Note

- If you set DIPSW30-1 from 0 to 1, the communication log list and the followings are output to the file.
- If you set DIPSW15-0 from 0 to 1, the ORU-M Maintenance History is output to the file. (1250/1250P/1052 only)

1.6.3 Acquisition method**(1) Preparation:**

Connect the USB memory to the main body connection port.

(2) Procedure

1. Press [Utility/Counter] on the operation panel.
2. Press [Details].
3. "Details Counter List screen"
Press [HELP] - [Utility/Counter] - [Mode Check] on the operation panel.
4. After the following message appears, remove the USB memory.

Note

- Do not remove the USB memory before the message disappears. The data is being output to the file while the message is displayed. If the USB memory is removed while the message is displayed, the file cannot be saved properly.

(3) File storage location

The list print data file is saved to the root directory in the USB memory.

(4) File name

The file name is defined as follows. When the same file name exists, it is overwritten with new data.

listprint + Machine code + destination code + Serial No._ Year_Date_Time.txt

Example: listprintA0G6001000285_2010_0103_1749.txt

1.7 ORU-M Counter Rewrite (1250/1250P/1052 only)

1.7.1 Load from external memory

(1) OUTLINE

Read the counter data that is written with Management Tool from the USB memory and write it to the main body. To reduce the down-time, it can be executed even during printing.

The counter data for the spare unit not in use is written on the main body and the target units are as follows.

- Charging corona
- Developing suction
- Transfer belt unit
- Transfer belt cleaning unit
- Drum cleaner
- PCC
- Fusing unit

Note

- This function is available only when DIPSW 15-0 is set to ON.

(2) Preparation:

Connect the USB memory to the service port.

Note

- When the counter data file is created in the folder combination mode of Management Tool, save the counter data file in the following folder configuration of the USB memory.

- This is the counter data file name.
[Main Body Serial Number]_ORU_DATA.bin

(3) Procedure

1. Be sure that the ordinary operation screen ^{*1} is displayed.
Press [Utility/Counter] button.
2. "Setting menu screen"
On the Operation panel, press the following buttons.
1→0→C→6→9
3. "ORU-M Counter Rewrite Menu screen"
Press [01 Read from External Memory].

Note

- If the USB memory is not connected to the connection port, the error message appears not to go on to the file selection screen.
4. "ORU-M Counter Rewrite <From External> screen"
Press [Next] or [Back] to select the file to be read and press [OK].

Note

- By pressing [Limit], only the file corresponded to the serial number of the machine appears.

5. "ORU-M Counter Rewrite <From External> screen"

After selecting [Charging Corona]/[Developing Suction]/[Transfer Belt Unit]/[Trans.Belt Cleaning Unit]/[Drum Cleaner]/[PCC]/[Fusing Unit] in "Load Item", check the counter value with [▲]/[▼] and press [Store Selected Items]. Press [Store All Items] to read the counter data of all items.

6. "Pop-up screen"

Press [Yes] to start reading the counter data.

**Note**

- Be sure not to turn OFF the main power switch (SW1) until the reading file completes.

7. "Pop-up screen"

Confirm the message "Completed data loading from external memory" and press [OK].

*1 Default is [Machine Screen].

1.7.2 Store to external memory

(1) Functions

Transfers the counter data of the fusing unit and the intermediate transfer unit from the main body to the USB memory. The saved data can be used in Management Tool.

Note

- This function is available only when DIPSW 15-0 is set to ON.

(2) Preparation:

Connect the USB memory to the service port.

Note

- Be sure to create a folder as shown below beforehand.

(3) Procedure

1. Be sure that the ordinary operation screen ^{*1} is displayed.
Press [Utility/Counter] button.

2. "Setting menu screen"

On the Operation panel, press the following buttons.

1→0→C→6→9

3. "ORU-M Counter Rewrite Menu screen"

Press [02 Store to External Memory].

Note

- If the USB memory is not connected to the connection port, the error message appears not to go on to the file selection screen.

4. "ORU-M Counter Rewrite <To External> screen"

Press [Start Storing].

Note

- When the USB memory is not connected to the connection port, an error message appears.
- Be sure not to turn OFF the main power switch (SW1) until the storing file completes.

5. "Pop-up screen"

A pop-up screen appears after saving completes. Check the file name and press [OK].

6. "ORU-M Counter Rewrite <To External> screen"

Confirm that the screen returns to "ORU-M Counter Rewrite <To External> screen", disconnect the USB memory from the service port.

^{*1} Default is [Machine Screen].

1.8 Management Tool

1.8.1 Outline

"Management Tool" is a software to read and reset the parts counter information of the unit.

(1) Operating environment

The following shows the hardware requirements of the Management Tool.

Applicable OS	Windows 2000 Professional (Service Pack 4 or later versions) Windows XP Professional (Service Pack 3 or later versions) Windows Vista (32bit/64bit) Home Premium/Business/Enterprise/Ultimate (Service Pack 2 or later versions) Windows 7 (32bit/64bit) Home Premium/Professional/Enterprise/Ultimate (Service Pack 1 or later versions)
CPU	Conform to OS recommended environment
Hard disk space	100MB or more
Memory space	Conform to OS recommended environment
Web browser	Microsoft Internet Explorer Ver.6.0 (Service Pack 1 or later versions)
Library	Windows 2000 & Microsoft .NET Framework 2.0 Windows XP & Microsoft .NET Framework 2.0 (SP2) Windows Vista & Microsoft .NET Framework 2.0 (SP2) Windows 7 & Microsoft .NET Framework 2.0 (SP2)
Display	At resolution of 800 x 600 (SVGA) or more 16 bits color or more
Applicable machine	bizhub PRESS C8000 bizhub PRESS C7000 bizhub PRESS C6000 bizhub PRESS 1250 bizhub PRESS 1250P bizhub PRESS 1052

Note

- Compliant OS may be limited depending on the RFID tag reader/writer.

- The applicable machines may be changed by the machine development in the future.

(2) RFID tag reader/writer

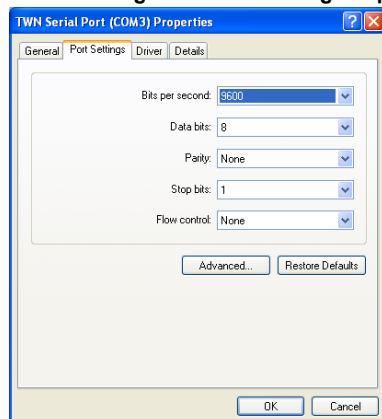

Management Tool uses the RFID tag reader/writer for reading and writing the PFID tag. The following shows the corresponding RFID tag reader/writer.

- "TMRF-1-U001" (Tamura Corporation)
- "TWN3" (Elatec Vertriebs GmbH)
Applicable mode USB
: Transparent Virtual COM Port
V24: Transparent Operation

Note

The driver for the RFID tag reader-writer needs to be installed to the computer beforehand.

- "TMRF-1-U001" (Tamura Corporation)
TmRfid USB driver (Windows 2000/XP)
Vista/7 dedicated USB driver(Windows Vista/7)
- "TWN3" (Elatec Vertriebs GmbH)
TWN Serial Port driver (Windows XP)
- The following shows the setting the port of the TWN Serial Port driver.

Item	Value
bit/sec	9600
Data bit	8
Parity	None
Stop bit	1
Flow control	None

(3) Main functions

The following shows the main functions of the Management Tool.

- Reading/writing RFID tag of unit (bizhub PRESS C8000)
The part information is read from the RFID tag of the unit and displayed on the screen. Select the part whose counter information is reset and write the reset information on the IC tag.
- Reading/writing data file of unit (bizhub PRESS C7000/6000, bizhub PRESS 1250/1250P/1052)
Reads out the part information from the data file of the unit output from the device and displays it on the screen. Select a part whose counter information is reset on the screen, and write the reset information to the data file. (Support to read/write automatically from the USB memory.)
- Work log management
The counter information and the counter reset information caught from the replacement work are saved automatically as a log. On the work log display, the information can be sorted by the read or reset date and searched by the term such as the customer or the technician who executed the replacement. Therefore, the previous works can be checked.
- Output of work information with CSV file
Outputs the work information and work log when replacing in the CSV format file.
- Printing work information
Prints out the work information and work log when replacing.
- Association of the user information and the device
The user information can be associated with the device.
- Export/Import
The work log, user information, and technician information can be exported to the file. Also, the exported file can be imported.
- Serial number setting (bizhub PRESS C8000)
When replacing the tag due to the breakage, new RFID tag can be recognized to the machine.
- Intermediate transfer steering sensor information setting (bizhub PRESS C8000)
The initial value of the intermediate transfer steering sensor can be registered.
- Option
Set each setting of Management Tool.
- Log in mode
To use the Management Tool, login is required.
2 modes are provided for log in; "Administrator mode" and "Technician mode."
[Administrator mode]
Mode when log in as administrator.
[Technician mode]

Mode when log in as technician. The administrator registers the technician.
The operable function differs depending on the log in mode.

No.	Function name	Administrator mode	Technician mode
1	Replacement work	No	Yes
2	Work log	Yes	Yes
3	Register user	Yes	Yes
4	Register technician	Yes	No
5	SetPersonal	No	Yes
6	Administrator Setting	Yes	No
7	Unit Serial Number Setting	No	Yes
8	Intermediate transfer steering sensor information setting	No	Yes
9	Option	No	Yes
10	Version	Yes	Yes

Yes: operable, No: inoperable

1.8.2 Installation of Management Tool

(1) Installation method

Install the Management Tool in the following steps.

Note

- Log on with the user name which has the Administrator authority to install.
- If any application is running on the computer (including anti-virus program), close it.
- Check that "Microsoft .NET Framework 2.0 (SP2)" has been installed on the computer before the installation.

Installation steps

1. Double click the installation program "Setup.exe."
2. Select the language and click [OK].

3. Continue the installation following the instructions on screen.

Note

• Product key input

The Management Tool installer displays the screen to input the product key during installation.

The installation continues when the input product key is proper.

(2) Items to be installed

Once the Management Tool is installed, the following items are registered on the Start menu and the desk top.

Items to be registered for start menu

- Program
- Readme
- Manual

Items to be registered on desktop

- Shortcut of program

Note

- The "Readme" of the Start menu can be set not to be installed.
- Select "Custom" on the set up type and check the items to be installed.
- Whether to create the shortcut of the program registered on the desktop can be selected when installing.

(3) Uninstallation

There are following 2 ways to uninstall the Management Tool.

- Use "Add or Remove Programs" ("Add or Remove Programs" for Windows2000, "Programs and Features" for Windows Vista/7).
- Execute "Setup.exe" again.

Note

- The user information and the data information (Work log, User information, and Technician information) are saved in the following folder separately from Management Tool.
 - 2000/XP:

C:\Documents and Settings\All Users\Application Data\KONICA MINOLTA\Management Tool\

- Vista/7:

C:\Users\Public\Documents\KONICA MINOLTA\Management Tool\

Since those information cannot be deleted by uninstalling, delete them manually.

When reinstalling it without deleting those information, the Management Tool can be started with the information before uninstallation.

- When uninstalling the Management Tool, all Management Tool programs need to be closed.

1.8.3 Starting up of Management Tool

(1) Start

There are following 2 ways to start the Management Tool.

- Start from the Start menu of Windows
Click Windows "Start" button - "All Programs" ("Programs" for Windows2000) - "KONICAMINOLTA" - "Management Tool" - "Management Tool."
- Start from the shortcut icon on the desktop
Double click "KONICA MINOLTA Management Tool" icon created on the desktop.

The login screen appears when it starts.

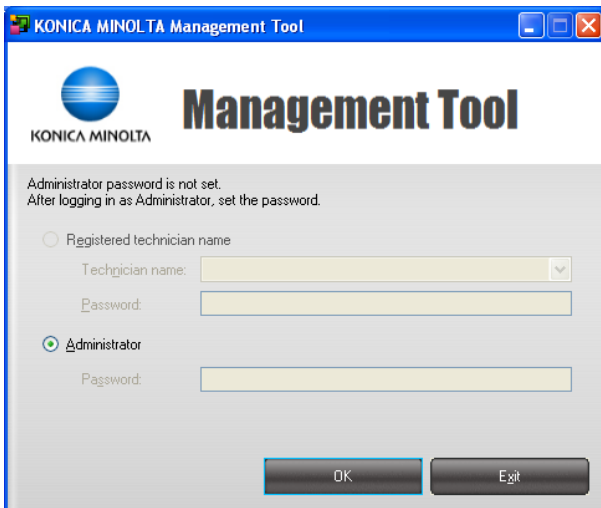

Note

- Whether to create the "KONICA MINOLTA Management Tool" icon or not can be selected when installing.

(2) The login screen

The login screen appears when the Management Tool starts. Select the login mode and enter the required information to log in.

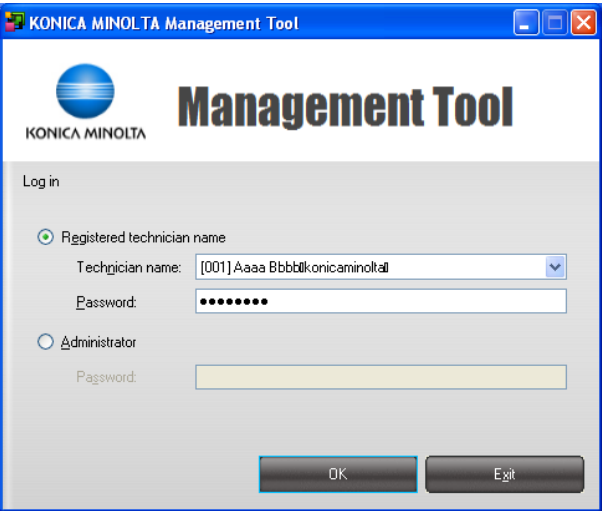

(a) At 1st time of startup

The administrator password has not been set right after the installation. Set the administrator password when the password setting screen appears after clicking [OK] button.

(b) At normal startup

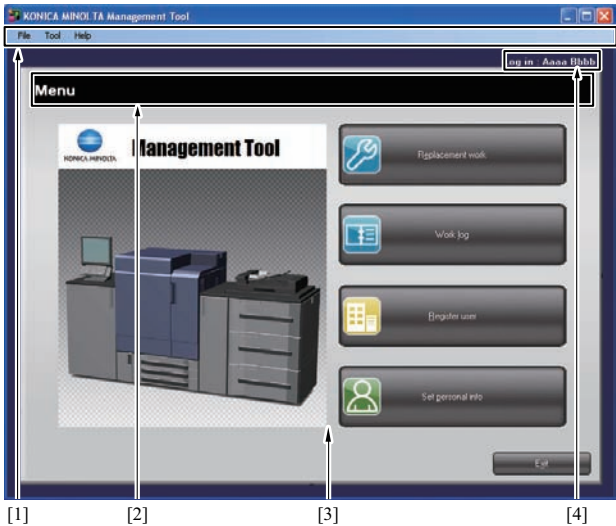

For the replacement work, log in in the technician mode. Select [Registered technician name] and enter the required information to log in.

Note

- The image at the top of the screen can be customized. (Refer to [E.1.8.10.\(4\) Image setting](#))
 - When no technician has been registered, the registered technician name cannot be selected.
- For details of registering technician, [E.1.8.9.\(2\) Register technician](#).

(3) Operation screen

[1]	Menu bar	[2]	Navigation
[3]	Operation area	[4]	Login user

1. Menu bar
Specify each function of the Management Tool. (Refer to [E.1.8.10 Various setting for the software](#))
2. Navigation

[1]	Path	[2]	Image
-----	------	-----	-------

- Path
The transition of screens from the top screen is displayed as the path.
 - Image
The image can be customized. (Refer to: [E.1.8.10.\(4\) Image setting](#))
3. Login user
The current login user is displayed.
 4. Operation area
The operation panel based on the purpose is displayed.

(4) End

- There are following 2 ways to exit the Management Tool.
- Click [Exit] button on the login screen or the top screen

- Select [Exit] from [File] menu
- Click [x] (close) button on the upper right corner of the screen
- Shut down or log off the computer

1.8.4 Technician mode

The operation procedures when logging in as an registered technician is described below.

To execute this mode, register the technician information in the administrator mode. (Refer to [E.1.8.9.\(2\) Register technician](#))

(1) Top screen

When logging in successfully, the top screen is displayed.

- To perform unit parts replacement, click "Replacement work" button. (Refer to [E.1.8.4.\(2\) Replacement work](#))
- To check the work log, click "WorkLog" button. (Refer to [E.1.8.4.\(3\) Work log](#))
- To register the customer information, click "RegisterUser" button. (Refer to [E.1.8.4.\(4\) Register user](#))
- To change the password or edit the memo, click "Set personal info" button. (Refer to [E.1.8.4.\(5\) SetPersonal](#))

Note

- The image at the left of the screen can be customized. (Refer to [E.1.8.10.\(4\) Image setting](#))

(2) Replacement work

Perform unit parts replacement.

(a) Type of replacement

Depending on the machine type, the form and media of data differ.

Management Tool is applied to the following machines.

- bizhub PRESS C8000 (Refer to [E.1.8.5 bizhub PRESS C8000 replacement procedure](#))
- bizhub PRESS C7000/6000P (Refer to [E.1.8.6 bizhub PRESS C7000/6000 replacement procedure](#))
- bizhub PRESS 1250/1250P/1052 (Refer to [E.1.8.7 bizhub PRESS 1250/1250P/1052 replacement procedure](#))

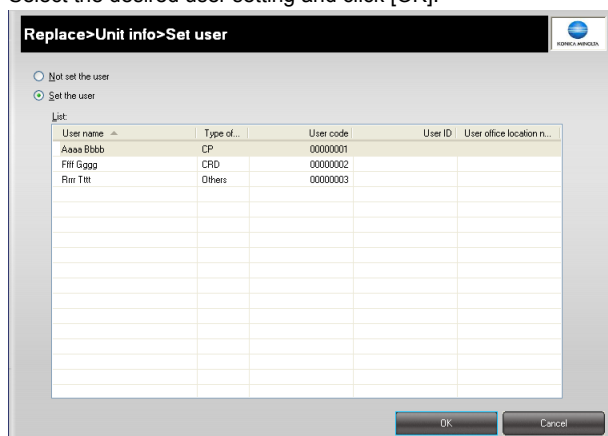

(b) Associating customers

When the device serial number and the user information are properly associated, the user information is displayed on the operation information automatically.

When not set, " (No User Setting)" is displayed.

To modify the association between the unit read and the user, conduct the following procedures.

- Click "Change" to display the user setting screen.
- Select the desired user setting and click [OK].

The user setting of the work information is changed.

Note

- For details on user registration, refer to [E.1.8.4.\(4\) Register user](#).

(c) Export the csv format file

The detailed information of the unit currently displayed is exported in CSV format.

1. Specify the location to store the file.

2. Click [Save].

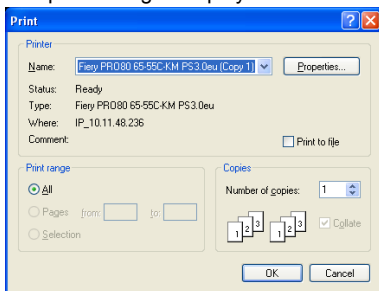

The CSV file is exported to the specified location.

For details on CSV format, refer to [E.1.8.10.\(6\) Export CSV](#).

(d) Printing the report

The detailed information of the unit currently displayed can be printed as report.

1. The print dialog is displayed.

2. Click [OK].

The report is printed.

For details on print layout, refer to [E.1.8.10.\(7\) Print Report](#).

(3) Work log

The work conditions of previous replacement work can be checked.

(a) Procedures to display the work log list

1. Click "Work log" on the top screen.
Or select "Work log" in "Tool" menu.
2. The work log referring method selection screen appears.
 - To display the work log by selecting the user, click "Select user."
Proceed to [step 3](#).
 - To display the work log by selecting the technician, click "Select technician."
Proceed to [step 4](#).
 - To display all the work log, click "All."
Proceed to [step 5](#).

3. The "Select user" screen appears.

Select the user to check the work log, and click "OK."

Proceed to [step 5](#).

4. The "Select technician" screen appears.

Select the technician to check the work log, and click "OK."

Proceed to [step 5](#).

5. The work log list is displayed.

On the work log list, filtering by conditions or sorting displayed items is available. Select the work log information to check its detail, export as CSV or print report.

Unit type	Times of...	Unit remov...	Count read date	Count reset date	The last undo
Fusing	0	-	2/9/2010 11:41:20	-	-
Fusing	0	-	2/9/2010 11:57:36	-	-
2nd transfer	0	-	2/9/2010 2:21:32 PM	-	-
Fusing	0	-	2/9/2010 2:21:41 PM	-	-
2nd transfer	0	-	2/9/2010 2:24:10 PM	-	-
Fusing	0	-	2/9/2010 2:24:24 PM	2/9/2010 2:35:06 PM	-
Fusing	0	-	2/9/2010 2:36:16 PM	2/9/2010 2:48:57 PM	-
2nd transfer	0	-	2/9/2010 2:36:28 PM	-	-

For the display filter, the displayed contents differs depending on the display method selected on the work log reference method in step 2.

When selecting "Select user":

When selecting "Select technician":

Note

- The items can be sorted in descending/ascending order by clicking the item name of the work log list. The mark ▲ indicates that the current display is in ascending order. Click it to change in descending order.

Unit type	Times of replacement	Unit removal date	Count read ...	Count reset date	The last ur
Fusing	0	-	2/9/2010 11:57:36...	-	-
2nd transfer	0	-	2/9/2010 2:21:32 ...	-	-

- On the work log list screen, the items to be displayed and their display width can be changed via "Set list view". (Refer to [E.1.8.10.\(5\) Set list view](#))
- Click [Export CSV] to export the work log information currently selected in CSV format. (Refer to [E.1.8.10.\(6\) Export CSV](#))
- Click [Print] to print the report of the work log information currently selected. (Refer to [E.1.8.10.\(7\) Print Report](#))

(b) Detailed information

The detailed information of the replacement work log selected on the work log list is displayed.
Change the user to be associated or edit the work information memo.

Note

- Click [Back] or [Next] to switch the work log displayed.
- Click [Export CSV] to export the work log information currently displayed in CSV format. (Refer to [E.1.8.10.\(6\) Export CSV](#))
- Click [Print] to print the report of the work log information currently displayed. (Refer to [E.1.8.10.\(7\) Print Report](#))
- For details on user association, refer to [E.1.8.4.\(2\).\(b\) Associating customers](#).

(c) Import

Import the work log which is exported from Management Tool.

1. Specify the storage location of the work log file to import.

2. Click [Open].
3. The password input screen is displayed.
Enter the password set on the work log file when it was exported.

4. Click [OK].
The work log file is imported.

Note

- Use one-byte alphanumeric characters and symbols for password.
- The work log information already exists is not imported.
- The invalid work log information is skipped and the import process continues.
- The work log exported by other computer also can be imported. However it happens that the work log information is overlapped.

(d) Export

Export the work log collectively.

1. Specify the location to store the file.

2. Click [Save].
3. The password input screen is displayed.
Set the password on the export file.

4. Click [OK].
The export of the work log starts.

Note

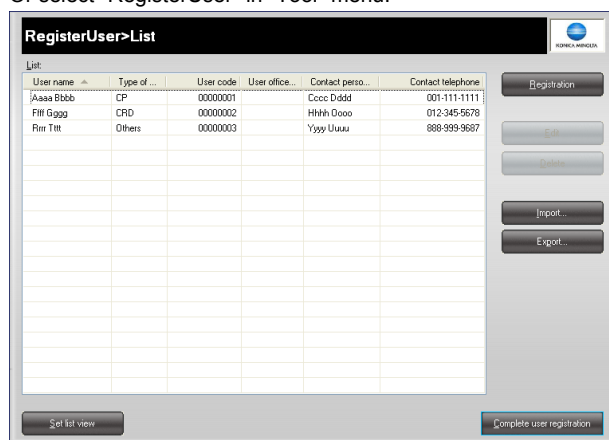

- Use one-byte alphanumeric characters and symbols for password.
- The password set on the export file is required when importing it.
- The file format "Work log file" is a format to display the contents on the Management Tool. When the file is stored in other format, the file is unable to open on the Management Tool.

(4) Register user

Register, edit or delete the user information.

(a) User list

Click [RegisterUser] on the top screen.
Or select "RegisterUser" in "Tool" menu.

Note

- The items can be sorted in descending/ascending order by clicking the item name of the user information list. The mark ▲ indicates that the current display is in ascending order. Click it to change in descending order.

User name ▲	Type of ...	User code	User office...	Contact perso...	Contact telephone
Aaaa Bbbb	CP	00000001		Cccc Dddd	001-111-1111
Ffff Gggg	CRD	00000002		Hhhh Oooo	012-345-5678
Rrrr Tttt	Others	00000003		Yyyy Uuuu	888-999-9687

- On the user information list screen, the items to be displayed and their display width can be changed via "Set list view". (Refer to [E.1.8.10.\(5\) Set list view](#))

(b) Initial registration

Register the user information.

1. Click [New] on the user list screen.
2. The registration screen is displayed.
3. Enter "User name."
Use 1 to 64 characters regardless of whether one-byte or two byte.
4. Select "Type of business."
5. Enter the following items if necessary.
 - Enter "User code." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Enter "User ID." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Enter "User office location name." Use 0 to 256 characters regardless of whether one-byte or two byte.
 - Enter "User office location code." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Enter "Contact person name." Use 0 to 64 characters regardless of whether one-byte or two byte.
 - Enter "Contact person ID no." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Enter "Contact telephone." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Register "Machine list".
Enter "Machine serial number to add." Use 1 to 13 one-byte alphanumeric characters and symbols. Click "Add" to add it to "Machine list".
Select and click the serial number to delete from "Machine list".
 - Enter "Remark."
6. Click [Register].
The entered user information is registered and the next user information can be registered.

Note

- **Register the serial number of the machine of the user to "Machine list" so that the user information is automatically associated when reading unit information while in the replacement work.**

(c) Edit

Edit a registered user information.

1. Edit the items to be changed.
For entering each items, refer to [E.1.8.4.\(4\).\(b\) Initial registration](#).
2. Click [OK].
The edited result is reflected to the user information.

(d) Import

Import the user information which is exported from Management Tool.

1. Specify the storage location of the user information file to import.

2. Click [Open].
The user information file is imported.

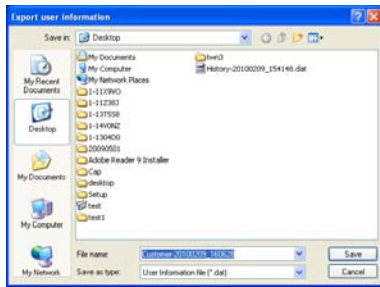

Note

- **The user information already exists is not imported.**

(e) Export

Export the user information collectively.

1. Specify the location to store the file.

2. Click [Save].
The export of the user information starts.

Note

- The file format "User Information file" is a format to display the contents on the Management Tool. When the file is stored in other format, the file is unable to open on the Management Tool.

(5) SetPersonal

Change the password of login technician or edit the comment.

(a) Password Change

1. Click "Password change."
The password change screen is displayed. The password can be changed at this time.

2. Click [OK].
The new Password is set.

Note

- Use one-byte alphanumeric characters and symbols for password.

(6) Serial number setting (bizhub PRESS C8000)

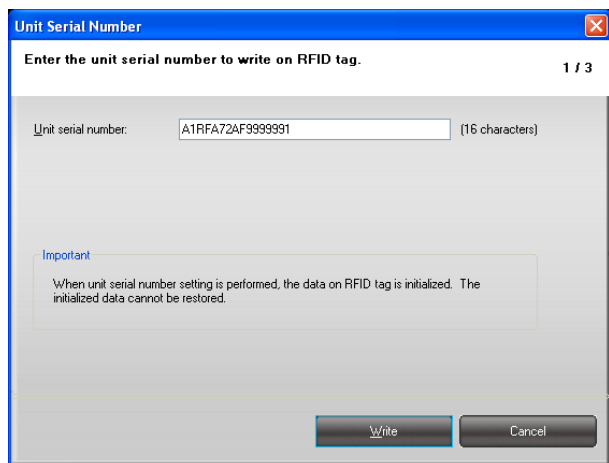

The unit serial number is written in the RFID tag.

Note

- When replacing the RFID tag because of such as physical damage, the new RFID tag can be recognized by the unit.

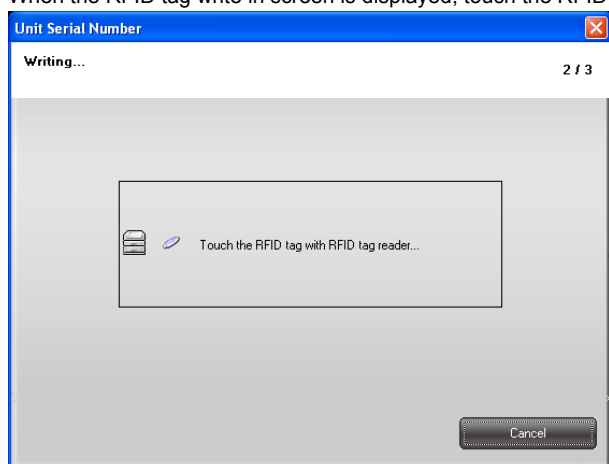

(a) Procedures of the unit serial number setting

1. Select "Unit Serial Number" from "Tool" menu.
When the RFID tag reader is not recognized, the process does not proceed to step 2. Check that the RFID tag reader is correctly connected.
2. The wizard starts up and the unit serial number input screen is displayed.
Enter the unit serial number and click "Write."

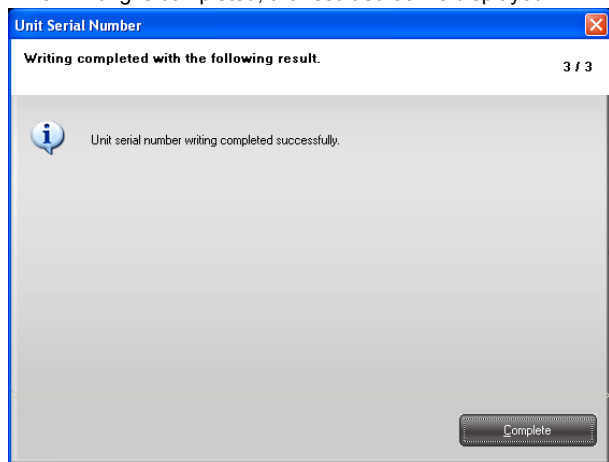

**Note**

- **Serial number setting initializes the RFID tag data. The initialized data cannot be restored.**

3. When the RFID tag write in screen is displayed, touch the RFID tag with the RFID tag reader.

4. When writing is completed, the result screen is displayed.

(7) Intermediate transfer steering sensor information setting (bizhub PRESS C8000)

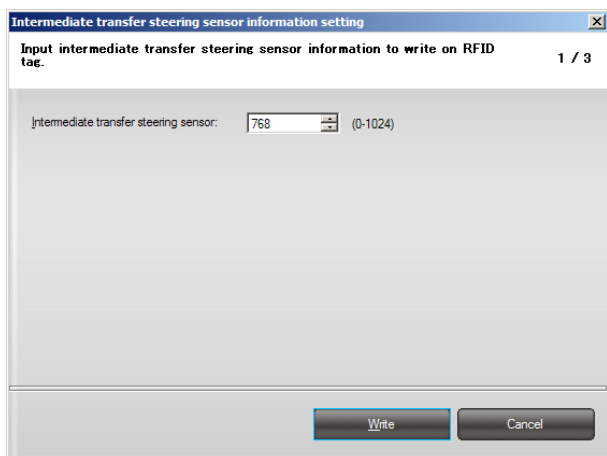

The initial value of the intermediate transfer steering sensor is written to the RFID tag.

(a) Procedures of the intermediate transfer steering sensor information setting

1. Select "Intermediate transfer steering sensor information setting" from "Tool" menu.

Note

- **When the RFID tag reader is not recognized, the process does not proceed to step 2. Check that the RFID tag reader is correctly connected.**
2. Wizard is activated and the intermediate transfer steering sensor information input screen appears.

Input the intermediate transfer steering sensor information and click "Write".

3. When the RFID tag write in screen is displayed, touch the RFID tag with the RFID tag reader.

Note

- Touch the RFID tag in which the data of the intermediate transfer unit is saved.

4. When writing is completed, the result screen is displayed.

(8) Option

Set each setting of Management Tool.

(a) Display a confirmation message when selecting a part to be replaced of the bizhub PRESS C7000/6000, 1250/1250P/1052.

Select whether to display the message to confirm the target unit after selecting the part at the replacement of the bizhub PRESS C7000/6000, 1250/1250P/1052.

(b) Locate the data file of the bizhub PRESS C7000/6000, 1250/1250P/1052 in the USB memory.

Set the activation mode of the replacement of the bizhub PRESS C7000/6000, 1250/1250P/1052.

- When the box is checked, the replacement is activated in USB memory cooperation mode.
- When the box is not checked, the replacement is activated in folder cooperation mode.

1.8.5 bizhub PRESS C8000 replacement procedure

1. Click "Replacement work" on the top screen.

Or select "Replacement work" in "Tool" menu.

When the RFID tag reader is not recognized, the process does not proceed to step 2. Check that the RFID tag reader is correctly connected.

2. A screen to select machine type appears.

Select "bizhub PRESS C8000" and click [OK] button.

Proceed to step 3.

When the RFID tag reader is not recognized, the process does not proceed to step 3. Check that the RFID tag reader is correctly connected.

3. When the unit read screen is displayed, touch the RFID tag with the RFID tag reader.

4. When read successfully, the unit information screen is displayed.
The units read are listed on the left of the screen as buttons.

Note

- When selecting the intermediate transfer belt of the intermediate transfer unit, the intermediate transfer belt information screen is displayed.
Be sure to input the reflectance value which is written on the belt.

Intermediate transfer belt information

Enter intermediate transfer belt information.

Front: 2500 (2000-3500)

Rear: 3000 (2000-3500)

OK Cancel

6. Click "Reset count".

When the count reset screen is displayed, touch the RFID tag with the RFID tag reader.

7. When count reset is done successfully, the unit information screen is updated.

8. When canceling the count reset, Click "Undo reset count."

When the canceling count reset screen is displayed, touch the RFID tag with the RFID tag reader. The count information returns to the condition when it was read.

9. To read information of another unit, click "Read another."
→ Return to step3.

Note

- Information of up to 10 units can be read at a time of each replacement work.
When reading information of more than 10 units, exit the replacement work once and select "Replacement work " on the top screen again.
- While in replacement work, the Management Tool cannot be exited.
To exit the Management Tool, exit the replacement work.

1.8.6 bizhub PRESS C7000/6000 replacement procedure

Note

- Depending on the saving destination of the cooperated counter data, there are 2 modes for the replacement on the bizhub PRESS C7000/6000.
 - USB cooperation mode:
Execute the counter reset directly to the counter data that is read from the main body to the USB memory with the "Save to External Memory" of ORU-M.
 - Folder cooperation mode:
Move the counter data read from the main body to the USB memory to the folder of the client PC once and execute the counter reset to the counter data in the folder with the "Save to External Memory" of ORU-M.
- It is activated in the mode of the previous replacement, but the mode can be selected with "Option" (Refer to [E.1.8.4.\(8\) Option](#)). (Default is USB cooperation mode.)

1. Click "Replacement work" on the top screen.
Or select "Replacement work" in "Tool" menu.
2. A screen to select machine type appears.

Select "bizhub PRESS C7000/6000" and click [OK] button.
Proceed to step 3.

Note

- When it is activated in the USB cooperation mode and the USB memory in which the data file is saved cannot be recognized, the following warning appears. Select [Yes (Y)] to activate in the folder cooperation mode.

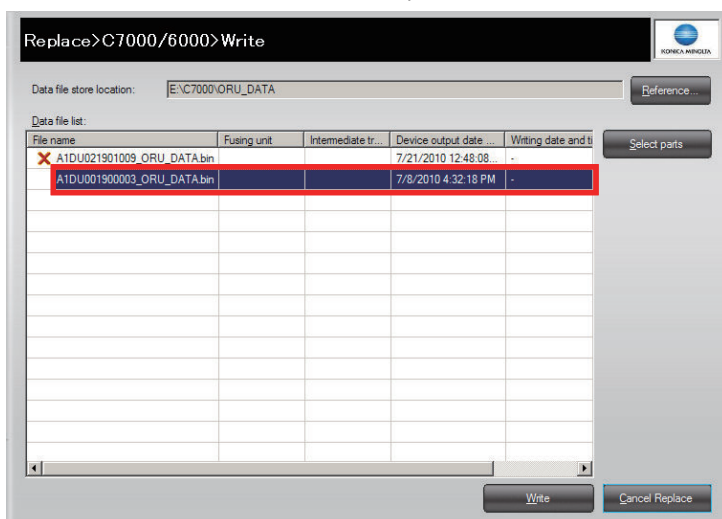

3. Once the reading the data file of the USB memory or the folder completes, the writing screen appears. The read files are shown in a list on the center of the screen.

Note

- When it is activated in the folder cooperation mode, it cooperates with the folder of the previous replacement.

4. Select the data file which includes the unit to be replaced from the read data files and click "Select parts".

Note

- The unit with "blank" is the target unit of the replacement.
- The display of the unit column shows the condition of the unit.
 - Blank:
Unit whose part information is exported from the device (target to replace)
 - Completed editing:
Unit whose part to be reset the count has been selected, or whose unit serial number has been set
 - Already written.:
Unit whose part to be reset the count has been written in the data file
 - Already imported the device.:
Unit whose part information has been imported to the device
- For the unit with "Already imported the device." on the column, the part to be reset the count cannot be selected.

5. Once the reading of unit completes, the part selection screen appears.
The units read are listed on the left of the screen as buttons.

On the parts selecting screen, the unit serial number (alphanumeric characters in 16-digit) can be input.
Blank is also available when the serial number is not needed.

Intermediate Transfer Unit

Serial number: LA1RFA72L9999996

Name	Part No.	Qty	Count	Life cycle
------	----------	-----	-------	------------

Conduct the same operation to all units to be replaced.

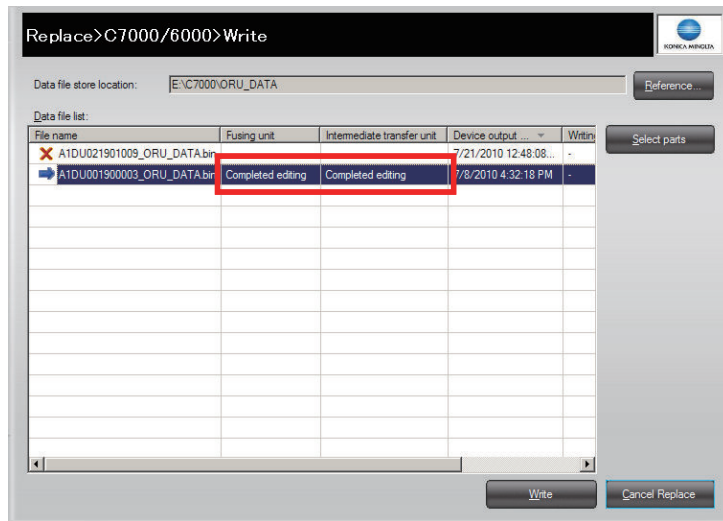

Note

- Writing to data file is not executed by clicking the "Back to writing screen" on the parts selecting screen. Writing to the data file is executed on the writing screen. For details, refer to the steps 7 and more.

- The input unit serial number is reflected when you return to the writing screen and write the data file. The display is not updated during inputting and editing the number. The serial number displayed on the button on the left of the screen and the unit/machine information shows the old information before inputting the number.

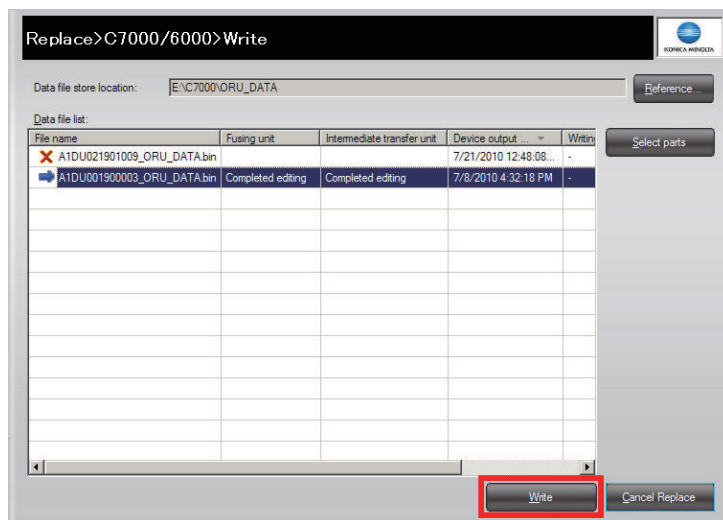

7. Writing screen appears.

Confirm that the unit with part selected is "Completed editing".

8. Repeat steps 4 to 7 to all data files which include the unit to be replaced.

9. Click "Write" button.

Note

- Click "Reference" button of the writing screen and select the folder to switch to the folder cooperate mode.
- In the next replacement, it is activated in the mode of the previous replacement. This mode can be switched with "Option" (Refer to [E.1.8.4.\(8\) Option](#)).

10. A writing confirmation message appears and "Completed editing" unit is written in the data file of the USB memory or the PC folder. Then, the replacement completes.

In the USB cooperate mode, once the replacement completes, the USB memory can be removed safely.

* Pop-up screen in the USB cooperation mode

* Pop-up screen in the folder cooperation mode

Note

- Be sure not to disconnect the USB memory until the writing completes since it takes time to complete writing to the USB memory in the USB cooperation mode.
- When the USB memory failed to be removed safely, writing to data file may not complete properly. Confirm that no other program uses the USB memory and write to the data file again.
- In the folder cooperate mode, be careful not to mistake the import data when cooperating with the C7000/6000 main body.
- While in replacement work, the Management Tool cannot be exited.
To exit the Management Tool, exit the replacement work.

1.8.7 bizhub PRESS 1250/1250P/1052 replacement procedure**Note**

- Depending on the destination of the cooperated counter data, there are 2 modes for the replacement on the bizhub PRESS 1250/1250P/1052.
 - **USB cooperation mode:**
Execute the counter reset directly to the counter data read from the main body to the USB memory with the "Save to External Memory" of ORU-M (Refer to [E.1.7.2 Store to external memory](#)).
 - **Folder cooperation mode:**
Move the counter data read from the main body to the USB memory to the folder of the client PC once and execute the counter reset to the counter data in the folder with the "Save to External Memory" of ORU-M (Refer to [E.1.7.2 Store to external memory](#)).
 - It is activated in the mode of the previous replacement, but the mode can be selected with "Option" (Refer to [E.1.8.4.\(8\) Option](#)). (Default is USB cooperation mode.)
1. Click "Replacement work" on the top screen.
Or select "Replacement work" in "Tool" menu.
 2. A screen to select machine type appears.

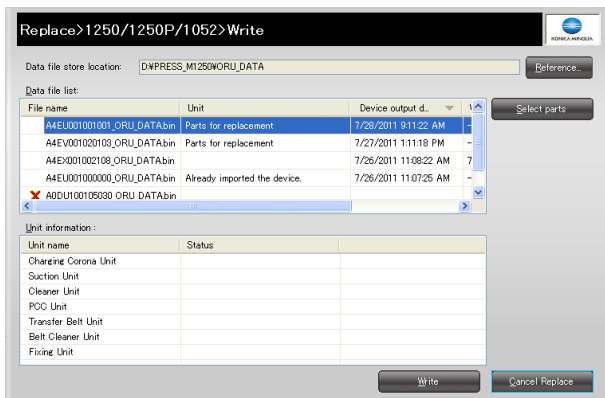

Select "bizhub PRESS 1250/1250P/1052" and click [OK] button.
Proceed to step 3.

Note

- When it is activated in the USB cooperation mode and the USB memory in which the data file is saved cannot be recognized, the following warning appears. Select [Yes (Y)] to activate in the folder cooperation mode.

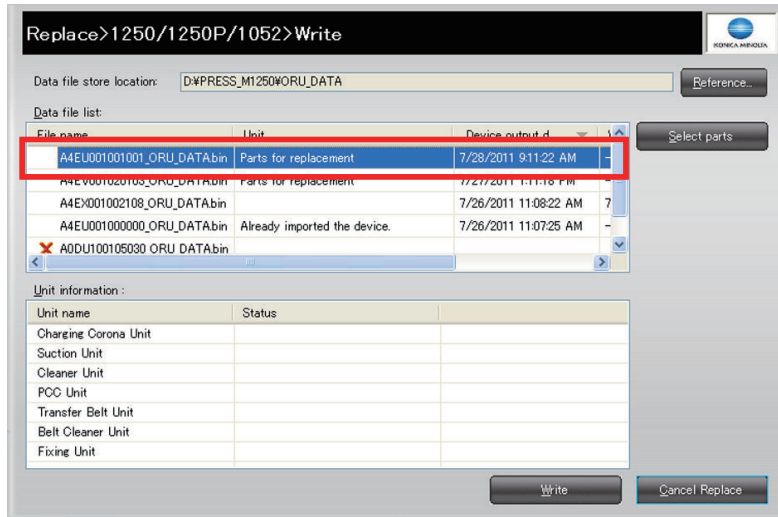

3. Once the reading the data file of the USB memory or the folder completes, the writing screen appears. The read files are shown in a list on the upper in the center of the screen. Also the unit information of the data files selected in the data file list is shown in a list on the lower in the center of the screen.

**Note**

- When it is activated in the folder cooperation mode, it cooperates with the folder of the previous replacement.

4. Select the data file which includes the unit to be replaced from the read data files and click "Select parts".

Note

- The data file with "Parts for replacement" on the unit column has the target unit of the replacement (the part whose count to be reset).
 - The display of the unit column shows the condition of the all units which are stored in the data file.
 - Blank:
Data file which has the unit whose part information has been exported from the device, or the unit which has been written. Although the target unit of the replacement does not exist, the part whose count to be reset can be selected, and the unit serial number can be set.
 - Parts for replacement:
Data file which has the target unit of the replacement in the unit whose part information has been exported from the device, or in the unit which has been written. The unit whose count to be reset can be selected, and the unit serial number can be set.
 - Unit includes parts which was replaced:
Data file which has the unit whose part to be reset the count has been selected, or whose unit serial number has been set.
 - Already imported the device.:
Data File which has the all units whose part information are imported to the device.
 - The unit with "blank" on the status column of the unit information list is the target unit of the replacement.
 - The display of the status column shows the condition of the unit.
 - Blank:
Unit whose part information is exported from the device (target to replace)
 - Completed editing:
Unit whose part to be reset the count has been selected, or whose unit serial number has been set
 - Already written.:
Unit whose part to be reset the count has been written in the data file
 - Already imported the device.:
Unit whose part information has been imported to the device
 - For the unit with "Already imported the device." on the status column of the unit information list, the part whose count to be reset cannot be selected.
5. Once the reading of unit completes, the part selection screen appears.
The units read are listed on the left of the screen as buttons.

In the replacement of the bizhub PRESS C7000/6000, 1250/1250P/1052, back up the data file at writing to the data file.

Note

- If the wrong information is written with Management Tool, take back the backup file to the writing folder to recover the information.
- When several writings are executed to 1 data file, the data to be recovered is the data file which written before the last writing.
- For the backup file in the USB cooperation mode, a backup folder is created automatically and saved in the ORU-DATA folder.
- For the backup file in the folder cooperation mode, a backup folder is created automatically and saved in the folder that is the same as the data file.

1.8.9 Administrator mode

Set the required information of the Management Tool.

(1) Top screen

When logging in successfully, the top screen is displayed.

- To check the work log, click "WorkLog" button. (Refer to [E.1.8.9.\(3\) Administrator Setting](#))
- To register the customer information, click "RegisterUser" button. (Refer to [E.1.8.4.\(4\) Register user](#))
- To register a technician, click "RegisterTech" button. (Refer to [E.1.8.9.\(2\) Register technician](#))
- To change the administrator password, click "Admin.setting" button. (Refer to [E.1.8.9.\(3\) Administrator Setting](#))

(2) Register technician

Register, edit or delete the technician information.

(a) Technician list

Click [RegisterTech] on the top screen.
Or select "RegisterTech" in "Tool" menu.

RegisterTech>List

Registration no.	Technician name	Technician code	Company name	Service office name
001	Aaaa Bbbb	000000001	konicaminolta	
002	Cccc Dddd	000000002	konicaminolta	
003	Ffff Gggg	000000003	konicaminolta	
004	Eeee Mmmm	000000004	konicaminolta	
005	Hhhh Uuuu	000000005	konicaminolta	
006	Vvvv Tttt	000000006	konicaminolta	

Buttons: Registration, Edit, Delete, Import, Export, Set list view, Complete technician registration

Note

- The items can be sorted in descending/ascending order by clicking the item name of the technician information list. The mark ▲ indicates that the current display is in ascending order. Click it to change in descending order.

Registration no.	Technician name	Technician code	Company name	Service office name
▲ 001	Aaaa Bbbb	000000001	konicaminolta	
002	Cccc Dddd	000000002	konicaminolta	

- On the technician information list screen, the items to be displayed and their display width can be changed via "Set View". (Refer to [E.1.8.10.\(5\) Set list view](#))

(b) Initial registration

Register a new technician information.

The items with "*" must be filled.

RegisterTech>List>New

Registration No. 007 [* Must item]

Technician name: Pppp Kkkk

Password: *****

Password (confirmation): *****

Technician code: 000000007

Country: Japan

Company name: konicaminolta

Company code:

Service office name:

Service office code:

Generate a password

Generated password: Issue password

Buttons: Set password, Copy, Registered, Exit

- Enter "Technician name."
Use 1 to 64 characters regardless of whether one-byte or two byte.
- Enter "Password" and "Password (confirmation)."
Use one-byte alphanumeric characters and symbols for password.
- Enter "Country."
Use 1 to 128 characters regardless of whether one-byte or two byte.
- Enter "Company name."
Use 1 to 256 characters regardless of whether one-byte or two byte.
- Enter the following items if necessary.
 - Enter "Technician code." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Enter "Company code." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Enter "Service office name." Use 0 to 256 characters regardless of whether one-byte or two byte.
 - Enter "Service office code." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - "Generate a password"

By clicking "Generate a password", a password is generated automatically.
Click "Set password" to set the password automatically generated to the "Password" and "Password (confirmation)." Click "Copy" to copy the password automatically generated to the clipboard.
- Click [Registered].
The entered technician information is registered and the next technician information can be registered.

Note

- Registration No. is determined automatically.

(c) Edit

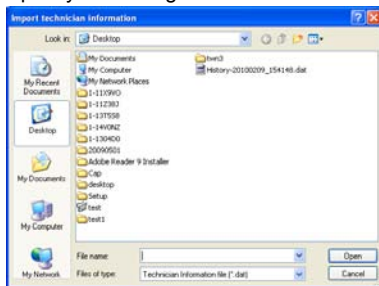

Edit a registered technician information.

1. Edit the items to be changed.
 - Edit "Technician name." Use 1 to 64 characters regardless of whether one-byte or two byte.
 - Edit "Technician code." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Edit "Country." Use 1 to 128 characters regardless of whether one-byte or two byte.
 - Edit "Company." Use 1 to 256 characters regardless of whether one-byte or two byte.
 - Edit "Company code." Use 0 to 32 one-byte alphanumeric characters and symbols.
 - Edit "Service office name." Use 0 to 256 characters regardless of whether one-byte or two byte.
 - Edit "Service office code." Use 0 to 32 one-byte alphanumeric characters and symbols.
2. Click [OK].
The edited result is reflected to the technician information.

(d) Import

Import the technician information which is exported from Management Tool.

1. Specify the storage location of the technician information file to import.

2. Click [Open].
The technician information file is imported.

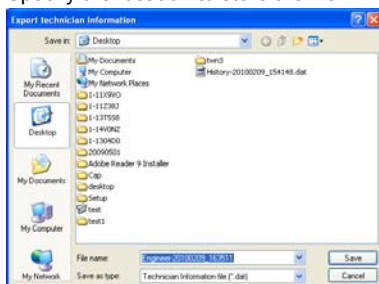

Note

- The technician information already exists is not imported.

(e) Export

Export the technician information collectively.

1. Specify the location to store the file.

2. Click [Save].
The export of the technician information starts.

Note

- The file format "Technician Information file" is a format to display the contents on the Management Tool. When the file is stored in other format, the file is unable to open on the Management Tool.

(3) Administrator Setting

Change the administrator password.

1. Enter the current password and the new password.
2. Click [OK].

The new Password is set.

Note

- Use one-byte alphanumeric characters and symbols for password.

1.8.10 Various setting for the software

(1) File menu

(a) Import

- Work log
Select "Work log" from "Import" in the "File" menu to load the work log which has been exported with the Management Tool. (Refer to [E.1.8.4.\(3\).\(c\) Import](#))

Note

- It is available only from the top screen or the Work log screen.

- User information
Select "User information" from "Import" in the "File" menu to load the user information which has been exported with the Management Tool. (Refer to [E.1.8.4.\(4\).\(d\) Import](#))

Note

- It is available only from the top screen or the Register user screen.

- Technician information
Select "Technician information" from "Import" in the "File" menu to load the technician information which has been exported with the Management Tool. (Refer to [E.1.8.9.\(2\).\(d\) Import](#))

Note

- This menu is displayed when logging in as an administrator.
- It is available only from the top screen or the Technician information screen.

(b) Export

- Work log
Select "Work log" from "Export" in the "File" menu to store the collective work log as a file. (Refer to [E.1.8.4.\(3\).\(d\) Export](#))

Note

- It is available only from the top screen or the Work log screen.

- User information
Select "User information" from "Export" in the "File" menu to store the collective user information as a file. (Refer to [E.1.8.4.\(4\).\(e\) Export](#))

Note

- It is available only from the top screen or the Register user screen.

- Technician information
Select "Technician information" from "Export" in the "File" menu to store the collective user information as a file. (Refer to [E.1.8.9.\(2\).\(e\) Export](#))

Note

- This menu is displayed when logging in as an administrator.
- It is available only from the top screen or the Register technician screen.

(2) Tool menu

The functions in "Tool" are available only from the top screen.

(a) Replacement work

Select "Replacement work" in "Tool" menu to perform unit parts replacement. (Refer to [E.1.8.4.\(2\) Replacement work](#))

Note

- This menu is displayed when logging in to the technician mode.

(b) Work log

Select "Work log" from "Tool" to check the work log. (Refer to [E.1.8.4.\(3\) Work log](#))

(c) Register user

Select "Register user" in "Tool" menu to check, register, edit, or delete user information. (Refer to [E.1.8.4.\(4\) Register user](#))

(d) SetPersonal

Select "Set personal info" in "Tool" menu to change the password of login technician or edit comments. (Refer to [E.1.8.4.\(5\) SetPersonal](#))

Note

- This menu is displayed when logging in to the technician mode.

(e) Unit Serial Number Setting

Select "Unit Serial Number" from "Tool" menu to write the unit serial number in the RFID tag. (Refer to [E.1.8.4.\(6\) Serial number setting \(bizhub PRESS C8000\)](#))

Note

- This menu is displayed when logging in to the technician mode.

(f) Intermediate transfer steering sensor information setting

The default value of the intermediate transfer steering sensor can be written in the RFID tag by selecting "Intermediate transfer steering sensor information setting" from "Tool" menu. (Refer to [E.1.8.4.\(7\) Intermediate transfer steering sensor information setting \(bizhub PRESS C8000\)](#))

Note

- This menu is displayed when logging in to the technician mode.

(g) Option

Each item of Management Tool can be set by selecting "Option" from "Tool" menu. (Refer to [E.1.8.4.\(8\) Option](#))

Note

- This menu is displayed when logging in to the technician mode.

(h) Register technician

Select "Register technician" in "Tool" menu to check, register, edit, or delete technician information. (Refer to [E.1.8.9.\(2\) Register technician](#))

Note

- This menu is displayed when logging in as an administrator.

(i) Administrator Setting

Select "Administrator Setting" in "Tool" menu to change the password of administrator. (Refer to [E.1.8.9.\(3\) Administrator Setting](#))

Note

- This menu is displayed when logging in as an administrator.

(3) Help menu**(a) Version**

Select "Version" in the "Help" menu to display version information of the Management Tool.

Note

- The image at the top of the screen can be customized. (Refer to [E.1.8.10.\(4\) Image setting](#))

(4) Image setting**(a) Navigation**

"70 x 40 (pixels)" image display area of is provided in the navigation view area. An image to be displayed here can be customized by users.

Item	Description
Supported file type	GIF, JPG, JPEG, BMP, PNG
Image size	Image size is arbitrary. *1
Display method	Custom image to be displayed is enlarged or reduced to the area size (70 x 40).
File Name	Navigation. (extension *2)
Stored location	(Install directory)\Images
Remark	When a file exists, a custom image is displayed. *3

*1 70 x 40 (pixels) size is recommended.

*2 For extension, refer to "Supported file type."

When a file does not exist, a default image shown above is displayed.

(b) Log in screen

"480 x 90 (pixels)" image display area of is provided on the login screen. An image to be displayed here can be customized by users.

Item	Description
Supported file type	GIF, JPG, JPEG, BMP, PNG
Image size	Image size is arbitrary. *1
Display method	Custom image to be displayed is enlarged or reduced to the area size (480 x 90).
File Name	Login.(extension*2)
Stored location	(Install directory)\Images
Remark	When a file exists, a custom image is displayed. *3

*1 480 x 90 (pixels) size is recommended.

*2 For extension, refer to "Supported file type."

When a file does not exist, a default image shown above is displayed.

(c) Top screen

"350 x 365 (pixels)*1" image display area of is provided on the login screen (when the main window size is 800 x 600*2). An image to be displayed here can be customized by users.

Item	Description
Supported file type	GIF, JPG, JPEG, BMP, PNG
Image size	Image size is arbitrary. *1
Display method	Custom image to be displayed is enlarged or reduced to the area size (350 x 365).
File Name	TopMenu.(extension*3)
Stored location	(Install directory)\Images
Remark	When a file exists, a custom image is displayed. *4

*1 350 x 365 (pixels) size is recommended.

*2 Image size (350 x 365) is default value. The image is displayed by enlarged or reduced in accordance with the window size.

*3 For extension, refer to "Supported file type."

When a file does not exist, a default image shown above is displayed.

(d) Version information screen

"460 x 150 (pixels)" image display area of is provided on the version information screen.

An image to be displayed here can be customized by users.

Management Tool

Item	Description
Supported file type	GIF, JPG, JPEG, BMP, PNG

Image size	Image size is arbitrary. *1
Display method	Custom image to be displayed is enlarged or reduced to the area size (460 x 150).
File Name	Version.(extension)*2)
Stored location	(Install directory)\Images
Remark	When a file exists, a custom image is displayed. *3

*1 460 x 150 (pixels) size is recommended.

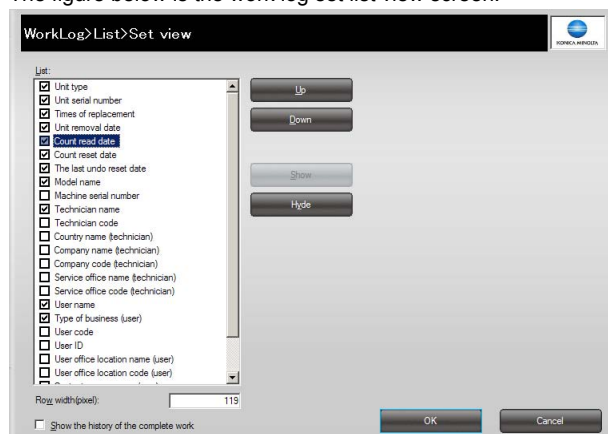

*2 For extension, refer to "Supported file type."

When a file does not exist, a default image shown above is displayed.

(5) Set list view

The items to be displayed and the display width can be changed.

1. Click [Set list view].
2. The set list view screen is displayed.
The items to be displayed differs among screens.
The figure below is the work log set list view screen.

3. Set show/hide of items by checking in the list.
 - Items with check are displayed.
 - The setting can be changed by clicking [Show]/[Hide] on the right of the screen.
4. Set other conditions if necessary.
 - Selected column width: Specify the display width by entering desired value. It can be specified by 0 to 999.
 - [Top] :Item display order is moved to top.
 - [Bottom] :Item display order is moved to bottom.
5. Click [OK].
The set list view is updated.

(6) Export CSV

The format of the CSV file exported by the Management Tool is as follows.

Output items

Common information (Replacement work information)		
No	Item	Description
1	User name	The user name associated to replacement work is exported.
2	Type of business (user)	The type of business associated to replacement work is exported.
3	User code	The user code associated to replacement work is exported.
4	User ID	The user ID associated to replacement work is exported.
5	User office location name (user)	The user office location name associated to replacement work is exported.
6	User office location code (user)	The user office location code associated to replacement work is exported.
7	Contact person name (user)	The contact person name associated to replacement work is exported.
8	Contact person ID no. (user)	The contact person ID no. associated to replacement work is exported.
9	Contact telephone (user)	The contact telephone associated to replacement work is exported.
10	Technician name	The name of the technician who performed replacement work is exported.
11	Technician code	The code of the technician who performed replacement work is exported.
12	Country (technician)	The country of the technician who performed replacement work is exported.
13	Company name (technician)	The company name of the technician who performed replacement work is exported.
14	Company code (technician)	The company code of the technician who performed replacement work is exported.
15	Service office name (technician)	The service office name of the technician who performed replacement work is exported.

16	Service office code (technician)	The service office code of the technician who performed replacement work is exported.
17	Machine name	Export the device name.
18	Main Body Serial Number	The serial number of the main body is exported.
19	Unit type	The unit type is exported.
20	Unit Serial Number	The serial number of the unit is exported.
21	Replacement Count	The number of times of unit replacement is exported.
22	Unit removal date	The date of unit removal is exported.
23	Count read date	The date when the unit RFID tag is read is exported.
24	Count reset date	The date when the count is reset is exported.
25	The last undo reset date	The last date when undoing reset is exported.
26	Number of parts	The number of parts in the unit is exported.
Part Information (for each part)		
27	No	Assigned from 1 automatically.
28	Replace	The replaced parts are outputted as "Changed."
29	Parts name	The parts name is exported.
30	Parts No.	The parts number is exported.
31	Quantity	The quantity of parts is exported.
32	Count	The count value of parts is exported.
33	Life cycle	The life cycle value of parts is exported.
34	Supplement 1	When the unit type is "intermediate transfer unit" and the parts is "intermediate transfer belt" with count reset, "intermediate transfer belt characteristic value (front)" is exported.
35	Supplement 2	When the unit type is "intermediate transfer unit" and the parts is "intermediate transfer belt" with count reset, "intermediate transfer belt characteristic value (rear)" is exported.

Note

- Break character is "," (comma).
- Each item is enclosed in " " (double quotation marks).
- When no data exist, only " " (double quotation marks) is outputted.

File format

The header (item name) is created on first row of the file.

For the subsequent rows, each parts information is outputted per one line.

For example, when the unit has 15 parts in it, 15 rows are outputted per replacement work.

1st row	Header row (exports the item name)	N of replaced parts per replacement work
2nd row	Replacement work 1 - part (1)	
3rd row	Replacement work 2 - part (2)	
4th row	Replacement work 3 - part (3)	
5th row	Replacement work 4 - part (4)	
	<div> <div></div> <div></div> <div></div> </div>	

(7) Print Report

Details on the replacement work can be printed as replacement report.

Print layout

1.8.11 Error message list

An error message may appear while Management Tool is operating.
The description of error and its error code are displayed.

The error codes and countermeasures are shown below. Follow the countermeasures shown below.

Error code	Measure taken
400-402, 500, 501, 600, 700, 2005-2008, 2030-2044, 2100-2109, 2130-2140, 2151-2160, 2170-2187, 2194-2196, 2200-2209, 2230-2240, 2251-2260, 2270-2280, 2290-2297, 2303-2329, 2331-2343, 2346-2358, 2362, 2363, 2367, 2405, 2409, 2411, 2500-2509, 2516, 2517, 2520-2523, 2762-2766, 2781-2813, 3000-3006, 3008-3014, 3100, 3101	Retry.
2402, 2403, 2410, 2411, 5001-5010, 5200-5208	Check the RFID tag and retry. Note <ul style="list-style-type: none"> When the same error occurs even after retrying, remove the RFID tag reader/writer from a computer once and insert it again, then reboot the Management Tool. When the same error still occurs, contact an administrator.
2400, 2406-2408, 5100-5106	Check whether the RFID tag reader/writer is connected to a computer correctly.

102, 111-113, 800-802, 854, 855, 860-868, 880-884, 2090-2096, 2600-2611, 2622-2633, 2636-2644, 2710-2720, 3000-3006	Reinstall the Management Tool.
2100-2121, 2151-2160, 2170-2180, 2200-2221, 2251-2260, 2270-2280, 2303-2319, 2322-2329, 2331-2345, 2359, 2731, 2760, 2761	The file is not supported.
100	Non-compliant OS is used.
803-808, 914, 915, 950, 951, 2401, 2404, 2721-2723, 2730, 2732-2759, 2767-2775, 5102, 5201	Reboot the Management Tool.
2510-2515	Check the printing environment.

1.9 Acquisition of the controller log

1.9.1 OUTLINE

When there occurs an abnormal condition with respect to the image controller, acquisition of the controller log allows you to expect a location where an error has occurred.

USB memory is used for this acquisition. There are the following two procedures for log acquisition: "Controller defective log" and "Controller capture."

(1) Acquisition of the controller defective log

It is possible to collect log data in the USB memory just before a defective condition occurs.

Used when no defective condition recurs or it occurs less frequently.

Note

- The acquisition of print data is restricted only to 10 jobs just before the USB memory is inserted with [04 Spool Print Jobs in HDD before RIP] in [Controller] set to [Enable].

(2) Acquisition of the controller capture

Jobs can be collected after the USB memory is connected. This is used when a defective condition can be reproduced easily.

1.9.2 Preparation

(1) USB memory

- The shape must be slim so that it can be connected to the USB port (Type A) for the service of IC.
- USB memory that has been formatted in FAT or FAT 32 form.
- USB memory with a capacity larger than 2 GB, when used for the acquisition of defective log.
- When used for capture acquisition, the larger the capacity of the USB memory, the greater the number of data that can be obtained. (The number of data that can be obtained depends on the print size of the original and the capacity of the USB memory.)

(2) Key files for log acquisition

- Key file for acquisition of the defective log of the controller: showallog
- Key file for acquisition of the controller capture: getcapture

Note

- Obtain a key file from KMBT.
- Be sure to store only one of "showallog" or "getcapture" key file in the USB memory. If both of the key files are stored in the USB memory, the defective log/capture is not acquired properly.

(3) Setting of the controller

Make settings of [MACHINE] - [Controller] - [04 Spool Print Jobs in HDD before RIP setting] to [Enable] on the operation panel of the main body.

When the spool setting is changed, be sure to turn off and on the main power switch (SW1).

1.9.3 Procedure for acquisition

(1) Procedure of acquisition of the controller defective log

1. Store the key file for acquisition of the controller defective log (showallog) in the USB memory with empty space.

Note

- A key file cannot be created. So, be sure to obtain one from KMBT.

2. Connect the USB memory to the USB port (Type A) for the service of IC.
3. Wait until the "Machine condition" key or "Controller setting" key of the panel display stops blinking. Also, wait until the access lamp of the USB memory stops flashing. The data acquisition normally completes in about 15 seconds after the lamp stops flashing.

Note

- While the defective log is being collected, "Machine condition" key or "Controller setting" key normally keeps blinking, but it does not blink when there is a communication error between the controller and the main body.
- When there occurs a communication error, check the access lamp of the USB memory.

4. Check to see if the name of an obtained log file is shown in the upper left section of the screen when the following buttons are pressed down on the operation panel: [MACHINE]-[Controller]-[Log File Name]. (IPLog_yyyymmdd_hhmmss.log)

Note

- You cannot check when there occurs a communication error between the controller and the main body.

5. Disconnect the USB memory from the USB port (Type A) for the service of IC.
6. Check to see if there is an IPLog_yyyymmddhhmmss.log file obtained on the day in the USB memory, and then copy all the files stored to the PC.

Note

- Several files other than the above are stored depending on the condition.
- Be sure to turn the main power switch (SW1) OFF and ON after removing the USB memory from the service port.
If it is not turned OFF and ON, there will be no guarantee for its proper operation after the log acquisition is completed.

7. Compress the files copied to the PC to send to KMBT.

Other than the preceding procedure, there are following functions to collect information to make the analysis of the trouble easier.

- Log acquisition: Save the controller log to the HDD right after the trouble occurs.

(a) Log acquisition: Save the controller log to the HDD right after the trouble occurs.

With this function, you can acquire the log right after the trouble occurs. It makes the analysis of the trouble easier. Since this operation must be performed right after the trouble occurs, the user is required to help in some cases. The controller logs of the latest three jobs can be saved with this operation.

Preparation**(1) USB memory**

- The shape must be slim so that it can be connected to the USB port (Type A) for the service of IC.
- USB memory that has been formatted in FAT or FAT 32 form.
- USB memory with a capacity larger than 2GB, when used for the acquisition of defective log.

(2) Key files for log acquisition

- Key file for acquisition of the defective log of the controller: showallog

Note

- Obtain a key file from KMBT.

(3) Setting of the controller

Make settings of [MACHINE] - [Controller] - [04 Spool Print Jobs in HDD before RIP setting] to [Enable] on the operation panel of the main body.

When the spool setting is changed, be sure to turn off and on the main power switch (SW1).

Procedure to save and collect the log (For the steps 1 to 5 to save, ask the user to help in some cases.)

1. On the control panel of the main body, press [Controller] -> [08 Administrator Setting] -> [01 Software Switch Setting] and set the switch number "50" to "1" (ON).
2. Display the [MACHINE] screen.
3. Press [RECALL] -> [COPY] -> [RECALL] -> [COPY] -> [RECALL] -> [COPY].

Note

- Be sure to input all items within 5 seconds after pressing the first [RECALL].

4. When the input of step 2 succeeds, the data lamp of the main body starts flashing. The flashing means that the controller log is saving to the HDD on the controller side. Be sure to wait until the flashing of the data lamp stops.

Note

- When the data lamp does not start flashing within 10 seconds after performing the step 2, perform the step 2 again.

5. Be sure to confirm that the flashing of the data lamp stops. No need to turn OFF/ON the sub and main switches after this operation.

Note

- When this operation is performed for several times, only the latest information is saved. The former log data is overwritten and cannot be acquired.

6. The CE acquires the log. Use a USB memory to acquire the log.

Note

- Be sure that only the CE can perform the following operations. Do not disclose it to the user.
- When the log cannot be collected with the USB memory, follow the following procedure that uses FTP.
- Refer to (1) Procedure of acquisition of the controller defective log, since the procedure is the same.

Files to be obtained

DebugDataX.log (X:0 (the latest log), 1 (the second last log), 2 (the third last log))

7. On the control panel of the main body, press [Controller] -> [08 Administrator Setting] -> [01 Software Switch Setting] and set the switch number "50" to "0" (OFF).
8. Send the acquired data to KMBT.

Procedure to collect the log via FTP

1. Start the command prompt on the PC.
2. Enter "ftp://" (IP address of the controller)".
3. Enter the ID and password to log on.
ID: log, Password: sysadm
4. Enter "ls" or "dir" to check whether the following files exist.
DebugDataX.log (X:0 (the latest log), 1 (the second last log), 2 (the third last log))
5. Download the file to the PC by "mget" (several files) or "get" (single file).

(2) Procedure of acquisition of the controller capture

1. Obtain a key file for acquisition of controller capture from KMBT.
Create a key file in the other way. (A key file can be created from a Notepad.)
*Key file format: The <> section is edited.

HDDorUSB, <type>	<type>=USB: Saved in the USB memory inserted.
MIO,<switch>, <count>	<switch>=ON: Obtained <switch>=OFF: Not obtained <count>=1 to ∞: Number of files obtained (Overwritten with a number specified and deleted in the order of the older files when out of memory.)
NET,<switch>, <count>	The same as above
PDL,<switch>, <count>	The same as above
RIP,<switch>, <count>	The same as above
TIF,<switch>, <count>	The same as above

*MIO: Data received from the network

*NET: Data analyzed with PrintJobAnalyzer

*PDL: Data analyzed with PJLParser

*RIP: Data storing RIP Buffer

*TIF: TIFF image data output by interpreter

Example)

HDDorUSB, USB

MIO, ON, 30 (In the case of collecting 30)

2. Copy a key file for acquisition of an edited controller capture (getcapture) in the USB memory with empty space.
3. Connect the USB memory to the USB port (Type A) for the service of IC.
4. About after waiting for 20 seconds, check to see if the access lamp of the USB memory stops flashing.
5. Continue printing until there occurs any problems you want to obtain.

Note

- Print speed gets slower than usual according to the contents of acquisition (or the contents of the key file).

6. Check to see if the access lamp of the USB memory stops flashing, and then remove the USB memory from the USB port (Type A) for the service of IC.
7. Check to see if there are files obtained on the day in the USB memory, and then copy all the files stored to the PC.
Files to be obtained with switch=ON
 - MIO_YYYYMMDD_hhmmss.txt
 - NET_YYYYMMDD_hhmmss.txt
 - PDL_YYYYMMDD_hhmmss.txt
 - RIP_YYYYMMDD_hhmmss.txt
 - TIF_YYYYMMDD_hhmmss.tif
8. Compress the files copied to the PC to send to KMBT.

F PERIODICAL MAINTENANCE

1. MAINTENANCE ITEM

1.1 Replacing procedure of the periodical replacement parts

Note

- For the replacement procedure of the periodically replaced parts, refer to [F.5 PERIODICAL MAINTENANCE PROCEDURE bizhub PRESS 1250/1250P/1052/PRO 951](#).

1.2 bizhub PRESS 1250/1250P/1052

1.2.1 1250/1250P/1052

(1) Periodic maintenance 1 (Every 1,000,000 prints)

No.	Unit classification	Description	Quantity	Implementation classification				Materials Tools used
				Cleaning	Check	Lubrication	Replace	
1	Preparation	Image check			•			
		Charger/cleaner/developing unit/ LPH/drum removing						
		Drum stand inside cleaning (including the front side of the drum fixing coupling)		•				Vacuum cleaner
2	Scanner section	Exterior removing						
		Cleaning of the glass/the mirror		•				Isopropyl alcohol/cleaning pad
		Exterior installing						
3	Write section	Cleaning of the LPH lens		•				Cleaning pad
4	Charging corona	Charger control plate/discharge wire/both ends cover removing						
		Cleaning section removing						
		Charging cleaning unit A4EUR708##	2				•	
		Cleaning of the back plate		•				Cleaning pad/blower brush
		Charger control plate A4EUR709##	1				•	
		Charging wire 56UA2509##	2				•	
		Charger rubber vibration isolator 55VA2527##	2				•	
		C-clip 45AA2040##	2				•	
5	Cleaning section	Discharge wire A0G64708##	1				•	
		PCC cleaning		•				
		Cleaning blade A0G65350##	2				•	Cleaning pad/blower brush
		Cleaning of the receiving mylar		•				
		Cleaning of the inside of the cleaning unit		•				Vacuum cleaner
		Waste toner box A4EUR75V##					•	
		Drum scraper Assy A4EUR711##	1				•	
6	Photo conductor section	Scatter preventive filter Assy A4EUR712##	1				•	
		Drum • Photo conductor setting mode is conducted (in service mode)	1				•	Replace it once for every 1,000,000 prints or the following running time 1250/1250P: 175h 1052: 220h (whichever is earlier)
		Cleaning of the photo conductor section		•				Isopropyl alcohol/cleaning pad /Vacuum cleaner
		Drum claw A0G63456##	3				•	
		Drum claw unit cleaning		•				Vacuum cleaner /cleaning pad
		Drum fixing spring 55FU2014##	1				•	

		Drum positioning collar 25SA2015##	1				•	
7	Developing section	Cleaning of the developing section		•				Cleaning pad/vacuum cleaner
		Developer • TonerDensitySensorInit.Auto (in service mode)					•	Replace it once for every 1,000,000 prints or the following running time 1250/1250P: 175h 1052: 220h (whichever is earlier)
8	Toner supply section	Cleaning of the toner cartridge insertion opening		•				Vacuum cleaner
9	Transfer/Separation section	Removing/reinstalling of the interior/the exterior						Isopropyl alcohol/cleaning pad/blower brush
		Cleaning of the belt cleaning unit		•				
10	Fusing section	Cleaning of the Fusing claws /Up and /Lw/the entrance guide plate		•				Acetone/cleaning pad
		Fixing cleaning web A0G67314##	1				•	
11	Paper feed section	Cleaning of each sensor		•				Cleaning pad/blower brush
		Cleaning of the paper dust removing brush for vertical conveyance section		•				Vacuum cleaner/blower brush
		Cleaning of the vertical conveyance sensor		•				Cleaning pad/blower brush
12	DUPLEX SECTION	Cleaning of the paper dust removing brush		•				Vacuum cleaner/blower brush
		Cleaning of the registration sensor section		•				Cleaning pad/blower brush
		Cleaning of other sensors		•				
		Cleaning of the pre-transfer roller		•				Isopropyl alcohol/cleaning pad
		Cleaning of the loop roller		•				
		ADU Transport roller cleaning (4 positions)		•				
		Cleaning of the ADU reverse/exit roller		•				
		Transport roller cleaning (2 positions)		•				
		Cleaning of the ADU acceleration roller		•				
		Cleaning of the ADU exit roller		•				
		Cleaning of the ADU reverse roller		•				
		Cleaning of entire conveyance section/installing of the cover						Vacuum cleaner
13	De-curler section	Cleaning of the de-curler entrance roller		•				Isopropyl alcohol/cleaning pad
		Transport roller cleaning (2 positions)		•				
14	Each unit installing	Drum installing						
		Sensor/stay installing						
		Developing unit/suction filter						
		Installing of the cleaning unit						
		Charger installing						
		Installing the drum stand (drum fixing screws)						
15	Final check	Check warm-up time			•			
		Check of the image and the paper through (including each adjustment)			•			
		Maintenance counter reset (in service mode)			•			

(2) Periodic maintenance 2 (Every 2,000,000 prints)

No.	Unit classification	Description	Quantity	Implementation classification				Materials Tools used
				Cleaning	Check	Lubrication	Replace	
1	Cleaning section	Cleaning of the cleaning unit		•				Vacuum cleaner /cleaning pad

				Cleani ng	Check	Lubric ation	Repla ce	
1	Punch conveyance section	Aligner Idler Roller Assembly		•				Alcohol
2		Belt Aligner (Green)	1	•				
3	Punch section	Punch drive cams	1			•		Magnalube-G Teflon Grease Actual lubrication count: 3,000,000 punches

(5) Spotted replacement (Every 500,000 punches)

No.	Unit classification	Description	Quantity	Implementation classification				Materials Tools used
				Cleani ng	Check	Lubric ation	Repla ce	
1	Punch section	Die Set	1		•		•	Replacement is recommended if hanging chips are usually generated.

(6) Spotted replacement (Every 4,000,000 cycle)

No.	Unit classification	Description	Quantity	Implementation classification				Materials Tools used
				Cleaning	Check	Lubrication	Replace	
1	Punch section	Back Gauge Mechanism A0N9PP59##	1				•	Actual replacement count: 4,000,000 punches

1.3.12 GP-502**(1) Periodic maintenance 1 (Every 1,000,000 prints)**

No.	Unit classification	Description	Quantity	Implementation classification				Materials Tools used
				Cleaning	Check	Lubrication	Replace	
1	Bypass section	Bypass Rollers		•	•			

(2) Spotted replacement (Every 500,000 punches)

No.	Unit classification	Description	Quantity	Implementation classification				Materials Tools used
				Cleaning	Check	Lubrication	Replace	
1	Punch section	Pullback Pad A4F6PP00##	2				•	

(3) Spotted replacement (Every 1,000,000 punches)

No.	Unit classification	Description	Quantity	Implementation classification				Materials Tools used
				Cleaning	Check	Lubrication	Replace	
1	Punch section	Suction Cup: Element Feeder A4F6PP03##	1				•	
2	Preparation	Removing the rear cover Removing the punch unit			•			
3	Punch Unit	Oiled Felt, Die-set A4F6PP01##	1				•	
		Punch Module	1			•		Magnalube-G TeflonGrease/ Nippeco MP No.1
		Vertical Transport Belts: Before Punch	4	•	•			Isopropyl alcohol/cleaning pad
		Vertical Transport Belts: After Punch	4	•	•			
4	Post-process	Installing the punch unit Installing the rear cover			•			

(4) Spotted replacement (Every 4,000,000 punches)

No.	Unit classification	Description	Quantity	Implementation classification				Materials Tools used
				Cleaning	Check	Lubrication	Replace	
1	Punch Unit	Punch Pin/Plate Assy, Die-set A4F6PP02##	1				•	

2. PERIODICALLY REPLACED PARTS LIST

2.1 Periodical replacement parts

Note

- For the part number of periodically replaced parts, refer to "Parts guide manual."
- For the replacement procedure of the periodically replaced parts, refer to [F.5 Periodical maintenance procedure bizhub PRESS 1250/1250P/1052/PRO 951](#) to [F.20 Periodical maintenance procedure PB-503](#).
- The parts count No. given in the following table represents the number of the special parts count in the service mode.

2.2 bizhub PRESS 1250/1250P/1052

2.2.1 Periodically replaced parts list

(1) Main body

No.	Classification	Parts name	Parts No.	Quantity	Actual replacement Cycle	Parts count No.

3. ORU-M PARTS (1250/1250P/1052 only)

3.1 Life value of the ORU-M parts

(1) ORU-M corresponding parts

ORU-M stands for "Operator Replaceable Unit Management." This function displays the steps/adjustment setting methods and manages data when the educated user replaces the parts.

This function is enabled by installing the prescribed option and setting DIPSW15-0 to 1. For ORU-M corresponding parts, some parts provided as an assy of parts larger than those parts replaced normally by the CE so that the user can easily conduct the part replacement operation.

Note

- The ORU-M function is not available for the products equipped with EF-102.
- Be careful not to replace the fusing unit with EF-102 when ORU-M is enabled. EF-102 is falsely recognized as a usual fusing unit and errors such as jam by separation error occur.

3.2 ORU-M parts list

(1) ORU-M parts list

The Enable/Disable of the ORU-M parts can be set on [I.5.18.1 ORU-M Target Setting](#) in Service Mode individually.

ORU-M target unit has 2 types; "replacement type" and "reuse type".

· Replacement type: The user replaces the unit to complete.

· Reuse type: The CE maintains the part of unit that the user replaced. The unit itself is reused.

Target of ORU-M (Replaced by users)	Type	Target parts for maintenance	Replacement cycle	parts count No.	Detection of connector disconnecti on
Charging corona	Reuse type	Charging corona unit	8,000,000 prints	9	Provided
		Charging wire	1,000,000 prints	6	
		Charger control plate	1,000,000 prints	7	
		Charging cleaning unit	1,000,000 prints	8	
		C-clip	1,000,000 prints	-	
		Charger vibration proof rubber	1,000,000 prints	-	
Developing suction	Reuse type	Developing suction assy	-	13	None
		Suction filter	2,000,000 prints	10	
		Replacing the developing suction seal /2 and /5, the suction pad /H, and the stopper pads /1 and /2	8,000,000 prints	11	
Drum cleaner	Reuse type	Cleaning section	-	45	Provided
		Cleaning blade	1,000,000 prints	32	
		Cleaning blade running distance	1,000,000 prints	33	
		Drum scraper Assy	1,000,000 prints	34	
		Scatter preventive filter Assy	1,000,000 prints	35	
		Toner guide brush assy	2,000,000 prints	36	
		Toner guide brush assy running distance	2,000,000 prints	37	
		Seal plate /Rr	2,000,000 prints	38	
		Seal plate /Fr	2,000,000 prints	39	
		Guide plate assy	2,000,000 prints	40	
		Scattering prevention felt	2,000,000 prints	-	
		Toner seal board	4,000,000 prints	41	
		Guide shaft	8,000,000 prints	42	
		Cleaning gear /2 assembly	8,000,000 prints	43	
		Cleaning gear/3	32,000,000 prints	44	
PCC	Reuse type	PCC unit	8,000,000 prints	31	None
		Discharging wire	1,000,000 prints	30	
LPH	Only cleaning	LPH unit	-	-	Provided
Transfer belt unit	Reuse type	Transfer belt unit	-	29	None
		Bearing /H	4,000,000 prints	23	
		Transfer contact /Rr	4,000,000 prints	24	
		Transfer contact /Fr	4,000,000 prints	25	
		Transfer belt	4,000,000 prints	20	
		Transfer roller	4,000,000 prints	21	
Transfer belt cleaning unit	Reuse type	Belt cleaning unit	16,000,000 prints	28	None
		Regulation plate assy	2,000,000 prints	19	
		Electric power supply part	4,000,000 prints	26	

		Cleaning brush	4,000,000 prints	22	
		Cleaning shaft	8,000,000 prints	27	
Fusing cleaning web *1	Replacement type	Fusing cleaning web	1,000,000 prints	46	None
Fusing unit *1	Reuse type	Fusing unit	-	67	None
		Fusing cleaning web	1,000,000 prints	46	
		Fusing roller /Up	2,000,000 prints	47	
		Fusing roller /Lw Assy	2,000,000 prints	48	
		Fusing claw /Up	2,000,000 prints	49	
		Fusing claw /Lw	2,000,000 prints	50	
		Heat insulating sleeve	2,000,000 prints	51	
		Fusing bearing /Up	2,000,000 prints	52	
		Fusing cleaning sheet assy	2,000,000 prints	53	
		Heat roller bearing	4,000,000 prints	60	
		Fusing temperature sensor /2 (TH2)	4,000,000 prints	61	
		Fusing heater lamp /1 (L1), (L2)	4,000,000 prints	55	
		Fusing heating roller	4,000,000 prints	56	
		Heat insulating sleeve /Lw	4,000,000 prints	57	
		Fusing temperature sensor /4 (TH4)	4,000,000 prints	58	
		Fusing heater lamp /3 (L3)	4,000,000 prints	59	
		Fusing gear	8,000,000 prints	62	
		Fusing cleaning roller	14,000,000 prints	54	
		Bearing /G	14,000,000 prints	-	
		Web prevention part	24,000,000 prints	64	
		Bearing /G	24,000,000 prints	-	
		Fusing claws installation assy	24,000,000 prints	-	
		Fusing oscillation cam assy	24,000,000 prints	-	
		Pressure worm assy	30,000,000 prints	65	
		Pressure wheel assy	30,000,000 prints	66	
Feed roller unit (Tray1)	Replacement type	Pick-up roller	500,000 prints	86	None
		Paper feed roller	500,000 prints	87	
		Separation roller	500,000 prints	87	
Feed roller unit (Tray2)	Replacement type	Pick-up roller	500,000 prints	90	None
		Feed roller	500,000 prints	91	
		Separation roller	500,000 prints	91	

*1 The fusing cleaning web and the fusing unit cannot be set to "ORU-M Target Setting: [Enable]" at the same time.

3.3 ORU-M parts replacement timing

(1) ORU-M Life Threshold Setting

Set whether to display the ORU-M target unit in [I.5.18.2 ORU-M Life Threshold Setting](#) of the Service Mode by the life value. Set the threshold with percent.

For example, when the threshold is set to 50%, only the unit whose life cycle is 50% or more is displayed on the "ORU-M Replacement Unit screen".

This life threshold setting is applied to all screens that display the name of the ORU-M target unit.

(2) ORU-M warning icon display

When the life of the ORU-M target unit strays and the following conditions are met, the ORU-M warning icon appears on the Machine Screen.

- ORU-M function is enabled
- [Enable] in [I.5.18.1 ORU-M Target Setting](#)

3.4 Management of ORU-M parts counter

(1) Counter display

By pressing [ORU-M(Unit Replace)] on the Utility screen, the ORU-M target part counter appears.

Note

- By setting DIPSW15-0 to 1, [ORU-M(Unit Replace)] appears on the Utility screen.
- The content which appears on [ORU-M(Unit Replace)] reflects the setting of [I.5.18 ORU-M setting \(1250/1250P/1052 only\)](#).

(2) Counter clear

When the user replaces the ORU-M target parts in the ORU-M replacement work mode.

4. LIFE VALUE

4.1 Life value of materials/parts

Item	Print Quantity	Running time	Definition of driving time
Drum	1250/1250P/1052: 1,000,000 951: 750,000	1250/1250P: 175 hours 1052: 220 hours 951: 190 hours	The time during which the drum is being driven. Idling time* is included in this time period.
Developer	1250/1250P/1052: 1,000,000 951: 750,000	1250/1250P: 175 hours 1052: 220 hours 951: 190 hours	The time during which the developing roller is being driven. Idling time* is included in this time period.

4.2 Life value determining condition

The replacement cycle (number of print) is a value that is converted from the actual life when the print is performed under the determining condition (shown in the following list). The idling time (driving time of each part while in creating the non-image) differs depending on the output mode. Therefore, the actual life sometimes varies widely even for the same number of prints.

Item	Description
How to print	1250/1250P: 13-sheet Intermittent output 1052: 11-sheet Intermittent output 951: 10-sheet Intermittent output
Paper size	A4

Note

- Only print count or running time generates developer/drum replacement icon. The trigger can be switched between print count and running time by setting of the DIPSW 15-7 in the service mode.

5. PERIODICAL MAINTENANCE PROCEDURE bizhub PRESS 1250/1250P/1052/PRO 951

5.1 Precautions on maintenance

⚠ Note

- Be sure to unplug the power plug from the power outlet.

Note

- The gear [2] with the pin [1] is attached on every drive sections of the machine. Do not wipe off the grease that is applied to the groove receiving the pin [3] when removing and attaching the gear.

5.2 External section

5.2.1 Replacing the ozone filter /12/Charge exhaust filter

(1) Periodically replaced parts/cycle

- Ozone filter /12
 - : Every 6,000,000 prints *1
 - : 4,500,000 prints *2
- Charge exhaust filter
 - : Every 6,000,000 prints *1
 - : 4,500,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Loosen 3 screws [1] and remove the exhaust cover [2].

2. Remove 2 ozone filters /12 [2] from the exhaust cover [1].

3. Remove the charge exhaust filter assy [1].
4. Reinstall the preceding parts following the removal steps in reverse.
5. After replacing the ozone filter /12 and the charge exhaust filter, conduct the followings.
For the ozone filter /12: Counter reset of the parts counter No.2
For the ozone filter : Counter reset of the parts counter No.3

5.2.2 Replacing the charging filter/filter plate

(1) Periodically replaced parts/cycle

- Charging filter
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2
- Filter plate
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
2. Remove the charging filter assy [1] by moving it to the arrow-marked directions [2] and then [3].

- Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the charging filter assy, be sure to attach the charging filter [1] to the filter plate [2] beforehand.

- After replacing the charging filter assy, conduct the following item.
Counter reset of the parts counter No.1

5.3 Photo conductor section**5.3.1 Removing/reinstalling the photo conductor section****Note**

- When the drum section has been removed, be sure to store it in a dark place with the drum cover provided.
- When removing/reinstalling the photo conductor section, be careful not to rotate the drum in any direction other than the specified direction. Rotating it in the opposite direction to the rotational direction while printing damages the cleaning blade.
- When removing the photo conductor section, be sure to clean the coupling.
- When removing/reinstalling the photo conductor section, be sure not to touch the drum claw.
- When replacing the photo conductor, be sure to replace the cleaning blade at the same time.

(1) Procedure

- Open the front doors /Rt and /Lt.
- Tilt the lever that pulls out the duplex section. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
- Loosen 2 screws [1] and remove the photo conductor section cover [2].

- Release the lock lever /1 [1] and pull out the intermediate toner hopper [2].

- Release the lock lever /2 [1] and open the intermediate toner hopper [2].

6. Remove 2 connectors [1].

7. Turn the drum lock knob [2] clockwise [3] to rotate the drum 1 full turn, and turn the knob counterclockwise [4] to remove it.

Note

- When removing the drum lock knob, be sure to rotate the drum 1 full turn clockwise to put the toner on the drum into the cleaner for dirt prevention.

8. Pull out the coupling [1].

9. Release the photo conductor section lock lever /1 [2] and /2 [3] and pull out the photo conductor section [4] by holding the lock levers /1 and /2.

10. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the coupling, be sure to clean the periphery of the coupling with the isopropyl alcohol.
- When reinstalling the coupling, be sure to set the projection portion [1] of the coupling into the hole [2] of the drum shaft.

5.3.2 Replacing the charger unit

Note

- When removing the charger unit, be careful not to touch the mesh portion of the charger control plate with bare hands.
- When cleaning the charger control plate, blow off dirt with the blower brush.

(1) Periodically replaced parts/cycle

- Charger unit
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove 2 connectors [1].
3. Hold the portions marked with [2] and [3] and remove the charger unit [4].
4. Reinstall the preceding parts following the removal steps in reverse.
5. After replacing the charger unit, conduct the following item.
Counter reset of the parts counter No.9

5.3.3 Replacing the charger control plate**(1) Periodically replaced parts/cycle**

- Charger control plate
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the charger unit. (Refer to [F.5.3.2 Replacing the charger unit](#))
2. Slide the lever [1] in the arrow-marked direction [2] to release the lock [3] and remove the charger control plate [4].

Note

- Be sure to avoid loosening or removing the screw [5] that fastens the lever.

3. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the charger control plate, make sure that the PET sheet [6] comes to the outside (drum side).
- When reinstalling the charger control plate, make sure that the charger control plate is not bent and the edge is not distended.

4. After replacing the charger control plate, conduct the following steps.
Counter reset of the parts counter No.7

5.3.4 Replacing the charger wire/charger vibration proof rubber**(1) Periodically replaced parts/cycle**

- Charging wire
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Charger rubber vibration isolator
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the charger unit. (Refer to [F.5.3.2 Replacing the charger unit](#))
2. Remove the charger control plate. (Refer to [F.5.3.3 Replacing the charger control plate](#))
3. Remove the craws, 2 each, and remove the spark arrester plates / Fr [1], /Rr [2].
4. Remove the springs [3], 1 each, and then remove the charger wires [4] and the charger vibration proof rubber [5], 1 each.

Note

- When removing the charger wire, be careful not to drop off the charger vibration proof rubbers.
- When reinstalling the charger wire, be sure to insert each of the wires into the cut [6] of the charger vibration proof rubber.
- Be sure to reinstall the charger wires so that the hook [7] of each spring turns to the inside.

5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the charger wire/charge vibration proof rubber, conduct the following steps.
Counter reset of the parts counter No.6

5.3.5 Replacing the charger cleaning unit/C-clip**(1) Periodically replaced parts/cycle**

- Charging cleaning unit
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- C-clip
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the charger unit. (Refer to [F.5.3.2 Replacing the charger unit](#))
2. Remove the charger control plate. (Refer to [F.5.3.3 Replacing the charger control plate](#))
3. Remove the charger wire. (Refer to [F.5.3.4 Replacing the charger wire/charger vibration proof rubber](#))
4. Remove 3 screws [1] and remove the charger duct [2].

Note

- When reinstalling the charger duct, be sure to set 2 claws [1] of the charger duct into 2 holes [2] of the charger unit.

5. Remove the C-clip [3], 1 each, from the shaft [2] of the charger cleaning unit [1].
6. Reverse the charger unit [4] and remove the 2 charger cleaning units.
7. Remove the collar [5] from the shaft of each of the charger cleaning units.
8. When the charger back plate [6] is stained, clean it with Isopropyl alcohol and a cleaning pad.

Note

- Be careful that the collar inserted into the shaft of the charger cleaning unit does not drop off.
- Be sure to reinstall the charger cleaning unit so that the marking "F" [7] turns in the same direction as shown in the drawing.

9. Reinstall the preceding parts following the removal steps in reverse.
10. After replacing the charger cleaning unit/C-clip, conduct the following steps.
Counter reset of the parts counter No.8

5.3.6 Cleaning the LPH lens**(1) Periodically cleaned parts/cycle**

- LPH lens
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the wiring harness [1] from the wiring harness guide [2].

3. Hold the section A [1] and B [2] with both hands and release the section /Fr [3], and then release the section /Rr [4] to remove the LPH unit [5].

Note

- When removing/reinstalling the LPH, be sure to remove the label 1 [6] side at first and then the label 2 [7] side.

**Note**

- When reinstalling the LPH unit [1], be sure to set each guide pin [2] and [3] to each guide hole [4] and [5] of the unit.
- When reinstalling the LPH unit [1], install the section /Fr [6] before installing the section /Rr [7].

4. Clean the lens section [1] of the LPH unit with a cotton swab soaked in alcohol, and wipe with a dry cotton swab to finish.

Note

- Insert a cotton swab to the inside of the depression of the lens cover [2] to contact with the lens section [3].
- Be sure to use a cotton swab for one way [4] only once for both of cleaning and finishing. Never use a cotton swab back and forth. Be sure to use a new cotton swab to clean it again in the same direction or clean it in the opposite direction.

5. Reinstall the above parts following the removal steps in reverse.

5.3.7 Replacing the drum temperature sensor**(1) Periodically replaced parts/cycle**

- Temperature sensor
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the photo conductor section. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the LPH unit. (Refer to [F.5.3.6 Cleaning the LPH lens](#))
3. Disconnect the connector [1].
4. Open the sensor support stay [2].
5. Remove the screw [3] and then remove the drum temperature sensor [4].
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the drum temperature sensor, conduct the following steps.

Counter reset of the parts counter No.5

5.3.8 Replacing the drum/cleaning of the photo conductor section**Note**

- Be careful not to touch or damage the drum and the cleaning blade with bare hands.
- When storing the drum, be sure to store it in dark place with the drum cover attached.
- When reinstalling the drum, the cleaning blade and the toner guide brush, be sure to apply setting powder all around the drum and the cleaning blade regardless of these parts being new or used ones.
- When the drum is applied with setting powder, be sure conduct the following operations before installing the photo conductor section to the main body:
 1. With the charger, the LPH unit and the developing section removed, rotate the drum 1 full turn. (to prevent splashing of setting powder to the charger and prevent the image from getting blurred)
 2. When installing a new drum, be sure to reset the photo conductor counter in the service mode. Otherwise, image gray background and toner scatter occur. (Refer to [I.5.5.1.\(2\) Counter reset](#))

(1) Periodically replaced parts/cycle

- Drum
 - : Every 1,000,000 prints or 175 hours of driving time, whichever is earlier.*1

- : Every 1,000,000 prints or 220 hours of driving time, whichever is earlier.*2
 : Every 750,000 prints or 190 hours of driving time, whichever is earlier.*3

*1 1250/1250P

*2 1052

*3 951

(2) Procedure

a0g6t3c024ca

[6] [7]

1. Pull out the photo conductor section. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the charger unit. (Refer to [F.5.3.2 Replacing the charger unit](#))
3. Remove the LPH unit. (Refer to [F.5.3.6 Cleaning the LPH lens](#))
4. Remove the developing unit. (Refer to [F.5.4.4 Replacing the developing unit](#))
5. Remove the cleaning section. (Refer to [F.5.6.1 Removing/reinstalling the cleaning section](#))
6. Open the sensor support stay. (Refer to [F.5.3.7 Replacing the drum temperature sensor](#))
7. Remove the drum [1].

8. Clean toner adhered around the drum installation section [1] and the developing suction ducts [2] and [3] with a vacuum cleaner.
9. Clean the JAM sensor [5] on the JAM sensor board (JAMB) [4] with the cleaning pad.
10. Clean the IDC sensor [7] on the toner control board (TCB) [6] with a cotton swab soaked in alcohol.

Note

- Dampen the cotton swab with alcohol a little. When too much alcohol is dampened, wring extra alcohol out of cotton swab and clean the sensor.
- Do not use any materials other than a cotton swab soaked in alcohol to clean the IDC sensor. When cleaning the IDC sensor in other ways, the IDC sensor performance is not warranty. Be sure to replace TCB.

11. Reinstall the preceding parts following the removal steps in reverse.
12. After replacing the drum/cleaning the photo conductor section, conduct the following steps.
 - Charge potential automatic adjustment
(Refer to [1.5.4.10 Charge Potential Auto. Adj. \(Drum Peculiarity Adjustment\)](#))
 - Photo conductor setting mode
(Refer to [1.5.4.12 Sensitive Drum Set Mode \(Drum Peculiarity Adjustment\)](#))
 - Auto maximum density adjustment
(Refer to [1.5.4.13 Auto Maximum Density Adj. \(Drum Peculiarity Adjustment\)](#))
 - Auto dot diameter adjustment
(Refer to [1.5.4.14 Auto Dot Diameter Adj. \(Drum Peculiarity Adjustment\)](#))
 - Cartridge set mode
(Refer to [1.5.4.15 Cartridge Set Mode \(Drum Peculiarity Adjustment\)](#))

5.3.9 Replacing the drum claw**Note**

- When reinstalling the drum claw, take note of the direction and position of the claw.

(1) Periodically replaced parts/cycle

- Drum claw
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the photo conductor section. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the drum. (Refer to [F.5.3.8 Replacing the drum/cleaning of the photo conductor section](#))
3. Remove the spring [1].
4. Remove 2 screws [2] and then remove the drum claw unit [3].
5. Disengage the wiring saddle [4] and disconnect the connector [5].

**Note**

- When reinstalling the drum claw unit [1], be sure to set the hooks [2] to the shafts [4] of the photo conductor section [3].

a0g6t3c027cb

6. Remove 4 C-clips [1], and pull out the 2 shaft [2] in the arrow-marked direction to remove the 3 drum claws [3].
7. Remove the springs [4], 1 each, from each of the drum claws.

Note

- When reinstalling the drum claws, be sure to clean the shaft with the isopropyl alcohol and a cleaning pad. Reinstalling the separation claws with toner adhered causes the operation to slow down.
- After reinstalling the drum claws, check to see if they move smoothly.

8. Reinstall the preceding parts following the removal steps in reverse.
9. After replacing the drum claw, conduct the following item.
Counter reset of the parts counter No.4

5.3.10 Replacing the drum fixing spring and the drum positioning collar**Note**

- Replace the drum fixing spring and the drum positioning collar at the same time.

(1) Periodically replaced parts/cycle

- Drum fixing spring
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Drum positioning collar
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the photo conductor section. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the drum positioning collar [2] from the drum shaft [1] and then remove the drum fixing spring [3].

Note

- When replacing the drum positioning collar and the drum fixing spring, be sure not to put weight on the photo conductor section [4], the guide rails [5] and the drum shaft.
- When reinstalling the drum positioning collar, be sure to set it to the slit [6] of the drum shaft.

3. Reinstall the above parts following the removal steps in reverse.

5.4 Developing section**5.4.1 Replacing the suction filter****(1) Periodically replaced parts/cycle**

- Suction filter
 - : Every 2,000,000 prints *1

: Every 1,500,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

[1]

[1]

[2]

[2]

[1]

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Release the lock [1] and remove the developing suction assy [2].

3. Release 3 claws [1] and remove the cover [2].

Note

- When reinstalling the cover, be sure to check that the 3 claws [1] are engaged with the projection portion [2] of the developing suction assy.

4. Remove the suction filter [1].

Note

- When reinstalling the suction filter, insert the opening [2] to the ribs [3] of the case.

5. Clean the inside of the developing suction Assy.
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the suction filter, conduct the following step.
Counter reset of the parts counter No.1

5.4.2 Replacing the developing suction seal /2 and /5, the suction pad /H, and the stopper pad /1 and /2

(1) Periodically replaced parts/cycle

- Developing suction seal /2
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Developing suction seal /5
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Suction pad /H
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Stopper pad /1
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Stopper pad /2
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the suction filter /Lw. (Refer to [F.5.4.1 Replacing the suction filter](#))
3. Peel off the developing suction seal /5 [1].
4. Peel off 2 developing suction seals /2 [2].
5. Peel off the suction pad /H [3].

**Note**

- When reinstalling the suction pad /H [1], with reference to the A side [2], place the long side in contact with the A side. At this time, be sure to put the longer side of the suction pad /H in contact with the inside surfaces [3] of the hole.

**Note**

- When reinstalling the developing suction seal /2 [1], with reference to the B side [2], place the short side in contact with the B side and the long side to be the same level as the inside surfaces [3] of the hole. At this time, make sure that there is no gap at the contact portion [5] of the suction pad /H [4] and the developing suction seal /2.

**Note**

- When reinstalling the developing suction seal /2 [1], with reference to the C side [2], place the short side in contact with the C side and the long side to be the same level as the inside surfaces [3] of the hole. At this time, make sure that there is no gap at the contact portion [5] of the suction pad /H [4] and the developing suction seal /2.

**Note**

- When reinstalling the developing suction seal /5 [1], with reference to the short side of the outer side of the developing suction seal /2 [2], place the short side to be the same level as the long side of the outer side of the developing suction seal /2. At this time, make sure there is no gap at the contact portion [3] of the developing suction seals /5 and /2.

6. Peel off 2 stopper pads /1 [1].

7. Peel off 2 stopper pads /2 [2].

Note

- When reinstalling the stopper pad /1 [1], with reference to the D side [3], place the long side in contact with the D side.
- When reinstalling the stopper pad /2 [2], with reference to the E side [4], place the long side in contact with the E side. At this time, make sure there is no gap at the contact portion [5] of the stopper pads /2 and /1.

8. Reinstall the preceding parts following the removal steps in reverse.

9. After replacing the developing suction seal /2 and /5, the suction pad /H, and the stopper pad /1 and /2, conduct the following steps. Counter reset of the parts counter No.11

5.4.3 Cleaning of the developing unit

(1) Periodically cleaned parts/cycle

- Developing unit
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

a0g6t3c036ca

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the developing suction assembly. (Refer to [F.5.4.1 Replacing the suction filter](#))
3. Remove the developing unit. (Refer to [F.5.4.4 Replacing the developing unit](#))
4. Remove the developing unit cover /1. (Refer to [F.5.4.5 Replacing the developer](#))
5. Clean the developer regulation blade [1], the developer regulation shaft [2] and both ends of the developing roller [3] with the cleaning pad and the vacuum cleaner.

Note

- Be careful not vacuum too much developer necessarily. Be sure to clean just the stained sections.

6. Clean up the rear side of the developing unit cover /1 [1] with a vacuum cleaner.

7. Reinstall the above parts following the removal steps in reverse.

5.4.4 Replacing the developing unit

(1) Periodically replaced parts/cycle

- Developing unit
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the developing suction assembly. (Refer to [F.5.4.1 Replacing the suction filter](#))
3. Disconnect the connector [1].
4. Release the developing pressure lever [3] while holding down the right side [2] of the developing unit.

Note

- When releasing the developing pressure lever, be careful not to touch the front panel and the rear panel of the photo conductor section.

5. Hold the sections [1] and [2] with both hands and remove the developing unit [3].

**Note**

- When reinstalling the developer unit, make sure that the developing unit stopper roller [1] is in contact with the developing unit stopper block [2]. (DS secured)
- When the developing unit stopper roller is too easily rotated, remove it once and then reinstall it.
- When installing the developing unit, be sure to insert it slowly in parallel.
- When the developing unit stopper roller has dirt or scratch, rotate and install it so that the part does not contact with the roller.

[2] [1]

6. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the developer unit, be careful that the front panel of the photo conductor section does not come into contact with the developing roller [1].
- Never rotate the developing gear to the arrow-marked direction [2].

7. After replacing the developing unit, conduct the following steps.

Counter reset of the parts counter No.12

Charging Potential Auto Adj.

(Refer to [1.5.4.10 Charge Potential Auto. Adj. \(Drum Peculiarity Adjustment\)](#))

Auto Maximum Density adjustment

(Refer to [1.5.4.13 Auto Maximum Density Adj. \(Drum Peculiarity Adjustment\)](#))

Auto Dot Diameter adjustment

(Refer to [1.5.4.14 Auto Dot Diameter Adj. \(Drum Peculiarity Adjustment\)](#))

Cartridge Set Mode

(Refer to [1.5.4.15 Cartridge Set Mode \(Drum Peculiarity Adjustment\)](#))**5.4.5 Replacing the developer****Note**

- When replacing the developer, be careful that dirt does not get into it.
- When rotating the developing roller [1], be sure to rotate the developing gear [2] to the arrow-marked direction [3] with the flat blade driver.
- When rotating the agitator screw [4], the conveyance screw [5] and the agitator plate [6], be sure to rotate the agitator gear [7] in the arrow-marked direction [8] with the flat blade driver.
- When charging the new developer, be sure to conduct "TonerDensitySensorInit.Auto" in Service Mode. If not reset, image fogging, toner splash and so on occur. (Refer to [1.5.5.1.\(2\) Counter reset](#))

**(1) Periodically replaced parts/cycle**

- Developer
 - : Every 1,000,000 prints or 175 hours of driving time, whichever is earlier.*1
 - : Every 1,000,000 prints or 220 hours of driving time, whichever is earlier.*2
 - : Every 750,000 prints or 190 hours of driving time, whichever is earlier.*3

*1 1250/1250P

*2 1052

*3 951

(2) Procedure

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the developing suction assembly. (Refer to [F.5.4.1 Replacing the suction filter](#))
3. Remove the developing unit. (Refer to [F.5.4.4 Replacing the developing unit](#))
4. Release 2 hooks [1] and remove the developing unit cover /1 [2].
5. Release 2 hooks [3] and remove the developing unit cover /2 [4].

6. With the developing unit [1] tilted to about 90°C [2], rotate the developing gear [3] and the agitator gear [4] in the arrow-marked direction [5] with a flat blade screwdriver to discharge the developer [6] in the developing unit thoroughly.
7. Use cleaner to clean the developer adhered to the developing roller.

Note

- Any used developer remaining in the developing roller causes gray background to the image.

8. Pour new developer evenly [3] from above the agitator screw [1] and the conveyance screw [2].
9. Rotate the developing gear [5] and the agitator gear [6] counterclockwise so that the developer gets fully into the developing unit [4].
10. Repeat the steps 8 and 9 to pour the developer completely.
11. Rotate the developing gear counterclockwise and check the height of developer across the entire developing roller [7].
12. Reinstall the preceding parts following the removal steps in reverse.
13. After replacing the developing unit, conduct the following steps.
 - Auto charging potential adjustment
(Refer to [I.5.4.10 Charge Potential Auto. Adj. \(Drum Peculiarity Adjustment\)](#))
 - TonerDensitySensorInit.Auto
(Refer to [I.5.4.11 Toner Density Sensor Init. \(Drum Peculiarity Adjustment\)](#))
 - Auto maximum density adjustment
(Refer to [I.5.4.13 Auto Maximum Density Adj. \(Drum Peculiarity Adjustment\)](#))
 - Auto dot diameter adjustment
(Refer to [I.5.4.14 Auto Dot Diameter Adj. \(Drum Peculiarity Adjustment\)](#))
 - Cartridge set mode
(Refer to [I.5.4.15 Cartridge Set Mode \(Drum Peculiarity Adjustment\)](#))

5.5 Toner supply/collection section**5.5.1 Replacing/cleaning of the toner bottle****(1) Periodically cleaned parts/cycle**

- Toner bottle insertion opening

- : Every 1,000,000 prints *1
- : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Open the toner supply door [1] and pull out the toner supply cover / A assembly [2].
2. Remove the toner bottle [3].

3. Clean around the toner bottle insertion opening [1] with a blower brush and a vacuum cleaner.
4. Reinstall the above parts following the removal steps in reverse.

5.5.2 Replacing the waste toner box

(1) Periodically replaced parts/cycle

- Waste toner box
- : Every 1,000,000 prints *1
- : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Open the toner supply door [1].
2. While pressing the waste toner box [2] in the arrow-marked direction [3], tilt the lock lever [4].
3. Pull out the waste toner box from the main body.

4. Peel off the PET sheet [2] already put on the waste toner box [1] and put it to the toner inlet [3] to cover it.
- Note**
- When disposing the waste toner box, be sure to cover the toner socket with PET sheet to prevent the toner spill while conveying.

5. Reinstall the above parts following the removal steps in reverse.
6. After replacing the waste toner box, conduct the following steps.
Counter reset of the parts counter PM (1,000,000 or 750,000)
(Refer to [I.5.5.1 Maintenance Counter](#))

5.5.3 Replacing the agitator plate assembly

(1) Periodically replaced parts/cycle

- Agitator plate assy /1
: Every 2,000,000 prints *1
: Every 1,500,000 prints *2
- Agitator plate assy /2
: Every 2,000,000 prints *1
: Every 1,500,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Open the front doors /Rt and /Lt.
2. Tilt the lever that pulls out the duplex section. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
3. Remove the cover on the photo conductor section and pull out the intermediate toner hopper to open it. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
4. Close up the connection opening [1] of the intermediate toner hopper with a cleaning pad [2].
5. Attach the toner recovery bag [4] beneath the shutter section [3] connected to the developing unit.

Note

- For the toner recovery bag, use a paper bag made by folding a sheet of paper, or a vinyl bag. Be sure to fix it at an appropriate place so that toner does not spill over. Besides, be sure not to let the bag fall down with the weight of toner.
- The intermediate toner hopper contains toner about half as much as the volumetric capacity of the hopper. Be sure to set up a bag that accommodates of the entire toner amount.

6. Enter 54-00 in "I/O check mode" in the service mode and press the start button.
7. Insert the connecting shutter [1] fully deep and open it to discharge toner in the hopper. (This process takes about 5 minutes.)

Note

- While discharging, be sure to rotate the gear [2] several times in the arrow-marked direction [3] once in a while so that toner that is above the agitator plate assembly is discharged.
- Once no more toner is discharged by rotating the gear [2], it tells that almost all toner has been recovered.

8. Press the stop button.
9. Remove 5 screws [4] and then remove the intermediate toner hopper cover assy [5] in the arrow-marked direction [6].

Note

- The intermediate toner hopper cover assembly [5] is also adhered with toner. Be careful that it does not scatter.

10. Rotate the gear [1] in the arrow-marked direction until 2 screws [3] that hold the agitator plate assy /1 [2] turns up.

Note

- At this time, the sheet of the agitator plate assembly /1 jumps up. Be sure to cover about half of it with paper so that toner does not scatter.

11. Remove the 2 screw [3] and remove the stirring plate assy /1 [2].

Note

- Be sure not to rotate the gear [1] after removing the agitator plate assy /1. Rotating it causes a phase lag with the agitator plate assy /2 [4] and makes it impossible to detect the remaining amount of toner properly.

12. Remove 2 screw [1] and remove the stirring plate /2 assy [2].

13. Reinstall the preceding parts following the removal steps in reverse.

Note

- Some recovered toners have got mixed with impurities. Be sure to dispose it and do not put it back in the intermediate toner hopper.

14. After replacing the agitator plate assys /1 and /2, conduct the following steps.

Counter reset of the parts counter No.14

5.5.4 Replacing the intermediate hopper motor (M11)

(1) Periodically replaced parts/cycle

- Intermediate hopper motor (M11)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

- Open the front doors /Rt and /Lt.
- Pull out the photo conductor section. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
- Disconnect the connector [1].
- Replace the photo conductor section.

Note

- Be sure to pull out the intermediate toner hopper and keep it open.

- Remove the screw [1] from the underneath
- Loosen 2 screws [2] to release the pin [3], and remove the intermediate toner hopper unit [4].

[1] a0g6t3c055ca

a0g6t3c056ca

[2] a0g6t3c057ca

7. Remove 3 screws [1] and remove the rotation hinge assy [2].

8. Disconnect the connector [1].

9. Remove 2 screws [1] and remove the intermediate hopper motor (M11) [2].

10. Reinstall the above parts following the removal steps in reverse.

5.5.5 Replacing the toner supply sleeves /1 and /2

(1) Periodically replaced parts/cycle

- Toner supply sleeve /1
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2
- Toner supply sleeve /2
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the left cover. (Refer to [G.2.2.4 Left cover](#))
2. Open the front doors /Rt [1] and /Lt [2] and the toner supply door [3].
3. Remove the toner bottle [4]. (Refer to [F.5.5.1 Replacing/cleaning of the toner bottle](#))
4. Remove the toner supply door. (Refer to [G.2.2.7 Toner supply door](#))
5. Replace the toner supply cover /A assembly [5].
6. Remove the waste toner box [6]. (Refer to [F.5.5.2 Replacing the waste toner box](#))

7. Remove 6 screws [1] and then remove the protective cover [2].

8. Disconnect 4 connectors [1].
9. Remove 7 screws [2] and then remove the toner supply protective assy [3].

10. Release 2 hose clamps [1] and remove 2 hoses [3] from the toner feed case [2].

Note

- Keep each of the released hose clamps [1] near the connecting opening of each hose [3].
- When the hose [3] is removed from the toner feed case [2], toner may spill out of each hose. Be careful that the inside of the main body does not get stained with the toner.
- The hose connecting section of the toner feed case [2] and the hose [3] are provided with the toner supply installation label [4] that indicates the respective points to which a connection is made. When installing each hose, be sure to make a connection between the points having the corresponding toner supply installation label [4].

11. Release the cable clamp [5] and pull out the hose [3] to the outside of the main body.

Note

- The hose [3] may be damaged when the toner supply unit [6] is removed. Be sure to pull it out to the outside of the main body.

12. Remove 2 screws [1] and pull out the toner supply unit [2].

Note

- When reinstalling the toner supply unit [2], be sure to insert 2 guide pins [3] on the rear side and 2 guide pins [4] on the front side into the respective guide holes [5] of the main body frame.

a0g6t3c063ca

a0g6t3c064ca

a0g6t3c065ca

13. Remove 4 screws [1] and then remove the toner supply protective plate [2].

14. Remove 4 screws [1] and then remove the cover /Up [2].

Note

- When reinstalling the cover /Up [2], set the projection [5] of the cover /Lw [4] to the positioning hole [3] of the cover /Up [2] and then insert the projection [6] of the cover /Up [2] into the slit [8] of the drive board [7].

15. Remove the toner supply sleeves /1 [1].

16. Push the coupling in the arrow-marked direction [2] and remove the toner supply sleeve /2 [3].

17. Reinstall the preceding parts following the removal steps in reverse.

Note

- Be sure to reinstall the toner supply sleeves /1 [1] and /2 [2] in the direction as shown in the drawing.

Note

- After completion of disassembly/assembly of the toner supply unit, be sure to select the code 54-09 (rotation of the toner pump motor (M28) and the air pump motor (M29) in the I/O check mode of the service mode and then press the start button.

When toner drops off into the mixing section due to the vibration of the disassembly/assembly, it may cause the codes SC-2214 and C-2217. (Refer to [I.5.6.8 Removing toner in the toner mixing section](#))

18. After replacing the toner supply sleeves /1 and /2, conduct the following steps.

Counter reset of the parts counter No.15, 16

5.5.6 Replacing the toner bottle motor (M6) and the toner hopper motor (M7)

(1) Periodically replaced parts/cycle

- Toner bottle motor (M6)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Toner hopper motor (M7)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

* 1 1250/1250P/1052

* 2 951

(2) Procedure

1. Remove the toner supply unit. (Refer to [F.5.5.5 Replacing the toner supply sleeves /1 and /2](#))
2. Disconnect the connector [1].
3. Remove 3 screws [2] and remove the toner bottle motor (M6) [3].
4. Disconnect the connector [4].
5. Remove 4 screws [5] and remove the toner hopper motor (M7) [6].
6. Reinstall the above parts following the removal steps in reverse.

5.5.7 Replacing the pump units /Lt and /Rt**(1) Periodically replaced parts/cycle**

- Pump unit /Lt
: Every 14,000,000 prints
- Pump unit /Rt
: Every 12,000,000 prints

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Remove the upper covers /Rr1 and /Rr2. (Refer to [G.2.2.8 Upper cover /Rr1](#) [G.2.2.9 Upper cover /Rr2](#))
3. Remove 6 screws [1] and then remove the exterior mounting plate [2].

4. Disconnect 2 connectors [1].
5. Release 2 hose clamps [2] and remove 2 hoses [4] from the pump unit /Rt [3].

Note

- Keep each of the released hose clamps [2] near the connecting opening of each hose [4].
- When the hose [4] is removed from the pump unit /Rt [3], the toner may spill out of each hose. Be careful that the inside of the main body does not get stained with the toner.
- The hose connecting section of the pump unit /Rt [3] and the hose [4] are provided with the toner supply installation label [5] that indicates the respective points to which a connection is made. When installing each hose, be sure to make a connection between the points having the corresponding toner supply installation label [5].

6. Disconnect 2 connectors [1].
7. Release 2 hose clamps [2] and remove 2 hoses [4] from the pump unit /Lt [3].

Note

- Keep each of the released hose clamps [2] near the connecting opening of each hose [4].
- When the hose [4] is removed from the pump unit /Lt [3], the toner may spill out of each hose. Be careful that the inside of the main body does not get stained with the toner.
- The hose connecting section of the pump unit /Lt [3] and the hose [4] are provided with the toner supply installation label [5] that indicates the respective points to which a connection is made. When installing each hose, be sure to make a connection between the points having the corresponding toner supply installation label [5].

8. Remove the screws [1], 2 each, and remove the pump unit /Lt [2] and the pump unit /Rt [3].

Note

- When reinstalling each pump unit, be sure to insert the toner supply spacer [4] between the attaching surfaces.

9. Reinstall the preceding parts following the removal steps in reverse.
10. After replacing the pump units /Lt and /Rt, conduct the following steps.

Counter reset of the parts counter No.17, 18

5.5.8 Replacing the waste toner box swing motor (M19)

(1) Periodically replaced parts/cycle

- Waste toner box swing motor (M19)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the toner supply unit. (Refer to [F.5.5.5 Replacing the toner supply sleeves /1 and /2](#))
2. Pull out tray /2. (Refer to [F.5.7.5 Removing/reinstalling the tray](#))
3. Disconnect 4 connectors [1].
4. Remove 2 screws [2] and remove the swing tray unit [3].

**Note**

- When reinstalling the swing tray unit [1], be sure to insert 2 guide pins [2] on the rear side into the respective guide holes [3] of the main body frame.

5. Remove the wiring harness [1] from the protective cover /2 [2].
6. Remove 3 screws [3] and then remove the protective cover /2 [2].

7. Disconnect the connector [1].
8. Remove 3 screws [2] and remove the waste toner box swing motor (M19) [3].
9. Reinstall the preceding parts following the removal steps in reverse.

5.5.9 Replacing the air separation motor (M10)

(1) Periodically replaced parts/cycle

- Air separation motor (M10)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
2. Remove 2 screws [1] and remove the exterior reinforcing plate [2].
3. Disconnect the connector [3].
4. Remove 2 screws [4] and remove the air separation motor assy [5].

Note

- When reinstalling the air separation motor assy, be sure to set the projection [7] of the main body to the positioning hole [6].

5. Remove the E-ring [1] and remove the gear [2] and the bearing [3].
6. Remove the E-ring [4] and remove the gear [5].
7. Remove the E-ring [6] and remove the gear [7].

8. Remove the pin [1].
9. Remove 2 screws [2] and then remove the motor mounting plate [3].

10. Remove 2 screws [1], and then remove the dumper [2].
11. Reinstall the preceding parts following the removal steps in reverse.

5.6 Cleaning section

5.6.1 Removing/reinstalling the cleaning section

Note

- Be sure to avoid touching the edge of the cleaning blade with bare hands.
- Before reinstalling the cleaning section, be sure to clean the cleaning section with a blower brush and a cleaning pad.
- When reinstalling the cleaning section, be sure to apply setting powder to the entire periphery of the drum and the cleaning blade regardless of these parts being new or used ones.
- When the drum is applied with setting powder, be sure conduct the following operations before installing the photo conductor section to the main body:
 1. To detect an accurate image density, clean setting powder splashed onto the IDC sensor on the toner control board (TCB) with a cotton swab soaked in alcohol. Do not use any materials other than a cotton swab soaked in alcohol to clean the IDC sensor. When cleaning the IDC sensor in other ways, the IDC sensor performance is not warranty. Be sure to replace TCB.
 2. With the charger unit, LPH unit and the developing unit removed, rotate the drum 1 full turn (to prevent splashing of setting powder to the charger and prevent the image from getting blurred).

(1) Procedure

1. Rotate the drum one full turn by hand.

Note

- Be sure to rotate the drum 1 full turn to prevent the toner on the guide brush inside the cleaning section from falling down.
2. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
 3. Remove the wiring harness [2] from the clamps [1].
 4. Disconnect the connector [3].
 5. Release 2 levers [4] that holding the cleaning section and remove the cleaning section [5].
- #### Note
- When removing the cleaning section, be sure to move it along the ribs [6] of the photo conductor section with the opposite side of the drum contacting section slanted to about 15°.
 - When reinstalling it, be sure to set the reference pin [7] of the photo conductor section to the notch [8] of the cleaning section.
 - When installing the cleaning section, be sure to check that the sheet of the drum scraper Assy touches the drum surface evenly.
 - If the sheet of the drum scraper assy does not touch the drum surface evenly, replace the drum scraper assy.
6. Reinstall the above parts following the removal steps in reverse.

5.6.2 Replacing the drum scraper assy/ scatter preventive filter assy

Note

- Be careful not to bend the edge of the drum scraper assy.

(1) Periodically replaced parts/cycle

- Drum scraper assy
 - : Every 1,000,000 prints *1

- : Every 750,000 prints *2
- Scatter preventive filter assy
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

a0g6i3c391ca

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the cleaning section. (Refer to [F.5.6.1 Removing/reinstalling the cleaning section](#))
3. Remove 4 screws [1] and remove the drum scraper assy [2].
4. Remove the scatter preventive filter assy [3].

5. Reinstall the preceding parts following the removal steps in reverse.

Note

- When installing the drum scraper assy [1], be sure not to touch the edge [2].
- When installing the scatter preventive filter assy, be sure to install it so that the filter side faces outside against the cleaning section.

6. After you replace the drum scraper assy and the scatter preventive filter assy, conduct the following steps.

For the drum scraper assy: Counter reset of the parts counter No. 34

For the scatter preventive filter assy: Counter reset of the parts counter No.35

5.6.3 Replacing the cleaning blade

Note

- When replacing the cleaning blades, be sure to replace 2 blades at the same time.
- Be sure to avoid touching the edge of the cleaning blade with bare hands.
- When replacing the cleaning blades, be sure to conduct "Blade Set Mode".

(1) Periodically replaced parts/cycle

- Cleaning blade
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

[1]

[2]

[2]

[1]

[4]

[3]

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the cleaning section. (Refer to [F.5.6.1 Removing/reinstalling the cleaning section](#))
3. Remove the drum scraper assy and the scatter preventive filter assy. (Refer to [F.5.6.2 Replacing the drum scraper assy/ scatter preventive filter assy](#))
4. Remove the screw [1] and remove the cleaning blade /2 [2].
5. Install a new cleaning blade /2.

6. With the blade release arm [1] raised in the arrow-marked direction [2], rotate the blade replacement lever [3] in the arrow-marked direction [4] to turn the cleaning blade /2.

Note

- Be sure to keep the blade release arm raised up, do not let go of it.

7. Bring down the blade release arm [1] in the arrow-marked direction [2].

Note

- Be sure to keep hold of the blade replacement lever [3] being rotated, do not let go of it.

8. Release the hand that is holding the blade replacement lever.

9. Remove the screw [1] and then remove the cleaning blade /1 [2].
10. Install a new cleaning blade /1.
11. Remove toner adhered to the lower [3] and upper [4] blade sides of the cleaning section with a cleaning pad.
12. Conduct the following items in order.
 - Setting powder application
 - Blade auto replacement spring charge

13. Reinstall the parts after that following the removal steps in reverse.

Note

- After replacing the cleaning blades /1 and /2, be sure to check to see if the blade replacement lever [1] has been pulled.
- After replacing the cleaning blades /1 and /2, be sure to conduct the blade set mode in the service mode to prevent the blade from curling up. (Refer to [1.5.4.9 Blade Setting Mode \(Drum Peculiarity Adjustment\)](#))
- Be sure to avoid using the blade set mode other than when replacing the cleaning blade. Otherwise, the cleaning blade count of the fixed parts count is reset so that the blade is not replaced automatically at the correct timing.

5.6.4 Cleaning/replacing the toner seal board**Note**

- Be sure to avoid touching the edge of the cleaning blade with bare hands.

(1) Periodic cleaning cycle

- Toner seal board
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

(2) Periodically replaced parts/cycle

- Toner seal board
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2

*1 1250/1250P/1052

*2 951

(3) Procedure

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the cleaning section. (Refer to [F.5.6.1 Removing/reinstalling the cleaning section](#))
3. Remove the screws [1] and [2], and then remove the toner seal board [3].
4. Clean the sheet section [4] of the toner seal board with a blower brush and a cleaning pad.

Note

- When reinstalling the toner seal board, be sure to first of all install the screw [1].
- When both sides [5] of the sheet section of the toner seal board get inside of the toner guide brush [6], an overflow toner may occur. On such an occasion, correct the warp so that the warp of the sheet section becomes parallel to the toner guide brush or it turns a little to this side (less than 1mm).

5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the toner seal board, conduct the following items.
Counter reset of the parts counter No.41

5.6.5 Replacing the toner guide brush assy/scattering prevention felt/seal plates /Fr and /Rr**Note**

- Be sure to avoid touching the edge of the cleaning blade with bare hands.
- When reinstalling the toner guide brush assy, apply setting powder uniformly with the toner guide brush assy removed.
- Be sure to avoid touching the brush section of the toner guide brush with bare hands. Also, be careful that the brush section does not come in direct contact with other objects.

(1) Periodically replaced parts/cycle

- Toner guide brush assembly
 - : Every 2,000,000 prints *1
 - : Every 1,500,000 prints *2
- Scattering prevention felt
 - : Every 2,000,000 prints *1
 - : Every 1,500,000 prints *2
- Seal plate /Fr
 - : Every 2,000,000 prints *1
 - : Every 1,500,000 prints *2
- Seal plate /Rr
 - : Every 2,000,000 prints *1
 - : Every 1,500,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

a0g6t3c080ca

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the cleaning section. [F.5.6.1 Removing/reinstalling the cleaning section](#)
3. Remove the drum scraper assy and the scatter preventive filter assy. (Refer to [F.5.6.2 Replacing the drum scraper assy/ scatter preventive filter assy](#))
4. Remove the cleaning blade. (Refer to [F.5.6.3 Replacing the cleaning blade](#))
5. Remove the toner seal board. (Refer to [F.5.6.4 Cleaning/replacing the toner seal board](#))
6. Remove the screw [1] and then remove the seal plate /Fr [2].
7. Remove the screw [3] and then remove the seal plate /Rr [4].

8. Move the toner guide brush assy [1] in the order of the arrow-marks [2] and then [3] and remove it.

Note

- When reinstalling the toner guide brush assy, be sure to set the pin [6] of the toner guide brush assy to the coupling slit [5] of the cleaning section [4].

9. After removing the toner guide brush assy, clean up the installation section of the seal plates /Fr and /Rr with a vacuum cleaner.

10. Remove the C-clip [3], the bearing [4], the scattering prevention felt [5], the bearing fixing member [6] and the toner prevention collar [7] in this order from the shaft [2] of the toner guide brush assy [1].

Note

- Be careful that the toner prevention collar does not get lost.

11. Reinstall the preceding parts following the removal steps in reverse.
12. After replacing the toner guide brush assy, the scattering prevention felt and the seal plate /Fr and /Rr, conduct the following steps.
- Setting powder application
- For the toner guide brush assy: Counter reset of the parts counter No.36 or No.37
- For the seal plate /Fr: Counter reset of the parts counter No.39
- For the seal plate /Rr: Counter reset of the parts counter No.38

5.6.6 Replacing the guide plate assy**(1) Periodically replaced parts/cycle**

- Cleaning gear /2 assy
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Cleaning gear /3
 - : Every 32,000,000 prints *1
 - : Every 24,000,000 prints *2
- Guide plate assy
 - : Every 2,000,000 prints *1
 - : Every 1,500,000 prints *2
- Guide shaft
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the cleaning section. (Refer to [F.5.6.1 Removing/reinstalling the cleaning section](#))
3. Remove the drum scraper assy and the scatter preventive filter assy. (Refer to [F.5.6.2 Replacing the drum scraper assy/ scatter preventive filter assy](#))
4. Remove the cleaning blade. (Refer to [F.5.6.3 Replacing the cleaning blade](#))
5. Remove the toner seal board. (Refer to [F.5.6.4 Cleaning/replacing the toner seal board](#))
6. Remove the seal plate and the toner guide brush assy. (Refer to [F.5.6.5 Replacing the toner guide brush assy/scattering prevention felt/seal plates /Fr and /Rr](#))
7. Remove the E-ring [1] and remove the cleaning mounting lever collar [2].
8. Remove 2 screws [3] and remove the drive reinforcing plate [4].

Note

- When reinstalling the drive reinforcing plate, be sure to tighten the screws [3] in the order after fastening each of the cleaning mounting lever collar with the E-ring.

9. Remove the cleaning gear /2 assy [1].

10. Remove the retaining rings [1], 1 each, and remove 2 cleaning gears /3 [2].

11. Remove the spacer [3].

Note

- When the cleaning gear /2 assy and the cleaning gear /3 [2] are removed, there is a possibility that the bearing [4] and the splash prevention felt [5] come off. If the felt become detached, make sure to replace it with a new one.

12. Remove the E-ring [6] and remove the cleaner bearing [7].

13. Pull out the guide shaft [8].

Note

- When reinstalling the guide shaft [1], be sure to insert it with the edge [3] of the guide plate assy [2] lowered by the scale.

Note

- When reinstalling the guide shaft [1], be sure to insert it while holding it down from the outside so that the bearing [2] does not come off.
- If the bearing and the splash prevention felt [3] come off while inserting the guide shaft, be sure to replace the splash prevention felt with a new one.

14. Remove 2 screws [1] and then remove the guide plate assy [2].

Note

- **When reinstalling the toner guide plate assembly, be sure to hit it against the lower side before fixing it.**

15. Clean up the exterior of the cleaning unit with a cleaning pad and a blower brush.

16. Reinstall the preceding parts following the removal steps in reverse.

17. After replacing the cleaning gear /2 assy and /B, the guide plate assy and the guide shaft, conduct the following steps.

- Setting powder application

For the cleaning gear /2 assy: Counter reset of the parts counter No.43

For the cleaning gear /3: Counter reset of the parts counter No.44

For the guide plate assy: Counter reset of the parts counter No.40

For the guide shaft: Counter reset of the parts counter No.42

5.6.7 Replacing the discharge wire / PCC unit

(1) Periodically replaced parts/cycle

- PCC unit
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Discharge wire
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the drum. (Refer to [F.5.3.8 Replacing the drum/cleaning of the photo conductor section](#))
2. Pull the PCC fixing knob [1] and rotate it 90 degrees.

a0g6t3c387ca

3. Move the PCC unit [1] in the arrow-marked direction [2]. Lift the PCC unit [1] in the arrow-marked direction [3] to remove it.

Note

- When removing the PCC unit, be sure to remove the front side first and then remove the rear side. Removing the PCC in reverse order may damage the spring of the power feed section and cause C-2705.

[1] [2] [3]

[4] [5]

a0g6t3c392ca

Note

- When reinstalling the PCC unit [1], be sure to reinstall the rear side first and then reinstall the front side.
- When reinstalling the PCC unit [1], be sure to check that the rear side [2] of the PCC unit is contacted with the power feed section [3] of the drum stand and the locking shaft [4] is inserted in the front side [5] of the PCC unit.

4. Remove 4 claws [1] and remove 2 covers [2].

5. Remove the spring [1] and remove the discharge wire [2] from the hook [3].
6. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the discharge wire [2], be sure to install the discharge wire [2] to the hook [3] first and then install the spring [1].
- The path of the discharge wire [2] should be the same as the illustration.

7. After replacing the discharge wire / PCC unit, conduct the following steps.
For the discharge wire: Counter reset of the parts counter No.30
For the PCC unit: Counter reset of the parts counter No.31

5.6.8 Cleaning when removing the cleaning unit (when conducting maintenance work)

Note

- When removing the cleaning unit, be sure to clean thoroughly both the inside and the inner wall of the cleaning unit with as little toner left as possible. When cleaning is insufficient, toner spills over the conveyance section.

(1) Procedure

1. Pull out the photo conductor section from the main body. (Refer to [F.5.3.1 Removing/reinstalling the photo conductor section](#))
2. Remove the cleaning section. (Refer to [F.5.6.1 Removing/reinstalling the cleaning section](#))
3. Remove the drum scraper assy and the scatter preventive filter assy. (Refer to [F.5.6.2 Replacing the drum scraper assy/ scatter preventive filter assy](#))
4. Remove the cleaning blade. (Refer to [F.5.6.3 Replacing the cleaning blade](#))
5. Remove the toner seal board. (Refer to [F.5.6.4 Cleaning/replacing the toner seal board](#))
6. Remove the toner guide brush assy and the seal plates /Fr and / Rr. (Refer to [F.5.6.5 Replacing the toner guide brush assy/ scattering prevention felt/seal plates /Fr and /Rr](#))
7. Tap the casing [1] section softly to let the toner adhering to the inner wall drop off.
8. Rotate the gear [2] in the arrow-marked direction to discharge toner to the outside.
9. Repeat the steps 5 and 6 until there is no toner discharged. Then clean the inside with a vacuum cleaner at the last.
10. Clean the cleaning unit mounting place (photo conductor section) with a vacuum cleaner.

Note

- When cleaning it with a vacuum cleaner, be careful that the vacuum cleaner does not come into contact with drum.

11. Reinstall the above parts following the removal steps in reverse.

5.7 Paper feed section**5.7.1 Removing/reinstalling the pick-up roller assembly/separation roller assembly****Note**

- The method for replacing the pick-up roller assy/separation roller assy is common for tray1 and tray2. The explanation here is given for tray /1.
- After completion of the installation, rotate the pick-up roller in the direction of the paper feed (counterclockwise as seen from the front) to check to see if the paper feed roller, the belt and the coupling section rotate smoothly. The rotation of the pick-up roller is restricted only to the direction of the paper feed (counterclockwise as seen from the front) and be sure not to turn it clockwise.
- Be sure to take note that the direction of the pick-up roller is different for the main body and the PF.

(1) Procedure

1. When the power switch is off, open the toner supply door.
2. Raise up the tray lock lever [1] slightly and pull out the tray [2].

a0g6t3c330ca

3. Turn the pick-up roller [1] in the direction of the arrow (counterclockwise as seen from the front side) to make the coupling [2] upright.

Note

- The rotation of the pick-up roller [1] is restricted only to the arrow-marked direction (counterclockwise). It does not rotate in the reverse direction (clockwise). So, be sure not to turn it in this direction forcibly.

4. Remove 2 C-clips [3].

5. Remove the bearing /Fr [1].
6. Slide the bearing /Rr [2] to the rear side.

Note

- When installing the bearing /Fr [1], /Rr [2], insert it in the notch [5] of the metal frame while pressing down a little the metal frame [3] of the pick-up roller assembly to make level the flat portion [4] of the bearing /Rr [2]. Then insert the bearing /Fr [1] in the same manner as with the bearing /Rr.

1050fs2702c

7. Hold the pick-up roller assembly [1] by hand and lift the paper feed roller [3] up to tilt while rotating it around the shaft [2] of the pick-up roller, and then remove it from the notch [4] of the bearing and the coupling [5].

Note

- When removing the pick-up roller [1], be careful not to damage the sensor [7] with the metal frame [6].

8. Remove the pick-up roller shaft [2] from the arm [1] of the paper feed guide plate and then remove the pick-up roller assembly [3].

1050fs2704c

9. Remove 2 C-clips [1] and remove the entrance guide plate [2].

a0g6t3c331ca

10. Remove the C-clip [1].

11. Remove the separation roller [3] together with the shaft from the notch [2].

a0g6t3c332ca

12. Remove 2 screws [1].

Note

- When reinstalling it, fasten it with the screws while pressing down the separation roller assembly [2].

13. After pulling out the front side of the separation roller assembly [2], remove the coupling [3] in the rear from the joint [4].

Note

- When reinstalling it, be sure to engage the coupling pin [3] with the joint [4] before installation.

14. Reinstall the preceding parts following the removal steps in reverse.

Note

- After completion of the installation, hold the pick-up roller slightly and rotate it in the direction of the paper feed (counterclockwise as seen from the front) to check to see if the paper feed roller, the belt and the coupling section rotate smoothly. The rotation of the pick-up roller is restricted only to the direction of the paper feed (counterclockwise as seen from the front) and be sure not to turn it clockwise.

a0g6t3c333ca

5.7.2 Replacing the pick-up roller/paper feed roller

Note

- The outward appearance of the collar is identical for the paper feed roller and the separation roller. However, the collar of the paper feed roller has a one-way mechanism on the inside while the collar of the separation roller does not. Be careful not to confuse one with the other.

(1) Periodically replaced parts/cycle

- Pick-up roller
 - : Every 3,000,000 prints (Actual replacement cycle: Every 500,000 feeds) *1
 - : Every 1,500,000 prints (Actual replacement cycle: Every 500,000 feeds) *2
- Paper feed roller
 - : Every 3,000,000 prints (Actual replacement cycle: Every 500,000 feeds) *1
 - : Every 1,500,000 prints (Actual replacement cycle: Every 500,000 feeds) *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the pick-up roller assembly.
2. Remove the C-clip [1], remove the coupling bearing [2] and then remove the mounting bracket [3].

3. Pull out the shaft [3] from the collar [1] and remove the pick-up roller [2] from the collar [1].

Note

- When reinstalling it, take note of the direction of the pick-up roller. Be sure to insert the collar [1] from the side provided with the groove [4].

4. Remove the C-clip [1] and pull out the collar [2] and the paper feed roller [3].

Note

- When reinstalling it, take note of the direction of the paper feed roller. Be sure to insert the collar [2] from the side provided with the groove [4].

5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the pick-up roller and paper feed roller, conduct the following steps.

In case of 1250/1250P/1052

For the pick up roller of the tray1: Counter reset of the parts counter No.86

For the pick up roller of the tray2: Counter reset of the parts counter No.90

For the paper feed roller of the tray1: Counter reset of the parts counter No.87

For the paper feed roller of the tray2: Counter reset of the parts counter No.91

For 951

For the pick up roller of the tray1: Counter reset of the parts counter No.66

For the pick up roller of the tray2: Counter reset of the parts counter No.70

For the paper feed roller of the tray1: Counter reset of the parts counter No.67

For the paper feed roller of the tray2: Counter reset of the parts counter No.71

5.7.3 Replacing the separation roller

Note

- The outward appearance of the collar is identical for the separation roller and the paper feed roller. However, the collar of the paper feed roller has a one-way mechanism on the inside while the collar of the separation roller does not. Be careful not to confuse one with the other.

(1) Periodically replaced parts/cycle

- Separation roller
 - : Every 3,000,000 prints (Actual replacement cycle: Every 500,000 feeds)*₁
 - : Every 1,500,000 prints (Actual replacement cycle: Every 500,000 feeds)*₂

*₁ 1250/1250P/1052

*₂ 951

(2) Procedure

1. Remove the separation roller together with the shaft.
2. Remove the C-clip [1] and pull out the shaft [2] in the arrow-marked direction.

3. Remove the gear [2] and collar [3] when pulling out the shaft [1].

Note

- When reinstalling it, take note of the direction of the separation roller. Be sure to insert it into the shaft [1] from the side provided with the groove [4].
- The outward appearance is identical for the collar [5] of the separation roller and the collar [6] of the paper feed roller. However, the one-way mechanism [7] is provided on the inside of the collar [6] of the paper feed roller with no mechanism provided for the collar [5] of the separation roller. Be careful not to confuse one with the other.

4. Reinstall the preceding parts following the removal steps in reverse.
5. After replacing the separation roller, conduct the following item.
In case of 1250/1250P/1052
 - For the separation roller of the tray1: Counter reset of the parts counter No.87
 - For the separation roller of the tray2: Counter reset of the parts counter No.91
 For 951
 - For the separation roller of the tray1: Counter reset of the parts counter No.67
 - For the separation roller of the tray2: Counter reset of the parts counter No.71

5.7.4 Replacing the torque limiter /A and the cover**(1) Periodically replaced parts/cycle**

- Torque limiter /A
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *1
 - : Every 18,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2
- Cover
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *1
 - : Every 18,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the pick-up roller assembly. (Refer to [F.5.7.1 Removing/reinstalling the pick-up roller assembly/separation roller assembly](#))
2. Remove the separation roller assy. (Refer to [F.5.7.1 Removing/reinstalling the pick-up roller assembly/separation roller assembly](#))
3. Remove the separation roller. (Refer to [F.5.7.3 Replacing the separation roller](#))
4. Remove the C-clips [1] and the screw [2], and then remove the cover [3].

5. Remove the E-ring [1] and move the shaft [2] in the arrow-marked direction [3].
6. Move the torque limiter /A [4] in the arrow-marked direction [5].

a0g6t3c336ca

7. Remove the pin [1], and pull out the shaft [2] to remove the torque limiter /A [3].
8. Reinstall the preceding parts following the removal steps in reverse.

5.7.5 Removing/reinstalling the tray

⚠ Note:

- Be sure to perform this operation with 2 people because the tray unit is heavy.

Note

- The procedure for removing/reinstalling the trays /1 to /2 is identical. The explanation here is made of the tray /1.
- When raising up the tray, be sure to hold it at the specified positions. Holding it at positions other than those positions specified damage the tray, thus resulting in a paper feed jam.

(1) Procedure

a0g6t3c329ca

1. Open the toner supply door.
2. Raise up the tray lock lever [1] slightly and pull out the tray [2].
3. If any paper remaining, remove it.

4. Remove the stopper screws [2], 1 each, provided at either side of the rail [1] and pull the tray further out.

1050fs2716c

5. Remove the screws [1], 1 each, provided at either side of the rail, hold the tray [2] at the specified positions [3] and raise it up to remove it.

Note

- When raising up the tray, be sure to hold it at the specified positions [3] and raise it up with 2 persons.
- Be sure to avoid holding it at positions [4] that can be easily deformed. This may affect the paper tray, thus resulting in a jam.
- When reinstalling it, be sure to check to see if the knobs [5] provided at the 4 places on the rail are securely in the notches [6] of the tray.

6. Reinstall the above parts following the removal steps in reverse.

1050fs2717c

5.7.6 Replacing the paper feed clutch/separation clutch**(1) Periodically replaced parts/cycle**

- Paper feed clutch /1 (CL4), /2 (CL6)
: Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)*1

: Every 10,500,000 prints (Actual replacement cycle: Every 3,000,000 feeds)*2

- Separation clutch /1 (CL5), /2 (CL7)

: Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)*1

* 1 1250/1250P/1052

* 2 951

(2) Procedure

1050fs2713c

1. Remove the rail stopper screw of the tray and pull out the tray.
2. Remove 3 screws [1] and then remove the clutch cover [2].

1050fs2714c

3. Disconnect 2 connectors [1] and remove the 2 wire binding bands [2].
4. Remove 2 C-clips [3] and then remove the paper feed clutch [4] and the separation clutch [5].

Note

- When reinstalling it, be sure to engage the stopper [6] of the clutch with the stopper section [7].

5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the paper feed clutches /1 (CL4) and /2 (CL6) and the separation clutches /1 (CL5) and /2 (CL7), conduct the following steps.

In case of 1250/1250P/1052

- For the paper feed clutch /1: Counter reset of the parts counter No.88

- For the paper feed clutch /2: Counter reset of the parts counter No.92

- For the separation clutch /1: Counter reset of the parts counter No.89

- For the separation clutch /2: Counter reset of the parts counter No.93

For 951

- For the paper feed clutch /1: Counter reset of the parts counter No.68

- For the paper feed clutch /2: Counter reset of the parts counter No.72

- For the separation clutch /1: Counter reset of the parts counter No.69

- For the separation clutch /2: Counter reset of the parts counter No.73

5.7.7 Replacement procedure of the parts at the separation section

(1) Periodically replaced parts/cycle

- Paper feed input shaft
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2
- Bearing /D
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2
- Reverse rotation shaft
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2
- Bearing /C
 - : Every 24,000,000 prints *1

- : Every 18,000,000 prints *2
 - Input gear
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)*1
 - : Every 18,000,000 prints (Actual replacement cycle: Every 6,000,000 prints) *2
- * 1 1250/1250P/1052
* 2 951

(2) Procedure

a0g6t3c305ca

1. Remove the pick-up roller assembly. (Refer to [F.5.7.1 Removing/reinstalling the pick-up roller assembly/separation roller assembly](#))
2. Remove the separation roller assy. (Refer to [F.5.7.1 Removing/reinstalling the pick-up roller assembly/separation roller assembly](#))
3. Remove the paper feed clutch and the separation clutch. (Refer to [F.5.7.6 Replacing the paper feed clutch/separation clutch](#))
4. Remove 2 screws [1] and remove the separation cover [2].

a0g6t3c306ca

5. Remove 3 screws [1], and then remove the paper feed input assy [2], the bearing /D [3], and the washer[4].

a0g6t3c307ca

6. Remove 2 E-rings [1], and remove the input gear [2], the pin [3], washer [4], the mounting plate [5], the washer [6], and the bearing /D [7].

Note

- When removing the input gear [2], be careful not to drop the pin [3].

a0g6t3c308cb

7. Remove 2 E-rings [1], and remove the washer [2] and the bearing / D [3].
8. Move the reverse rotation shaft assy [4] in the arrow-marked direction to remove it from the notch [5].

a0g6t3c308ca

Note

- For the 951, remove the E-ring [1] and the gear [2], and remove the E-ring [3] to slide the reverse rotation shaft assy [4] in the arrow-marked direction.

- Remove the washer [1] and the bearing /C [2].
- Remove the screw [3] and remove the coupling [4].
- Remove the E-ring [5] from the reverse rotation shaft [6].
- Reinstall the preceding parts following the removal steps in reverse.

5.8 Vertical conveyance section**5.8.1 Removing/reinstalling the vertical conveyance unit****(1) Procedure**

1050fs2732c

- Remove the right cover.
- Pull the knob [1] and remove the paper dust guide holder [2].

Note

- The roller get stained with paper dust that has gathered in the paper dust guide holder [2]. Be sure to remove it when removing the vertical conveyance unit.

- Disconnect the connector [3].
- Remove 4 screws [4] and then remove the vertical conveyance unit [5].

Note

- When placing the vertical conveyance unit, be sure to place it with the jam open/close door side down. Be sure not to put the roller side down since it damages the gear [6]. When placing it with the roller side down, be sure to remove 2 gears [6].

- Reinstall the above parts following the removal steps in reverse.

Note

- Pulling out the main body tray with the vertical conveyance unit removed damages the guide roller that brings down forcibly the pick-up roller of the main body tray. Be sure not to pull out the main body tray with the vertical conveyance unit removed.
- When reinstalling it, be sure to move the vertical conveyance unit [5] to the rear side and tighten it up with the screws [4].

5.8.2 Replacing the pre-registration clutch/vertical conveyance clutch**(1) Periodically replaced parts/cycle**

- Pre-registration clutch /1 (CL1), /2 (CL3)
 - : Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds) *1
 - : Every 14,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds) *2
- Vertical conveyance clutch (CL2)
 - : Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds) *1
 - : Every 14,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds) *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the right cover.
2. Remove the vertical conveyance unit. (Refer to [F.5.8.1 Removing/reinstalling the vertical conveyance unit](#))
3. Remove 2 C-clips [1] and then remove 2 gears [2].

Note

- When reinstalling it, take note of the direction of the gears.

4. Disconnect 3 connectors [1] and remove 3 wire binding bands [2].
5. Remove 3 C-clips [3] and then remove the pre-registration clutch / 1 (CL1) [4], the vertical conveyance clutch (CL2) [5], and the pre-registration clutch / 2 (CL3) [6].

Note

- When reinstalling it, set the stopper [7] of the clutch to the screw [8].

6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the pre-registration clutches /1 (CL1) and /2 (CL3) and the vertical conveyance clutch (CL2), conduct the following steps.

In case of 1250/1250P/1052

For the pre-registration clutch /1: Counter reset of the parts counter No.98

For the pre-registration clutch /2: Counter reset of the parts counter No.100

For the vertical conveyance clutch: Counter reset of the parts counter No.99

For 951

For the pre-registration clutch /1: Counter reset of the parts counter No.78

For the pre-registration clutch /2: Counter reset of the parts counter No.80

For the vertical conveyance clutch: Counter reset of the parts counter No.79

5.8.3 Replacing the pre-registration rollers /1 and /2, the pre-registration bearing, the conveyance rollers /2 and /3, and the torque limiter**(1) Periodically replaced parts/cycle**

- Pre-registration roller /1 and /2
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *1
 - : Every 18,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2
- Pre-registration bearing
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *1
 - : Every 18,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2
- Conveyance roller /2
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *1
 - : Every 18,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2
- Conveyance roller /3
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *1
 - : Every 18,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2
- Torque limiter
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *1
 - : Every 18,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2

*1 1250/1250P/1052

*2 951

(2) Procedure

a0g6t3c310ca

a0g6t3c311ca

a0g6t3c385ca

1. Remove the right cover.
2. Remove the vertical conveyance unit. (Refer to [F.5.8.1 Removing/reinstalling the vertical conveyance unit](#))
3. Remove the pre-registration clutches /1 (CL1) and /2 (CL3) and the vertical conveyance clutch (CL2). (Refer to [F.5.8.2 Replacing the pre-registration clutch/vertical conveyance clutch](#))
4. Remove the E-ring [1] and remove the torque limiter [2] together with the shaft.

5. Remove the E-ring [1], and then remove the collar [2], the gear [3] and the torque limiter [4].

6. Disconnect 2 connectors [1] and the connector [2], and remove the wire binding bands [3] at the 5 places.
7. Remove 4 screws [4] (one each at either side of each roller) and then remove the roller covers /1 [5] and /2 [6].

Note

- Be careful not to damage the sensor.
- When removing the roller covers /1 [5] and /2 [6], be sure to pull up the upper side.
- When reinstalling the roller covers /1 [5] and /2 [6], be sure to set the grooves [7] at both sides to the projection [8] and then press it slightly in the direction of the paper through slit [9].

1050fs2736c

8. Remove the E-rings [1], 1 each for 4 places, the pre-registration bearings [2], 1 each, the pre-registration rollers /1 [3] and /2 [4].

Note

- When removing and reinstalling the pre-registration rollers /1 [3] and /2 [4], be careful not to damage them with the corners of the guide plate.
- When reinstalling the pre-registration bearing [2], raise the conveyance guide plate so that it gets into the jam release condition. In this way, the bearing can be installed easily.

1050fs2738c

9. Remove 2 screws [1] and remove the cover [2].

1050fs2739c

10. Remove 2 E-rings [1], 2 belt stoppers [2], the conveyance belt /A [3], 2 conveyance pulleys [4] and 2 pins [5].

1050fs2740c

a0g6i3c312ca

11. Remove the E-rings [1], 1 each for 4 places, and then remove the plastic washers [2], 1 each, the bearings [3], 1 each, the conveyance rollers /2 [4] and /3 [5].

12. Remove the E-ring [1], the gear [2] and the pin [3], and then remove the conveyance roller /2 [4].

13. Reinstall the preceding parts following the removal steps in reverse.

Note

- After completion of the installation, check to see if each roller rotates smoothly.

14. After replacing the pre-registration rollers /1, /2, the conveyance rollers /2 and /3, conduct the following item.

In case of 1250/1250P/1052

For the pre-registration roller /1: Counter reset of the parts counter No.104

For the pre-registration roller /2: Counter reset of the parts counter No.105

For the conveyance rollers /2 and /3: Counter reset of the parts counter No.103

For 951

For the pre-registration roller /1: Counter reset of the parts counter No.84

For the pre-registration roller /2: Counter reset of the parts counter No.85

For the conveyance rollers /2 and /3: Counter reset of the parts counter No.83

5.8.4 Replacing the conveyance pulley and the conveyance belt /A

(1) Periodically replaced parts/cycle

- Conveyance pulley
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2
- Conveyance belt /A
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2

* 1 1250/1250P/1052

* 2 951

(2) Procedure

1. Remove the right cover. (Refer to [G.2.2.3 Right cover](#))
2. Remove the vertical conveyance unit. (Refer to [F.5.8.1 Removing/reinstalling the vertical conveyance unit](#))
3. Remove 2 screws [1] and remove the cover [2].

4. Remove 2 E-rings [1], 2 belt stoppers [2], the conveyance belt /A [3], 2 conveyance pulleys [4] and 2 pins [5].
5. Reinstall the preceding parts following the removal steps in reverse.

**5.8.5 Replacing the conveyance roller /1 and the paper feed gear /B****(1) Periodically replaced parts/cycle**

- Conveyance roller /1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds (outputs))
- Paper feed gear /B
 - : Every 40,000,000 prints *1
 - : Every 24,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1050fs2741c

1050fs2742c

1. Remove the right cover.
2. Remove the vertical conveyance unit. (Refer to [F.5.8.1 Removing/reinstalling the vertical conveyance unit](#))
3. Remove the E-ring [1] and remove the paper feed gear /B [2] and the pin [3].

Note

- When installing the E-ring [1], be careful not to damage the teeth of the paper feed gear /B [2].

4. Remove 2 E-rings [1], and remove 2 washers [2] and 2 bearings [3], and then remove the conveyance roller /1 [4].

Note

- When removing and reinstalling the conveyance roller /1 [4], be careful that it does not get damaged by the corners of the guide plate.
- When reinstalling the bearing [3], raise the conveyance guide plate so that it gets into the jam release condition. In this way, the bearing can be installed easily.

5. Reinstall the preceding parts following the removal steps in reverse.

Note

- After completion of the installation, check to see if the roller rotates smoothly.

6. After replacing the conveyance roller /1, conduct the following item.

In case of 1250/1250P/1052

For the conveyance roller /1: Counter reset of the parts counter No.102

For 951

For the conveyance roller /1: Counter reset of the parts counter No.82

5.8.6 Replacing the conveyance exit roller peripheral parts**(1) Periodically replaced parts/cycle**

- Vertical conveyance exit roller
: Every 12,000,000 prints
- Paper dust removing brush shaft
: Every 12,000,000 prints
- Bearing /E
: Every 24,000,000 prints *1
: Every 18,000,000 prints *2
- Cleaning gear /B
: Every 24,000,000 prints *1
: Every 18,000,000 prints *2

- Scraper shaft
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2
- Paper feed cleaning gear /B
 - : Every 40,000,000 prints *1
 - : Every 24,000,000 prints *2
- Paper feed gear /A
 - : Every 40,000,000 prints *1
 - : Every 24,000,000 prints *2
- Paper exit input gear
 - : Every 40,000,000 prints *1
 - : Every 24,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1050fs2743c

1050fs2745c

1. Remove the right cover.
2. Remove the vertical conveyance unit. (Refer to [F.5.8.1 Removing/reinstalling the vertical conveyance unit](#))
3. Remove 4 screws [1] and then remove the cover [2].

4. Remove the E-ring [1] and remove the paper exit input gear [2] and the pin [3].

Note

- Do not wipe off the grease that applied to the groove which receives the pin [4].

5. Remove 2 screws [1] and remove the gear cover [2] and the bearing /E [3].

Note

- When installing the bearing /E [3], be sure to install it from the inside to the gear cover [2].

1050fs2746c

a0g6t3c313ca

a0g6t3c314ca

6. Remove the E-ring [1] and remove the paper feed cleaning gear /B [2] and the pin [3].

Note

- The gear removed at the step4 is different from the one removed at the step6. Be careful not to confuse one with the other.

7. Remove the paper dust removing brush shaft [1], 2 bearings /E [2] and the paper dust removing brush [3].

8. Remove the E-ring [1] and remove the paper feed gear /A [2] and the pin [3].

a0g6t3c315ca

[4]

[1]

a0g6t3c317ca

9. Disconnect the connector [1] and remove 2 wire binding bands [2].
10. Remove 4 screws [3] and then remove the sensor mounting plate [4].

11. Remove 2 E-rings [1], 2 washers [2] and 2 bearings /E [3], and remove the conveyance exit roller [4].

12. Remove the E-ring [1] and then remove the Cleaning gear /A [2].

a0g6t3c318ca

13. Remove 2 E-rings [1] and remove the scraper shaft [2].
14. Reinstall the preceding parts following the removal steps in reverse.
15. After replacing the conveyance exit roller and the paper dust removing brush shaft, be sure to conduct the followings.
 - For 1250/1250P/1052
 - For the conveyance exit roller: Counter reset of the parts counter No.101
 - For the paper dust removing brush shaft: Counter reset of the parts counter No.106
 - For 951
 - For the conveyance exit roller: Counter reset of the parts counter No.81
 - For the paper dust removing brush shaft: Counter reset of the parts counter No.86

5.8.7 Replacing the paper dust removing brush and the paper dust guide holder

(1) Periodically replaced parts/cycle

- Paper fur brush
 - : Every 4,000,000 prints *1
 - : Every 2,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds) *2
- Paper dust guide holder
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1050fs2750c

1. Pull the knob [1] and remove the paper dust guide holder [2].

2. Remove the screw [1] and pull out the holder [2] from the paper dust removing brush [3].

Note

- When reinstalling the holder [2], press the paper dust removing brush [3] to the arrow-marked direction [4] and fasten it with the screws.

[4] 1050fs2752c

3. Remove the paper dust removing brush shaft [1] from the coupling [2], and remove the paper dust removing brush [3], and then remove the bearing /E [4].
4. Reinstall the preceding parts following the removal steps in reverse.
5. After replacing the paper dust removing brush and the paper dust guide holder, be sure to conduct the followings.

In case of 1250/1250P/1052

For the paper dust removing brush: Counter reset of the parts counter No.96

For the paper dust guide holder: Counter reset of the parts counter No.97

For 951

For the paper dust removing brush: Counter reset of the parts counter No.76

For the paper dust guide holder: Counter reset of the parts counter No.77

5.8.8 Cleaning of the paper dust guide holder

(1) Procedure

1050fs2753c

1. Pull the knob [1] and remove the paper dust guide holder [2].
2. Clean the paper dust guide holder [2] with the air brush.
3. Reinstall the above parts following the removal steps in reverse.

5.9 DUPLEX SECTION

5.9.1 Pulling out/reinstalling the duplex section

⚠ Note:

- Be sure to avoid forcibly turning ON the interlock switches /1 (MS1) and /2 (MS2) with the duplex section pulled out. Otherwise, a high voltage unexpectedly develop.

(1) Procedure

1. Open the front door /Rt [1] and the front door /Lt [2].
2. While pressing the lock release lever [3] with a driver in the arrow-marked direction, down the lever [4] that pulls out the duplex section to pull out the duplex section [5].
3. When reinstalling it, push in the duplex section and bring up the lever that pulls out the duplex section.

5.9.2 Cleaning of the paper dust removing brush for the registration roller /Lw**(1) Periodic cleaning cycle**

- Paper dust removing brush for the registration roller /Lw
 - : Every 1,000,000 prints ^{*1}
 - : Every 750,000 prints ^{*2}

^{*1} 1250/1250P/1052

^{*2} 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. After once sliding the paper dust removing lever [1] to the arrow-marked direction [2], pull out and remove the paper dust removing brush [3] for the registration roller /Lw.
(The picture shows the lever that has been pulled out a little.)

Note

- When reinstalling the paper dust removing brush for the registration roller /Lw, be sure to insert it fully until it hits against the back. When the paper dust removing brush for the registration roller /Lw is not inserted fully, it blocks the light path of detection of the registration sensor (PS40), thus resulting in a jam.

3. Clean the cleaning section [2] of the paper dust removing brush [1] for the registration roller /Lw with the blower brush.
4. Reinstall the above parts following the removal steps in reverse.

5.9.3 Cleaning of the paper dust removing brush for the registration roller /Up**(1) Periodic cleaning cycle**

- Paper dust removing brush for the registration roller /Up
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

[1]

a0g6t3c091ca

[1]

[2]

fs503fs2134c

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Press the sides of the paper dust removing brush [1] and remove 2 paper dust removing brushes /1 [2] and /2 [3] provided for the registration roller /Up.

3. Clean each of 2 cleaning sections [2] of the paper dust removing brush [1] for the registration roller /Up.
4. Reinstall the above parts following the removal steps in reverse.

5.9.4 Cleaning of the registration sensor**(1) Periodic cleaning cycle**

- Registration sensor
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove 2 screws [1] and release the fixing of the sensor mounting piece [2].

3. Turn over the sensor mounting piece [1] and clean the registration sensor (PS40) [2] with the blower brush.
4. Reinstall the above parts following the removal steps in reverse.

5.9.5 Cleaning the paper stay sensor /1**(1) Periodically cleaned parts/cycle**

- Paper stay sensor /1 (PS64)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
2. Clean the paper stay sensor/1 (PS64) [1] with the blower brush.
3. Reinstall the above parts following the removal steps in reverse.

5.9.6 Cleaning the paper stay sensor /2**(1) Periodically cleaned parts/cycle**

- Paper stay sensor /2 (PS63)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Open the cover [1], and then clean the paper stay sensor /2 (PS63) [2] with the blower brush.

5.9.7 Cleaning the ADU paper reverse sensors /2**(1) Periodically cleaned parts/cycle**

- ADU reverse sensor /2 (PS45)
 - : Every 1,000,000 prints *¹
 - : Every 750,000 prints *²

*¹ 1250/1250P/1052*² 951**(2) Procedure**

1. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
2. Remove the transfer belt cleaning unit. (Refer to [F.5.9.17 Replacing the belt cleaning unit](#))
3. Clean the ADU reverse sensor /2 (PS45) [1] with the blower brush.
4. Reinstall the above parts following the removal steps in reverse.

5.9.8 Removing/reinstalling the transfer belt unit**(1) Procedure**

a0g6t3c096ca

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fastener [1].
3. Hold the portions marked with [2] and [3] and slant the transfer belt by 45° [5], and pull it out [6].
4. Reinstall the above parts following the removal steps in reverse.

5.9.9 Replacing the transfer belt, the transfer roller, the bearing /H and the transfer contact /Rr**(1) Periodically replaced parts/cycle**

- Transfer belt
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2
- Transfer roller
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2
- Bearing /H
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2
- Transfer contact /Rr
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
2. Release the lock lever [1] and fold the transfer belt unit [2].

3. Pull out the transfer belt [2] from the transfer belt unit [1].

Note

- Be careful not to touch the surface of the transfer belt.
- Clean the surface of the transfer belt with the cleaning pad. Do not use alcohol.
- When reinstalling the transfer belt, turn the notation of the model number [3] described inside to the jam release lever [4] side.
- After reinstalling the transfer belt, be sure to rotate the gear [5] to see if there is no mis-centering.

4. Remove 2 screws [1] and remove the transfer roller support assy /Rr [2].
5. Release the bearing support member [3] of the transfer roller support assy /Rr, and remove the bearing /H [4].

Note

- When removing the transfer roller support assy /Rr, the spring installed inside [5] and the releasing member [6] drop off at the same time. When reinstalling the transfer roller support assy /Rr, be sure to build them in the transfer roller support assy /Rr.

6. Remove the transfer roller [1].
7. Release the bearing support member [3] of the transfer roller support assy /Fr [2], and remove the bearing /H [4].

Note

- Be careful not to lose the bearings [8] and [9] installed in the transfer belt driven roller [5] and the nip roller [6] and [7].
- Be sure to locate the shaft with the groove [10] of the transfer roller on the transfer roller support assy /Rr side (the rear side).

8. Release the springs [2], 1 each, of transfer roller support assy /Rr [1], and then remove 2 transfer contact /Rr [3].
9. Reinstall the preceding parts following the removal steps in reverse.
10. After replacing the transfer belt, the transfer roller, the bearing /H and the transfer contact /Rr, conduct the following steps.
For the transfer belt: Counter reset of the parts counter No.20
For the transfer roller: Counter reset of the parts counter No.21
For the bearing /H: Counter reset of the parts counter No.23
For the transfer contact /Rr: Counter reset of the parts counter No. 24

5.9.10 Replacing the transfer contact /Fr**(1) Periodically replaced parts/cycle**

- Transfer contact /Fr
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
2. Remove the transfer belt. (Refer to [F.5.9.9 Replacing the transfer belt, the transfer roller, the bearing /H and the transfer contact /Rr](#))
3. Release the lock springs /Fr [1] and /Rr [2].
4. Remove the E-ring [3] and remove the release cam [4].
5. Remove the pin [5] and the lock spring /Rr [2].
6. Remove the E-ring [6].
7. Pull out the release lock lever assy [7].

8. Remove 2 screws [1] and remove the drive shaft support member assy [2].

9. Remove the screw [1] and remove the transfer contact /Fr [2].
10. Reinstall the preceding parts following the removal steps in reverse.
11. After replacing the transfer contact /Fr, conduct the following steps.
For the transfer contact /Fr: Counter reset of the parts counter No. 25

5.9.11 Removing/reinstalling the duplex section cover**(1) Procedure**

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Open the jam release lever [1].
3. Remove the screw [2], and pull out the duplex section pull out lever [3].
4. Loosen 3 screws [4] and remove the duplex section cover /Lt [5].
5. Loosen 2 screws [6] and remove the duplex section cover /Rt [7].
6. Reinstall the above parts following the removal steps in reverse.

5.9.12 Removing/reinstalling the registration section**(1) Procedure**

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the duplex section cover /Lt and /Rt. (Refer to [F.5.9.11 Removing/reinstalling the duplex section cover](#))
3. Remove 2 screws [1] and then remove the multi feed sensor cover [2] while removing the wire harness from the cord clamp.

4. Disconnect 6 connectors [1].

Note

- The 3 connectors [2] are only for 1250/1250P/1052.

5. Remove 4 screws [1].
6. Open the pre-transfer jam handler [2] and remove the screw [3].
7. Remove the C-clip [4] and slide the washer [5] and the bearing [6].
8. Remove the registration unit [7].
9. Reinstall the preceding parts following the removal steps in reverse.

5.9.13 Replacing the registration roller /Up, the registration bearing, the roller gear /Rt, the registration gears /Up and /Lw

(1) Periodically replaced parts/cycle

- Registration roller /Up
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Registration bearing
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Roller gear /Rt
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Registration gear /Up
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Registration gear /Lw
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the paper dust removing brush for the registration roller / Lw. (Refer to [F.5.9.2 Cleaning of the paper dust removing brush for the registration roller /Lw](#))
3. Remove the paper dust removing brush for the registration roller / Up. (Refer to [F.5.9.3 Cleaning of the paper dust removing brush for the registration roller /Up](#))
4. Remove the registration section. (Refer to [F.5.9.12 Removing/ reinstalling the registration section](#))
5. Remove the screw [1] and then remove the knob [2].
6. Remove the washer [3] and the bearing [4].
7. Remove 2 screws [5] and remove the roller gear /Rt [6].

8. Remove 2 springs [1].
9. Remove 2 E-rings [2] and remove the registration gear /Lw [3].

Note

- There is a pin inside the registration gear /Lw. Be careful not to lose it.

**Note**

- When reinstalling the spring, be sure to set the notch to the holes [1] and [2].

10. Remove the E-ring [1] and remove the registration bearing [2].
 11. Remove the E-ring [3] and remove the registration gear /Up [4] and the pin [5].
 12. Remove the E-ring [6] and then remove the registration bearing [7].
 13. Open the pre-transfer jam handler [8] and move and remove the registration roller /Up [9] in the arrow-marked directions [10] and [11] in this order.
 14. Reinstall the preceding parts following the removal steps in reverse.
 15. After replacing the registration roller /Up, the registration bearing, the roller gear /Rt, and the registration gears /Up and /Lw, conduct the following items.
 - For 1250/1250P/1052
 - For the registration roller /Up: Counter reset of the parts counter number 107
 - For the registration bearing: Counter reset of the parts counter number 107
 - For the roller gear /Rt: Counter reset of the parts counter number 109
 - For the registration gears /Up and /Lw: Counter reset of the parts counter number 108
 - For 951
 - For the registration roller /Up: Counter reset of the parts counter number 87
 - For the registration bearing: Counter reset of the parts counter number 87
 - For the roller gear /Rt: Counter reset of the parts counter number 89
 - For the registration gears /Up and /Lw: Counter reset of the parts counter number 88
- Regist line speed adjustment
(Refer to [I.5.3.6 Registration Line Speed Adj. \(Magnification Adjustment\)](#))
- Printer FD-Mag. Adjustment (Side1)
(Refer to [I.5.3.7 Printer FD-Mag. Adj. \(Side1\) \(Magnification Adjustment\)](#))
 - Printer Restart Timing Adjustment (Side1)
(Refer to [I.5.3.13 Printer Restart Timing Adjustment \(Side1\) \(Timing Adjustment\)](#))

5.9.14 Replacing of the paper lift sheet

(1) Periodically replaced parts/cycle

- Paper lift sheet
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
2. Remove the registration roller /Up. (Refer to [F.5.9.13 Replacing the registration roller /Up, the registration bearing, the roller gear /Rt, the registration gears /Up and /Lw](#))
3. Remove 2 screws [1] and remove the pre-transfer jam handler [2].

Note

- Be sure not to remove the wiring harness [3].

4. Remove 2 screws [1], and remove the registration entering assy [2] and registration spacer [3].

5. Peel off the paper lift sheet [1].

Note

- When reinstalling the paper lift sheet, be sure to paste the sheet based on [2] and [3] of the registration section.

6. Reinstall the above parts following the removal steps in reverse.

5.9.15 Replacing the pre-transfer driven roller assy**(1) Periodically replaced parts/cycle**

- Pre-transfer driven roller assy
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
2. Remove the screw [1] and remove the wiring plate [2].
3. Remove 2 screws [3] and remove the pre-transfer driven roller section [4].

4. Remove 2 bearings [1] and remove 2 pre-transfer driven roller assys [2].
5. Reinstall the preceding parts following the removal steps in reverse.

5.9.16 Replacing the loop driven roller

(1) Periodically replaced parts/cycle

- Loop driven roller
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
2. Release the loop driven roller assy [1] from the spring [2], and pull it out to the arrow-marked direction [3]

3. Remove the bearing [1] and the E-ring [2], and remove the loop driven roller [3].
4. Reinstall the above parts following the removal steps in reverse.

5.9.17 Replacing the belt cleaning unit

(1) Periodically replaced parts/cycle

- Belt cleaning unit
 - : Every 16,000,000 prints *1
 - : Every 12,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
4. Remove the duplex section cover /Lt and /Rt. (Refer to [F.5.9.11 Removing/reinstalling the duplex section cover](#))
5. Remove 2 fastons [1].
6. Remove the duct cover [2].
7. Remove 4 screws [3] and remove the belt cleaning unit [4].

Note

- Be sure not to touch the screw [5] because it is not allowed to be removed.

8. Reinstall the preceding parts following the removal steps in reverse.

Note

- When loosening or removing the screw not allowed to be removed, be sure to reinstall it by following "C. Installation adjustment". (Refer to [F.5.9.17.\(3\) Installation adjustment](#))

9. After replacing the belt cleaning unit, conduct the following steps.
For the belt cleaning unit: Counter reset of the parts counter No.28

(3) Installation adjustment

1. Remove each 1 of the screws [1] and remove the transfer belt mounting jigs /Fr [2] and /Rr [3].

Note

- When reinstalling the transfer belt mounting jigs /Fr and /Rr, be sure to align the projections [5] of the main body to the positioning holes [4].

a0g6t3c355ca

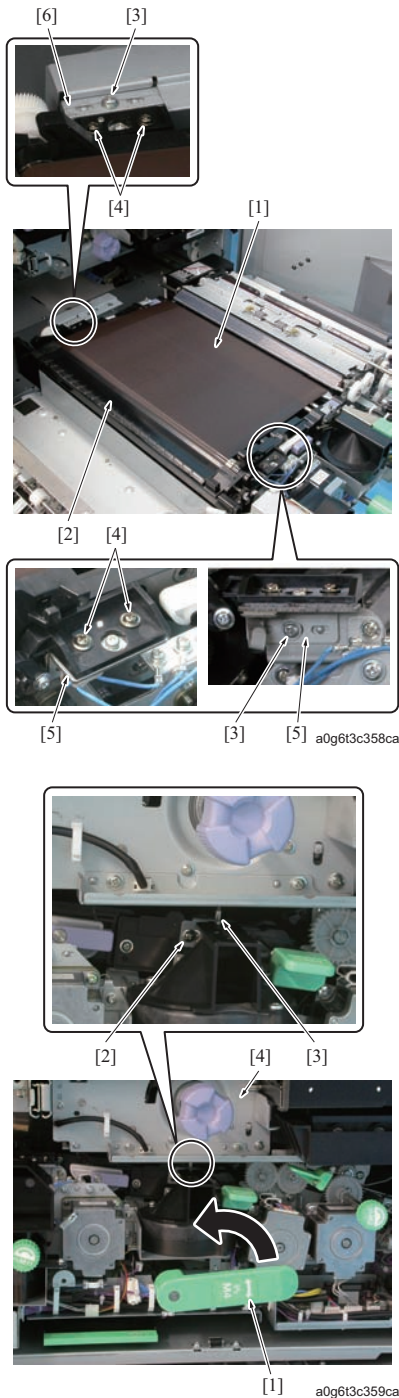

2. Install the transfer belt mounting jigs /Fr [2] and /Rr [3] to the transfer belt unit [4] with each 1 of the screws [1].

Note

- When reinstalling the transfer belt mounting jigs /Fr and /Rr, be sure to align the projections [6] of the transfer belt unit to the positioning holes [5].

3. Rotate the cam [2] of the transfer pressure unit [2] to make it to the position of pressure 1 [3].

4. Set the transfer belt unit [1] to the belt cleaning unit [2].
5. Loosen 2 screws which are not allowed to be removed [3].
6. Fix the belt cleaning unit [2] to the belt cleaning unit mounting brackets /Fr [5] and /Rr [6] with each 2 of the screws [4].

Note

- Be sure to loosen 2 screws which are not allowed to be removed [3].

7. Set the duplex section to the main body and bring up the lever [1] that pulls out the duplex section.
8. Check that the pin [3] of the transfer belt mounting jig /Fr [2] is set to the photo conductor section [4].
9. Release the lock and bring down the pull out lever, and then pull out the duplex section gently. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))

Note

- Be sure to repeat steps 7 and 9 again when the position of the transfer belt unit is out of alignment in pulling out the duplex section.

10. Fix the belt cleaning unit mounting brackets /Fr and /Rr with each 1 of the screws which are not allowed to be removed.
11. Be sure that the following reinstallation of the parts follows the removal steps in reverse.

5.9.18 Replacing the cleaning brush, the cleaning shaft, the regulation plate assy and the power supply parts

(1) Periodically replaced parts/cycle

- Cleaning brush
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2
- Cleaning shaft
 - : Every 8,000,000 prints *1
 - : Every 6,000,000 prints *2
- Regulation plate assy
 - : Every 2,000,000 prints *1
 - : Every 1,500,000 prints *2
- Power supply parts
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the belt cleaning unit. (Refer to [F.5.9.17 Replacing the belt cleaning unit](#))
2. Push the bottom of the cooling duct [1] to release 3 claws [2], and remove the cooling duct assy [3].

3. Remove 3 screws [1] and remove the separation cover assy [2].

**Note**

- When reinstalling the separation cover assy, make sure that the pin [3] gets in securely up to 2 holes [2] of the reinforcing plate [1].

4. Remove the screws [1], 1 each, and remove the scatter preventive blocks /Fr [2] and /Rr [3].

5. Rotate the gear [1] in the arrow-marked direction [2] to turn the notch of the E-ring [3] to the gear [4] side.

Note

- Be sure to rotate the gear [1] in the arrow-marked direction [2] at all times.
- When removing the gear [4], the E-ring [3] contacts it. be sure to turn the notch of the E-ring to the gear [4] side.

6. Remove 2 retaining rings [5], and remove the gears [4] and [6].
7. Remove 2 retaining rings [7].

8. Remove 2 screws [1] and remove the fixing cover [2].
9. Remove the screw [3] and remove the fixing member [4].
10. Remove 2 cleaning brush assy [5].

11. Remove the E-ring [2] and the bearing [3] from each cleaning brush assy [1].

12. Rotate the gear [1] in the arrow-marked direction [2] to turn the notch of the E-ring [3] to the gear [4] side.

Note

- Be sure to rotate the gear [1] in the arrow-marked direction [2] at all times.
- When removing the gear [4], the E-ring [3] contacts it. be sure to turn the notch of the E-ring to the gear [4] side.

13. Remove 2 E-rings [5] and remove the gears [4], [6], [7] and [8].

14. Remove the screw [1] and remove the power supply cover [2].
 15. Remove 2 screws [3], and remove the power supply blocks /Up [4] and /Lw [5].
 16. Remove 2 E-rings [6] and remove 2 bearings [7].
 17. Remove 2 E-rings [8] and 2 bearings [9], and remove 2 cleaning shafts [10].

18. Remove the screws [1], 1 each, and then remove 2 power supply parts [2].

19. Remove the screws [1], 2 each, and remove 2 regulation plate assy [2].
20. Reinstall the preceding parts following the removal steps in reverse.
21. After replacing the cleaning brush, the cleaning shaft, the regulation plate assy and the power feeding members, conduct the following steps.
 For the cleaning brush: Counter reset of the parts counter No.22
 For the cleaning shaft: Counter reset of the parts counter No.27
 For the registration plate assy: Counter reset of the parts counter No.19
 For the power supply parts: Counter reset of the parts counter No. 26

5.9.19 Replacing the registration motor (M17) and the motor gear /Rt

(1) Periodically replaced parts/cycle

- Registration motor (M17)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Motor gear /Rt
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the C-clip [1] and slide the washer [2] and the bearing [3].

2. Disconnect the connector [1].
3. Remove 3 screws [2] and then remove the registration motor assembly [3].

Note

- When reinstalling the registration motor assy [3], tighten 3 screws [2] temporary and set the bearing, the washer and the C-clip which have been moved in step 2. Then, tighten the 3 screws [2] securely.

4. Disconnect the connector [1].
5. Remove 2 screws [2] and remove the motor gear /Rt [3].

6. Remove 4 screws [1] and then remove the registration motor (M17) [2].
7. Reinstall the preceding parts following the removal steps in reverse.

5.9.20 Replacing the loop motor (M18)**(1) Periodically replaced parts/cycle**

- Loop motor (M18)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
2. Disconnect the connector [1].
3. Remove 2 screws [2] and then remove the registration cooling fan (FM17) [3].

4. Remove 2 screws [1] and remove the fan mounting bracket [2].

5. Disconnect the connector [1].
6. Remove 4 screws [2] and then remove the loop motor assembly [3].

7. Remove 2 screws [1] and then remove the gear [2].
8. Remove 4 screws [3] and remove the motor mounting bracket [4].

9. Remove screws [2] from the loop motor (M18) [1].
10. Reinstall the preceding parts following the removal steps in reverse.

5.9.21 Replacing the ADU exit roller**(1) Periodically replaced parts/cycle**

- ADU exit roller
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*¹
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*²

*¹ 1250/1250P/1052*² 951**(2) Procedure**

a0g6t3c138ca

a0g6t3c139ca

a0g6t3c140ca

1. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
2. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
3. Remove 2 screws [1] and then remove the gear [2].

4. Remove 2 screws [1] to release the fixing of the bearing [2].
5. Pull out the ADU exit roller [3].

Note

- When reinstalling the bearing, be sure to set the notch of the flange between 2 screws.
- To prevent the notch from opening, be sure to tighten 2 screws in the counterclockwise turn with the notch as a starting point.

6. Remove 2 E-rings [2] and the bearing [3] from the ADU exit roller [1].
7. Reinstall the preceding parts following the removal steps in reverse.
8. After replacing the ADU exit roller, conduct the following steps.
In case of 1250/1250P/1052
For the ADU exit roller: Counter reset of the parts counter No.114
For 951
For the ADU exit roller: Counter reset of the parts counter No.94

5.9.22 Replacing the ADU reverse motor (M12) and the ADU reverse motor belt**(1) Periodically replaced parts/cycle**

- ADU reverse motor (M12)
 - : Every 40,000,000 prints*¹
 - : Every 30,000,000 prints*²
- ADU reverse motor belt
 - : Every 40,000,000 prints*¹
 - : Every 30,000,000 prints*²

*¹ 1250/1250P/1052

* 2 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Remove the registration motor Assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
5. Remove the loop motor Assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
6. Disconnect the connector [1].
7. Remove 3 screws [2] and remove the belt cooling fan Assy [3].

8. Remove 2 fasteners [1] and the duct cover [2].

9. Disconnect the connector [1].
10. Remove 3 screws [2] and remove the fan mounting piece [3].

a0g6t3c144ca

a0g6t3c145ca

a0g6t3c146ca

11. Disconnect the connector [1].
12. Loosen 3 screws [2] to slide the ADU reverse motor (M12) [3] in the arrow-marked direction [4], and release ADU reverse motor belt [6] from the pulley [5].
13. Remove 3 screws [7] and then remove the ADU reverse motor assembly [8].

Note

- Be sure not to touch the screw [9] because it is not allowed to be removed.
- When reinstalling the ADU reverse motor belt [6], the tension is automatically adjusted by the spring [10]. be sure to tighten the screw [2] after installing the ADU reverse motor belt.

14. Remove the ADU reverse motor belt [1].

15. Disconnect the connector [1].
16. Remove 2 springs [2].

17. Remove 3 screws [1] and remove the motor mounting plate [2].

18. Remove the E-ring [1].

19. Remove 2 screws [2] and remove the pulley [3].

20. Remove 4 screws [4], and remove the motor slide plate [6] from the ADU reverse motor (M12) [5].

21. Reinstall the above parts following the removal steps in reverse.

5.9.23 Replacing the ADU conveyance motor /2 (M16) and the ADU conveyance motor belt /2

(1) Periodically replaced parts/cycle

- ADU conveyance motor /2 (M16)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Removing/installing of the ADU conveyance motor belt /2
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

a0g6t3c150ca

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Remove the registration motor Assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
5. Remove the loop motor Assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
6. Remove the ADU reverse motor Assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
7. Disconnect the connector [1].
8. Remove 18 connectors [3] that are connected to the ADU drive board /1 (ADUDB1) [2].

Note

- The 2 connectors [4] are only for 1250/1250P/1052.

9. Disconnect the connector [1].
10. Remove 3 screws [2] and remove the ADU drive board stay /1 [2].

11. Disconnect 4 connectors [1].
12. Remove 5 connectors [3] that are connected to the ADU drive board /2 (ADUDB2) [2].

13. Disconnect the 3 connectors [1].
14. Remove the screw [2] and remove the connector mounting bracket [3].

Note

- When reinstalling the connector mounting piece, be sure to set 2 positioning holes [4] to 2 projections [5] of the duplex section.

15. Remove 4 screws [1] and remove the wiring harness stay [2].

Note

- When reinstalling the wiring harness stay, be sure to set the positioning hole [3] to the projection of the duplex section [4].

16. Remove 2 screws [1] and remove the ADU drive board stay /2 [2].

17. Remove 2 screws [1] and then remove the ADU lock solenoid assembly [2].

Note

- When reinstalling the thick paper assist solenoid assy, be sure to set the projection [4] of the duplex section to the positioning hole [3].

18. Remove 3 screws [1] and remove the ADU conveyance motor /2 assy [2].

19. Remove the ADU conveyance motor belt /2 [3].

Note

- When reinstalling the ADU conveyance motor /2 assy, be sure to set 2 positioning holes [4] to 2 projections [5] of the duplex section.

20. Disconnect the connector [1].
21. Remove the E-ring [2] and 2 screws [3], and remove the pulley [4].

22. Remove 4 screws [1] and remove the ADU conveyance motor /2 (M16) [2].
23. Reinstall the preceding parts following the removal steps in reverse.

5.9.24 Replacing the ADU conveyance roller /3 and /4

(1) Periodically replaced parts/cycle

- ADU conveyance roller /3
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*¹
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*²
- ADU conveyance roller /4
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*¹
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*²

*¹ 1250/1250P/1052

*² 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
5. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
6. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
7. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
8. Remove the screws [1], 2 each, and remove 2 pulleys [2] and 2 spacers [3].

9. Remove 2 screws [1] to release the fixing of 2 bearings [2].
10. Pull out the ADU conveyance rollers /3 [3] and /4 [4].

Note

- When reinstalling the bearing, be sure to set the notch of the flange between 2 screws.
- To prevent the notch from opening, be sure to tighten 2 screws in the counterclockwise turn with the notch as a starting point.

11. Remove E-rings [3], 2 each, and the bearings [4], 1 each, from the ADU conveyance rollers /3 [1] and /4 [2].

Note

- When reinstalling the bearing, be sure to turn the flange outside.

12. Reinstall the preceding parts following the removal steps in reverse.
13. After replacing the ADU conveyance roller /3 and /4, conduct the following item.

In case of 1250/1250P/1052

For the ADU conveyance rollers /3 and /4: Counter reset of the parts counter No.114

For 951

For the ADU conveyance rollers /3 and /4: Counter reset of the parts counter No.94

5.9.25 Replacing the reverse/exit roller and the reverse/exit motor belt

(1) Periodically replaced parts/cycle

- Reversal output roller
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *2
- reverse/exit motor belt
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
5. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
6. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
7. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
8. Loosen 3 screws [1] to slide the reverse/exit motor (M13) [2] in the arrow-marked direction [3], and release the reverse/exit motor belt [5] from the pulley [4].

Note

- When reinstalling the reverse/exit motor belt [5], the tension is automatically adjusted by the spring [6]. be sure to tighten the screw [1] after installing the reverse/exit motor belt.

9. Remove 2 screws [1] and remove the pulley [2].

10. Remove the spacer [1].

11. Remove 2 screws [2] to release the fixing of the bearing [3].

12. Pull out the reverse/exit roller [4].

Note

- When reinstalling the bearing, be sure to set the notch of the flange between 2 screws.
- To prevent the notch from opening, be sure to tighten 2 screws in the counterclockwise turn with the notch as a starting point.

13. Remove 3 E-rings [2] and the bearing [3] from the reverse/exit roller [1].

Note

- When reinstalling the bearing, be sure to turn the flange outside.

14. Reinstall the preceding parts following the removal steps in reverse.

15. After replacing the reverse/exit roller, conduct the followings.

In case of 1250/1250P/1052

For the reverse/exit roller: Counter reset of the parts counter No. 111

For 951

For the reverse/exit roller: Counter reset of the parts counter No.91

5.9.26 Replacing the ADU accelerate motor (M14) and the ADU accelerate motor belt

(1) Periodically replaced parts/cycle

- ADU acceleration motor
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- ADU accelerate motor belt
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Remove the registration motor Assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
5. Remove the loop motor Assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
6. Remove the ADU reverse motor Assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
7. Remove the ADU conveyance motor /2 Assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
8. Disconnect the connector [1].
9. Remove 4 screws [2] and then remove the ADU acceleration motor assembly [3].
10. Remove the ADU accelerate motor belt [4].

Note

- When reinstalling the ADU accelerate motor Assy, be sure to set 2 positioning holes [5] to 2 projections [6] of the duplex section.

11. Disconnect the connector [1].
12. Remove the E-ring [2] and 2 screws [3], and remove the pulley [4].
13. Remove 4 screws [5] and remove the ADU accelerate motor (M14) [6].
14. Reinstall the above parts following the removal steps in reverse.

5.9.27 Replacing the ADU accelerate roller**(1) Periodically replaced parts/cycle**

- ADU accelerator roller
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
5. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
6. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
7. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
8. Remove the ADU accelerate motor assy. (Refer to [F.5.9.26 Replacing the ADU accelerate motor \(M14\) and the ADU accelerate motor belt](#))
9. Remove 2 screws [1] and remove the pulley [2] and the spacer [3].
10. Remove 2 screws [1] to release the fixing of the bearing [2].
11. Pull out the ADU accelerate roller [3].

Note

- When reinstalling the bearing, be sure to set the notch of the flange between 2 screws.
- To prevent the notch from opening, be sure to tighten 2 screws in the counterclockwise turn with the notch as a starting point.

12. Remove 2 E-rings [2] and the bearing [3] from the ADU accelerate roller [1].

Note

- When reinstalling the bearing, be sure to turn the flange outside.

13. Reinstall the preceding parts following the removal steps in reverse.
14. After replacing the ADU accelerate roller, conduct the following steps.
In case of 1250/1250P/1052
For the ADU accelerate roller: Counter reset of the parts counter No.110
For 951
For the ADU accelerate roller: Counter reset of the parts counter No.90

5.9.28 Replacing the paper exit conveyance roller /1 and /2 assy and the ADU paper exit roller belt**(1) Periodically replaced parts/cycle**

- Paper exit conveyance roller /1
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *2
- Output convey roller /2 assy
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *2
- ADU paper exit roller belt
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

a0g6t3c171ca

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
5. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
6. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
7. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
8. Remove the ADU accelerate motor assy. (Refer to [F.5.9.26 Replacing the ADU accelerate motor \(M14\) and the ADU accelerate motor belt](#))
9. Remove the E-ring [1] and then remove the spacer [2].
10. Remove the ADU paper exit roller belt [3].
11. Remove the pulley [4] and remove the pin [5].
12. Remove 2 screws [6] to release the fixing of the bearing [7].
13. Pull out the ADU paper exit conveyance roller /2 assy [8].
14. Following the steps 9 to 13, remove the paper exit conveyance roller /1 [9].

Note

- When reinstalling the bearing, be sure to set the notch of the flange between 2 screws.
- To prevent the notch from opening, be sure to tighten 2 screws in the counterclockwise turn with the notch as a starting point.

15. Remove 2 E-rings [2] and the bearing [3] from the paper exit roller /2 assy [1].

Note

- When reinstalling the bearing, be sure to turn the flange outside.

a0g6t3c172ca

16. Remove the bearing [2] and the E-ring [3] from the paper exit conveyance roller /1 [1].

Note

- When reinstalling the bearing, be sure to turn the flange outside.

17. Reinstall the preceding parts following the removal steps in reverse.
18. After replacing the paper exit conveyance roller /1 and the paper exit conveyance roller /2 assy, conduct the followings.
- In case of 1250/1250P/1052
For the paper exit conveyance roller /1 and the paper exit conveyance roller /2 assy: Counter reset of the parts counter No. 113
- For 951
For the paper exit conveyance roller /1 and the paper exit conveyance roller /2 assy: Counter reset of the parts counter No. 93

5.9.29 Replacing the ADU reverse roller

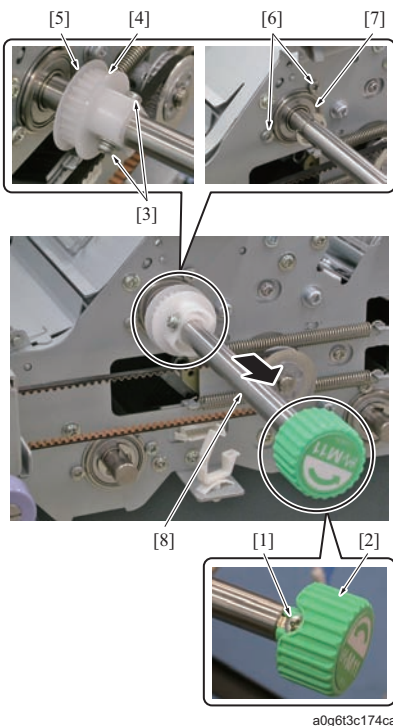

(1) Periodically replaced parts/cycle

- ADU reversal roller
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
5. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
6. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
7. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
8. Remove the ADU accelerate motor assy. (Refer to [F.5.9.26 Replacing the ADU accelerate motor \(M14\) and the ADU accelerate motor belt](#))
9. Remove the screw [1] and then remove the knob [2].
10. Remove 2 screws [3] and remove the pulley [4] and the spacer [5].
11. Remove 2 screws [6] to release the fixing of the bearing [7].
12. Pull out the ADU reverse roller [8].

Note

- When reinstalling the bearing, be sure to set the notch of the flange between 2 screws.
- To prevent the notch from opening, be sure to tighten 2 screws in the counterclockwise turn with the notch as a starting point.

13. Remove 2 E-rings [2] and the bearing [3] from the ADU reverse roller [1].

Note

- When reinstalling the bearing, be sure to turn the flange outside.

14. Reinstall the preceding parts following the removal steps in reverse.
15. After replacing the ADU reversal roller, conduct the following item.
In case of 1250/1250P/1052
For the ADU reverse roller: Counter reset of the parts counter No. 112
For 951
For the ADU reverse roller: Counter reset of the parts counter No. 92

5.9.30 Replacing the transfer belt motor (M30)**(1) Periodically replaced parts/cycle**

- Transfer belt motor (M30)
 - : Every 40,000,000 prints*¹
 - : Every 30,000,000 prints*²

*¹ 1250/1250P/1052*² 951**(2) Procedure**

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the belt cleaning unit. (Refer to [F.5.9.17 Replacing the belt cleaning unit](#))
4. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
5. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
6. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
7. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
8. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
9. Remove the ADU accelerate motor assy. (Refer to [F.5.9.26 Replacing the ADU accelerate motor \(M14\) and the ADU accelerate motor belt](#))
10. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
11. Disconnect the connector [1].
12. Remove 4 screws [2] and remove the transfer belt motor (M30) [3].

Note

- The position of the transfer belt motor is adjusted as an assy. Be sure to replace directly the motor by itself when replacing one.

13. Reinstall the above parts following the removal steps in reverse.

5.9.31 Replacing the ADU conveyance motor /1 (M15) and the ADU conveyance motor belt /1**(1) Periodically replaced parts/cycle**

- ADU conveyance motor /1 (M15)
 - : Every 40,000,000 prints*¹
 - : Every 30,000,000 prints*²
- ADU conveyance motor /1 belt

- : Every 40,000,000 prints*1
- : Every 30,000,000 prints*2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
 2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
 3. Remove the belt cleaning unit. (Refer to [F.5.9.17 Replacing the belt cleaning unit](#))
 4. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
 5. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
 6. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
 7. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
 8. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
 9. Remove the ADU accelerate motor assy. (Refer to [F.5.9.26 Replacing the ADU accelerate motor \(M14\) and the ADU accelerate motor belt](#))
 10. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
 11. Disconnect the connector [1].
 12. Remove the screw [2] and then remove the 2 wiring harness clamp [3].
 13. Remove the E-ring [4] and remove the spacer [5].
 14. Remove the ADU conveyance motor /1 belt [7] from the pulley [6].
 15. Remove 4 screws [8] and remove the ADU conveyance motor /1 assy [9].
 16. Remove the ADU conveyance motor belt /1 [7] from 2 pulleys [10].
- Note**
- Some of the screws [8] is hidden by the wiring harness. remove the wiring harness clamps [3] to move the wiring harness.
 - When reinstalling the ADU conveyance motor /1 assy, be sure to set 2 positioning holes [11] to 2 projections [12] of the duplex section.
17. Remove the E-ring [1] and 2 screws [2], and remove the pulley [3].
 18. Remove 3 screws [4] and remove the ADU conveyance motor /1 (M15) [5].
 19. Reinstall the above parts following the removal steps in reverse.

5.9.32 Replacing the ADU conveyance roller /1 and /2**(1) Periodically replaced parts/cycle**

- ADU conveyance roller /1
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*2
- ADU conveyance roller /2
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*2

*1 1250/1250P/1052

*2 951

(2) Procedure

a0g6t3c179ca

a0g6t3c180ca

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the belt cleaning unit. (Refer to [F.5.9.17 Replacing the belt cleaning unit](#))
4. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
5. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
6. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
7. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
8. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
9. Remove the ADU accelerate motor assy. (Refer to [F.5.9.26 Replacing the ADU accelerate motor \(M14\) and the ADU accelerate motor belt](#))
10. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
11. Remove the ADU conveyance motor /1 assy. (Refer to [F.5.9.31 Replacing the ADU conveyance motor /1 \(M15\) and the ADU conveyance motor belt /1](#))
12. Remove the E-ring [1] and then remove the spacer [2].
13. Remove the pulleys [3], 1 each, and remove the pins [4], 1 each.
14. Set the duplex section temporarily to the main body. (Refer to [G.2.2.22 DUPLEX SECTION](#))

Note

- When the duplex section is on the working table, the ADU conveyance rollers /1 and /2 contact closely with driven roller of each roller and cannot be removed. Be sure to return the duplex section to the main body in advance.

15. Remove the screws [1], 2 each, to release the fixing of the bearings [2], 1 each.
16. Pull out the ADU conveyance rollers /1 [3] and /2 [4].

Note

- When reinstalling the bearings [2], be sure to set the notch to the position [5].
- To prevent the notch [5] from opening, be sure to tighten 2 screws [1] in the counterclockwise turn with the notch [5] as a starting point.

17. Remove 3 E-rings [3] and the bearings [4] and [5] from the ADU conveyance rollers /1 [1] and /2 [2].

Note

- When reinstalling the bearing [4], be sure to turn the flange outside.

18. Reinstall the preceding parts following the removal steps in reverse.
19. After replacing the ADU conveyance rollers /1 and /2 conduct the following item.
- In case of 1250/1250P/1052
For the ADU conveyance rollers /1 and /2: Counter reset of the parts counter No.114
For 951
For the ADU conveyance rollers /1 and /2: Counter reset of the parts counter No.94

5.9.33 Replacing the transfer belt pressure release motor (M26)**(1) Periodically replaced parts/cycle**

- Transfer belt pressure release motor (M26)
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the belt cleaning unit. (Refer to [F.5.9.17 Replacing the belt cleaning unit](#))
4. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
5. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
6. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
7. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
8. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
9. Remove the ADU accelerate motor assy. (Refer to [F.5.9.26 Replacing the ADU accelerate motor \(M14\) and the ADU accelerate motor belt](#))
10. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
11. Remove 2 screws [1], and remove 2 ground terminals [2].
12. Disconnect 6 connectors [2] and remove 3 fastons [3].
13. Remove 3 screws [4] and remove the high voltage unit /2 (HV2) [5].

14. Remove 2 screws [1] and remove the transfer pressure unit [2].

15. Open the pressure arm [1].

16. Remove 6 screws [2] and remove the cover [3].

Note

- When reinstalling the cover, be sure to set 4 positioning holes [4] to 4 projections [5] of the transfer pressure unit.

17. Remove 2 screws [1], and then remove the sensor mounting bracket [2].

Note

- Do not remove the cables of each sensor.

18. Remove the screw [3] and remove the spring [4].

19. Remove 2 screws [5] and 9 screws [6], and remove the pressure mechanism assy [7].

Note

- When reinstalling the sensor mounting bracket [2] and the pressure mechanism assy [7], be sure to set the positioning holes [8] to the projections [9] of transfer pressure unit.

20. Remove the E-ring [1] and remove the pressure cam [2] and the pin [3].

21. Remove the E-ring [4] and slide the cam drive shaft [5] in the arrow-marked direction [6].

22. Remove the slide member [7].

Note

- When reinstalling the slide member [7], be sure to engage the depression [8] to the pin [10] of the pressure shaft [9].

23. Remove the E-ring [1] and the gear [2].

24. Remove 4 screws [1] and remove the transfer belt pressure release motor assy [2].

25. Disconnect the connector [2] from the transfer belt pressure release motor (M26) [1].

26. Remove the E-ring [3] and remove the gear [4].

27. Reinstall the above parts following the removal steps in reverse.

5.9.34 Replacing the reverse/exit motor (M13)

(1) Periodically replaced parts/cycle

- Reverse/exit motor (M13)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the belt cleaning unit. (Refer to [F.5.9.17 Replacing the belt cleaning unit](#))
4. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
5. Remove the registration motor assy. (Refer to [F.5.9.19 Replacing the registration motor \(M17\) and the motor gear /Rt](#))
6. Remove the loop motor assy. (Refer to [F.5.9.20 Replacing the loop motor \(M18\)](#))
7. Remove the ADU reverse motor assy. (Refer to [F.5.9.22 Replacing the ADU reverse motor \(M12\) and the ADU reverse motor belt](#))
8. Remove the ADU conveyance motor /2 assy. (Refer to [F.5.9.23 Replacing the ADU conveyance motor /2 \(M16\) and the ADU conveyance motor belt /2](#))
9. Remove the ADU accelerate motor assy. (Refer to [F.5.9.26 Replacing the ADU accelerate motor \(M14\) and the ADU accelerate motor belt](#))
10. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
11. Remove the transfer pressure unit. (Refer to [28.8.32 Replacing the transfer belt pressure release motor \(M: 26\)](#))
12. Open the open/close plate [1] and remove 2 screws [2].
13. Remove 4 screws [3] and remove the ADU fixing plate [4].

Note

- When reinstalling the ADU fixing plate, be sure to set 2 positioning holes [5] to 2 projections [6] of the duplex section.

14. Remove 1 springs [2].

15. Remove 3 screws [2] and remove the reverse/exit motor assy [3].

16. Disconnect the connector [1].

17. Remove the E-ring [2] and 2 screws [3], and remove the pulley [4].

18. Remove 3 screws [5] and remove the reverse/exit motor (M13) [6].

19. Reinstall the above parts following the removal steps in reverse.

5.9.35 Replacing the reverse/exit solenoid (SD7) and the de-curler solenoid /Up (SD8) and /Lw (SD5)

(1) Periodically replaced parts/cycle

- Reverse/exit solenoid (SD7)
 - : Every 40,000,000 prints*¹
 - : Every 30,000,000 prints*²
- De-curler solenoid /Up (SD8)
 - : Every 40,000,000 prints*¹
 - : Every 30,000,000 prints*²
- De-curler solenoid /Lw (SD5)
 - : Every 40,000,000 prints*¹

*¹ 1250/1250P/1052

*² 951

(2) Procedure

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))

2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))

3. Loosen 3 screws [1] and remove the reverse section cover [2].

4. Disconnect the connector [1].
5. Remove 3 screws [2] and remove the ADU cooling fan /3 assy [3].

6. Disconnect 2 connectors [1].
7. Remove the spring [2].
8. Remove the screw [3] and release the fixing of the actuator [4].
9. Remove 2 screws [5] and then remove the reverse/exit solenoid assembly [6].

Note

- When reinstalling the reverse/exit solenoid assy, be sure to set it to the same graduation [7] as that used for removal.

10. Remove the actuator [1].
11. Remove 2 screws [2] and remove the reverse/exit solenoid (SD7) [3].

**Note**

- When reinstalling the reverse/exit solenoid (SD7), be sure to fix it so that the gap [3] between the plunger [1] and the solenoid mounting bracket [2] is within the standard value.
Standard value: 3.8mm to 4.3mm

12. Disconnect the connector [1].
13. Remove the spring [2].
14. Remove the screw [3] and release the fixing of the actuator [4].
15. Remove 2 screws [5] and remove the de-curler solenoid /Lw assy [6].

Note

- When reinstalling the de-curler solenoid /Lw assy, be sure to set it to the same graduation [7] as that used for removal.

**Note**

- For the 951, since it does not have the de-curler solenoid / Lw assy, there is no need to conduct steps 12 to 15. The metal frame [1] is attached, but there is no need to remove it.

16. Remove 2 screws [1] and remove the de-curler solenoid /Lw (SD5).

**Note**

- When reinstalling the de-curler solenoid /Lw (SD5), be sure to fix it so that the gap [3] between the plunger [1] and the solenoid mounting bracket [2] is within the standard value.
Standard value: 3.8mm to 4.3mm

17. Disconnect the connector [1].
18. Remove the spring [2].
19. Remove the screw [3] and release the fixing of the actuator [4].
20. Remove 2 screws [5] and remove the de-curler solenoid /Up assy [6].

Note

- When reinstalling the de-curler solenoid /Up assy, be sure to set it to the same graduation [7] as that used for removal.

21. Remove 2 screws [1] and remove the de-curler solenoid /Up (SD8).

22. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling the de-curler solenoid /Up (SD8), be sure to fix it so that the gap [3] between the plunger [1] and the solenoid mounting bracket [2] is within the standard value.

Standard value: 3.8mm to 4.3mm

5.9.36 Removing/reinstalling the reverse/exit section**(1) Procedure**

a0g6t3c202ca

a0g6t3c203ca

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the reverse/exit solenoid assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
4. Remove the de-curler solenoid /Lw assy. (1250/1250P/1052 only) (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
5. Remove the de-curler solenoid /Up assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
6. Remove the duplex section cover /Lt. (Refer to 28.8.10 Removing/reinstalling the duplex section cover)
7. Remove 3 screws [1] and remove the de-curler motor cover [2].

8. Disconnect the connector [1] to release the wiring harness [2] from 5 wiring harness clamps [3].
9. Disconnect the connector [4] to release the wiring harness [5] from 8 wiring harness clamps [6].

10. Remove each 1 screw [1] and then remove each 1 fulcrum shaft [2].
11. Remove the reverse/exit section [3].
 - Note**
 - When reinstalling each fulcrum shaft [2], be sure to set it to the D-cut section [5] of the support plate [4].
12. Reinstall the preceding parts following the removal steps in reverse.

5.9.37 Replacing the reverse gate

(1) Periodically replaced parts/cycle

- Reverse gate
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *¹
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds) *²

*¹ 1250/1250P/1052

*² 951

(2) Procedure

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the reverse/exit solenoid assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
4. Remove the de-curler solenoid /Lw assy. (1250/1250P/1052 only) (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
5. Remove the de-curler solenoid /Up assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
6. Remove the reverse/exit section. (Refer to [F.5.9.36 Removing/reinstalling the reverse/exit section](#))
7. Open the reverse door [1] and remove the screws [2], 2 each, and then remove 2 magnet assys [3].

8. Remove the E-rings [1], 1 each, and remove 2 bearings [2].
9. Open the reverse door [3] and remove the reverse gate assembly [4] while sliding it to the arrow-marked directions [5] and [6] in this order.

10. Remove the screws [1], 1 each, and remove the reverse gates [2] and the guide member [3], seven each.
11. Reinstall the preceding parts following the removal steps in reverse.
12. After replacing the reverse gate, conduct the following item.
In case of 1250/1250P/1052
For the reverse gate: Counter reset of the parts counter No.120
For 951
For the reverse gate: Counter reset of the parts counter No.99

5.9.38 Replacing the fusing exit roller and the coupling unit

(1) Periodically replaced parts/cycle

- Fixing exit roller
 - : Every 8,000,000 prints*1
 - : Every 6,000,000 prints*2
- Coupling unit
 - : Every 16,000,000 prints*1
 - : Every 12,000,000 prints*2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/ reinstalling the fusing section](#))
3. Remove the reverse/exit solenoid assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
4. Remove the de-curler solenoid /Lw assy. (1250/1250P/1052 only) (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
5. Remove the de-curler solenoid /Up assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
6. Remove the reverse/exit section. (Refer to [F.5.9.36 Removing/ reinstalling the reverse/exit section](#))
7. Remove 2 screws [1], and then remove the duct assy [2].
8. Remove 2 E-rings [3] and washer [4] and then remove the coupling unit [5].
9. Remove 2 screws [6] to release the fixing of the bearing [7].

Note

- When reinstalling the bearing [7], be sure to set the notch to the position [8].
- To prevent the notch [8] from opening, be sure to tighten 2 screws [6] in the counterclockwise turn with the notch [8] as a starting point.

10. Remove the fusing exit roller assy [1] while sliding it in the arrow-marked directions [2] and [3] in this order.

11. Remove the E-rings [1], 2 each, and the pins [2], 1 each, and then remove 4 fusing exit rollers [3].
12. Reinstall the preceding parts following the removal steps in reverse.
13. After replacing the fusing exit roller and the coupling unit, be sure to conduct the followings.
In case of 1250/1250P/1052
- For the fusing exit roller: Counter reset of the parts counter No. 116
For the coupling unit: Counter reset of the parts counter No.121
For 951
- For the fusing exit roller: Counter reset of the parts counter No.96
For the coupling unit: Counter reset of the parts counter No.100

5.9.39 Replacing the de-curler motor (M32)**(1) Periodically replaced parts/cycle**

- De-curler motor (M32)
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints*2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the reverse/exit solenoid assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
4. Remove the de-curler solenoid /Lw assy. (1250/1250P/1052 only) (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
5. Remove the de-curler solenoid /Up assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
6. Remove the reverse/exit section. (Refer to [F.5.9.36 Removing/reinstalling the reverse/exit section](#))
7. Remove 4 screws [1] and remove the de-curler motor assy [2].
8. Remove 3 screws [1] and remove the de-curler motor (M32) [2].
9. Reinstall the above parts following the removal steps in reverse.

5.9.40 Replacing the de-curler entrance roller**(1) Periodically replaced parts/cycle**

- De-curler entrance roller
 - : Every 16,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 12,000,000 feeds)*2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the reverse/exit solenoid assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
4. Remove the de-curler solenoid /Lw assy. (1250/1250P/1052 only) (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
5. Remove the de-curler solenoid /Up assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
6. Remove the reverse/exit section. (Refer to [F.5.9.36 Removing/reinstalling the reverse/exit section](#))
7. Remove the de-curler motor assy. (Refer to [F.5.9.39 Replacing the de-curler motor \(M32\)](#))
8. Remove the E-ring [1].
9. Remove the pin [2] and remove the coupling [3] and the spring [4].
10. Remove 2 screws [5] and remove the bearing [6].
11. Remove the E-ring [7].
12. Remove the de-curler entrance roller [8] while sliding it in the arrow-marked directions [9] and [10] in this order.

Note

- When reinstalling the bearing [6], be sure to set the notch to the position [11].
- To prevent the notch [11] from opening, be sure to tighten 2 screws [5] in the counterclockwise turn with the notch [11] as a starting point.

13. Reinstall the preceding parts following the removal steps in reverse.
14. After replacing the de-curler entrance roller, conduct the following steps.
In case of 1250/1250P/1052
For the de-curler entrance roller: Counter reset of the parts counter No.119
For 951
For the de-curler entrance roller: Counter reset of the parts counter No.98

5.9.41 Replacing the de-curler belt /Lw (1250/1250P/1052 only)**(1) Periodically replaced parts/cycle**

- De-curler belt /Lw
: Every 16,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)

(2) Procedure

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the reverse/exit solenoid assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
4. Remove the de-curler solenoid /Lw assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
5. Remove the de-curler solenoid /Up assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
6. Remove the reverse/exit section. (Refer to [F.5.9.36 Removing/reinstalling the reverse/exit section](#))
7. Remove the de-curler motor assy. (Refer to [F.5.9.39 Replacing the de-curler motor \(M32\)](#))
8. Remove 2 E-rings [1] and remove 2 gears [2] and the belt [3].
9. Remove the E-ring [4] and remove the gear [5].
10. Remove the E-ring [6].

Note

- When reinstalling 2 bearings [2], be sure to set the flange of each gear alternately.

11. Remove 2 E-ring [1].
12. Remove 2 pins [2].
13. Slide 2 rollers [4] with the condition that the de-curler belt /Lw [3] is installed on, in the arrow-marked direction [5], and remove 2 pins [6].
14. Slide 2 regulation roller assys [7] in the arrow-marked direction [8] to release the rear section from the frame of the reverse/exit section.

15. Remove 7 de-curler belt /Lw [1].
16. Reinstall the preceding parts following the removal steps in reverse.
17. After replacing the de-curler belt /Lw, conduct the following steps.
For the de-curler belt /Lw: Counter reset of the parts counter No. 115

5.9.42 Replacing the de-curler belt /Up**(1) Periodically replaced parts/cycle**

- De-curler belt /Up
 - : Every 16,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *1
 - : Every 12,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2

*1 1250/1250P/1052

* 2 951

(2) Procedure

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the reverse/exit solenoid assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
4. Remove the de-curler solenoid /Lw assy. (1250/1250P/1052 only) (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
5. Remove the de-curler solenoid /Up assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
6. Remove the reverse/exit section. (Refer to [F.5.9.36 Removing/reinstalling the reverse/exit section](#))
7. Remove the de-curler motor assy. (Refer to [F.5.9.39 Replacing the de-curler motor \(M32\)](#))
8. Remove the E-rings [1], 1 each, and remove the open/close spring /Fr [2] and /Rr [3].
9. Remove 2 screws [4] and remove the stay [5].

Note

- When reinstalling the open/close spring /Fr [2] and /Rr [3], be sure to hang each hook [6] on the groove [7] of the stay [5].
- Be sure to locate the D-cut side [8] of the stay [5] on the rear side.

10. Remove 2 E-rings [1] and remove 2 gears [2] and the belt [3].
11. Remove the E-ring [4] and remove the gear [5].
12. Remove the E-ring [6].

Note

- When reinstalling 2 bearings [2], be sure to set the flange of each gear alternately.

13. Remove 2 E-ring [1].
14. Remove 2 pins [2].
15. Slide 2 rollers [4] with the condition that the de-curler belt /Up [3] is installed on, in the arrow-marked direction [5], and remove 2 pins [6].
16. Slide 2 regulation roller assys [7] in the arrow-marked direction [8] to release the rear section from the flame of the reverse/exit section.

17. Open the reverse door [1] and remove 7 de-curler belt /Up [2].
18. Reinstall the preceding parts following the removal steps in reverse.
19. After replacing the de-curler belt /Up, conduct the following steps.
In case of 1250/1250P/1052
For the de-curler belt /Up: Counter reset of the parts counter No. 115
For 951
For the de-curler belt /Up: Counter reset of the parts counter No.95

5.9.43 Replacing the guide member /Up and /Lw

(1) Periodically replaced parts/cycle

- Guide member /Up
: Every 16,000,000 prints (Actual replacement cycle: Every 8,000,000 feeds)^{*1}
: Every 12,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*2}
- Guide member /Lw
: Every 16,000,000 prints (Actual replacement cycle: Every 8,000,000 feeds)^{*1}

^{*1} 1250/1250P/1052

^{*2} 951

(2) Procedure

a0g6t3c221ca

a0g6t3c222ca

a0g6t3c223ca

1. Remove the duplex section. (Refer to [G.2.2.22 DUPLEX SECTION](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/ reinstalling the fusing section](#))
3. Remove the reverse/exit solenoid assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
4. Remove the de-curler solenoid /Lw assy. (1250/1250P/1052 only) (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
5. Remove the de-curler solenoid /Up assy. (Refer to [F.5.9.35 Replacing the reverse/exit solenoid \(SD7\) and the de-curler solenoid /Up \(SD8\) and /Lw \(SD5\)](#))
6. Remove the reverse/exit section. (Refer to [F.5.9.36 Removing/ reinstalling the reverse/exit section](#))
7. Remove the de-curler motor assy. (Refer to [F.5.9.39 Replacing the de-curler motor \(M32\)](#))
8. Remove de-curler belt /Up. (Refer to [F.5.9.42 Replacing the de-curler belt /Up](#))
9. Remove 2 regulation roller assy [1].

Note

- Be careful not to lose the bearings [2], 1 each, and the spacers [3], 1 each, installed in the regulation roller assy [1] without fixing.

10. Open the reverse door [1].
11. Remove the E-ring [2], and slide the guide member /Up [3] in the arrow-marked directions [4] and [5] in this order.

12. Remove 2 bearings [2] from the guide member /Up [1].

Note

- When reinstalling the bearing [2], be sure to turn each flange inside.

13. Remove the E-ring [1], and slide the guide member /Lw [2] in the arrow-marked directions [3] and [4] in this order.

14. Remove 2 bearings [2] from the guide member /Lw [1].

Note

- When reinstalling the bearing [2], be sure to turn each flange inside.

15. Reinstall the preceding parts following the removal steps in reverse.

16. After replacing the guide members /Up and /Lw, conduct the following items.

In case of 1250/1250P/1052

For the guide member /Up: Counter reset of the parts counter No. 117

For the guide member /Lw: Counter reset of the parts counter No. 118

For 951

For the guide member /Up: Counter reset of the parts counter No. 97

5.10 Fusing section

5.10.1 Way to distinguish the fusing roller /Up between 1250/1250P/1052 and 951.

Note

- The fusing rollers /Up are different in material and color between 1250/1250P/1052 and 951.
- The fusing roller /Up [1] of 1250/1250P/1052 is a soft roller in red.
- The fusing roller /Up [2] of 951 is a hard roller in black.

5.10.2 Replacing the fusing cleaning web

⚠ Note:

- The fusing section is extremely hot immediately after turning OFF the main power switch (SW1) or the sub power switch (SW2) of the main body. Be sure to start operations when the temperature cools down sufficiently.

(1) Periodically replaced parts/cycle

- Fixing cleaning web
 - : Every 1,000,000 prints*1
 - : Every 750,000 prints*2

*1 1250/1250P/1052/EF

*2 951

(2) Procedure

- Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
- Remove 2 screws [1], and hold [2] and [3] to remove the fusing upper plate assy [4].

- Slide the old fusing cleaning web [1] in the arrow-marked direction to release it from 2 couplings [2].

- Install the shaft [2] on the unused side of the new fusing cleaning web [1] to the driven couplings /Rr [3] and /Fr [4].

Note

- Be sure to set each detent [5] on the driven couplings to the notch [6] of the shaft on the unused side. When the web is installed in the wrong direction, it does not coincide with the notch.

- Hold either side[8] of the shaft [7] on the take-up side of the new fusing cleaning web with both hands, and take up the new cleaning web until the blue line (PRESS 1250/1250P/1052) or green line (PRO951)[9] disappears.

Note

- The performance of the new fusing cleaning web is guaranteed from the position in which the blue line (PRESS 1250/1250P/1052) or green line (PRO951) disappears. Be sure to take up the cleaning web up to this position.

6. Set the shaft [2] on the take-up side of the new fusing cleaning web [1] to the take-up couplings /Rr [3] and /Fr [4].

Note

- Be sure to set each detent [5] on the driven coupling to the notch [6] of the shaft on the unused side.

7. Be sure that the following reinstallation of the parts follows the removal steps in reverse.
8. After replacing the fusing cleaning web, conduct the following steps.
For the main body
- For the fusing cleaning web: Counter reset of the parts counter No.46
For EF
- For the fusing cleaning web: Counter reset of the parts counter No.68

5.10.3 Removing/reinstalling the fusing section**⚠ Note:**

- The fusing section is extremely hot immediately after turning OFF the main power switch (SW1) or the sub power switch (SW2) of the main body. Be sure to start operations when the temperature cools down sufficiently.

(1) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Open the paper reverse/exit section [1].
3. Release the lock [2].
4. Hold the handle /Fr [3] and Rr [4] with both hands, and slide the fusing section [5] in the arrow-marked direction [6], and lift it up to remove it.

Note

- When reinstalling it, be sure to slide it with setting the fusing section to the reversal section side.

5. Reinstall the above parts following the removal steps in reverse.

5.10.4 Opening/closing of the web section**(1) Procedure**

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the fusing upper plate assy. (Refer to [F.5.10.2 Replacing the fusing cleaning web](#))
4. Remove 2 screws [1] and then remove the fusing cover [2].

5. Open the fusing paper exit section [1].
6. Remove 4 screws [2] and open the web section [3].
7. Reinstall the above parts following the removal steps in reverse.

5.10.5 Replacing the fusing heater lamps /1 (L1) and /2 (L2)

Note

- Be sure to avoid touching the lamp section of the fusing heater lamps /1 (L1) and /2 (L2) with bare hands. When touched, be sure to clean it with the isopropyl alcohol.

(1) Periodically replaced parts/cycle

- Fusing heater lamp /1 (L1)
 - : Every 4,000,000 prints*1
 - : Every 3,000,000 prints*2
- Fusing heater lamp /2 (L2)
 - : Every 4,000,000 prints*1
 - : Every 3,000,000 prints*2

*1 1250/1250P/1052/EF

*2 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the web section. (Refer to [F.5.10.4 Opening/closing of the web section](#))
4. Remove the faston terminal [2] from the fusing heater lamp /1 (L1) [1].
5. Remove the faston terminal [4] from the fusing heater lamp /2 (L2) [3].
6. Remove the screws [5], 1 each, and remove 2 wiring harness clamps [6].

Note

- When reinstalling the wiring harness clamp, be sure to install it in the correct position. When it is installed in a wrong position, the fusing cover cannot be attached.

7. Remove the faston terminal [7] from the fusing heater lamp /1 (L1) [1].
8. Remove the faston terminal [8] from the fusing heater lamp /2 (L2) [3].
9. Remove the screw [9] and remove the lamp fixing plate /Rr [10].
10. Pull out and remove each of the fusing heater lamps in the arrow-marked direction [11].

Note

- Be sure to install the fusing heater lamps /1 (L1) and /2 (L2) with the manufacturer mark in this side.
- When reinstalling the fusing heater lamp /1 (L1) and /2 (L2), be sure to insert it securely while taking note of the position in which the faston terminal is installed.
- When reinstalling each the fusing heater lamp, check if either end of each lamp is set in the fitting holes of the lamp fixing plates /Fr [12] and /Rr [10].
- After each fusing heater lamp is installed, check if it is not in touch with the inner face of the fusing roller /Up [13].

11. Reinstall the preceding parts following the removal steps in reverse.
12. After replacing the fusing heater lamp /1 (L1) and /2 (L2), conduct the following item.
For the main body
For the fusing heater lamps /1 and /2: Counter reset of the parts counter No.55
For EF
For the fusing heater lamps /1 and /2: Counter reset of the parts counter No.75

5.10.6 Replacing the fusing roller /Up, the heat insulating sleeve, the fusing bearing /Up and the fusing gear**(1) Periodically replaced parts/cycle**

- Fusing roller /Up
: Every 2,000,000 prints *1
: Every 1,500,000 prints *2
: Every 500,000 prints *3
- Heat insulating sleeve
: Every 2,000,000 prints *1*3
: Every 1,500,000 prints *2
- Fusing bearing /Up
: Every 2,000,000 prints *1*3
: Every 1,500,000 prints *2
- Fusing gear
: Every 8,000,000 prints *1*3
: Every 6,000,000 prints *2

*1 1250/1250P/1052

*2 951

*3 EF

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to F.5.9.1 Pulling out/reinstalling the duplex section)
2. Remove the fusing section. (Refer to F.5.10.3 Removing/reinstalling the fusing section)
3. Open the web section. (Refer to F.5.10.4 Opening/closing of the web section)
4. Remove the fusing heater lamps /1 (L1) and /2 (L2). (Refer to F.5.10.5 Replacing the fusing heater lamps /1 (L1) and /2 (L2))
5. Remove the fusing roller /Up [1].

6. Remove the C-ring [2], the fusing gear [3], the gear [4] (part not replaced), the heat insulating sleeve [5] and the fusing bearing [6] from the fusing roller /Up [1].

Note

- When reinstalling the heat insulating sleeve and the fusing bearing /Up, make sure that the flange [7] turns outside.
- When reinstalling the heat insulating sleeve, apply Multemp FF-RM (or Fluotribo MH) on the inside and outside surface.

7. Remove the C-ring [8], the heat insulating sleeve [9] and the fusing bearing [10] from the fusing roller /Up [1].

Note

- When reinstalling the heat insulating sleeve and the fusing bearing /Up, make sure that the flange [11] turns outside.

8. Reinstall the preceding parts following the removal steps in reverse.
9. After replacing the fusing roller /Up, the heat insulating sleeve, the fusing bearing /Up and the fusing gear, conduct the followings.
For the main body
- For the fusing roller /Up: Counter reset of the parts counter No.47
- For the heat insulating sleeve: Counter reset of the parts counter No.51
For the fusing bearing /Up: Counter reset of the parts counter No.52
- For the fusing gear: Counter reset of the parts counter No.62
For EF
- For the fusing roller /Up: Counter reset of the parts counter No.69
- For the heat insulating sleeve: Counter reset of the parts counter No.71
For the fusing bearing /Up: Counter reset of the parts counter No.72
For the fusing gear: Counter reset of the parts counter No.82

5.10.7 Replacing the fusing roller /Lw assy /Lubrication to the pressure warm assy**(1) Periodically replaced parts/cycle**

- Fusing roller /Lw assy
 - : Every 2,000,000 prints *1
 - : Every 1,500,000 prints *2
 - : Every 500,000 prints *3

* 1 1250/1250P/1052

* 2 951

* 3 EF

(2) Periodic lubrication parts/Cycle

- Pressure worm assy
 - : Every 2,000,000 prints *1

* 1 1250/1250P/1052/EF

(3) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the web section. (Refer to [F.5.10.4 Opening/closing of the web section](#))
4. Remove the fusing heater lamps /1 (L1) and /2 (L2). (Refer to [F.5.10.5 Replacing the fusing heater lamps /1 \(L1\) and /2 \(L2\)](#))
5. Remove the fusing roller /Up. (Refer to [F.5.10.6 Replacing the fusing roller /Up, the heat insulating sleeve, the fusing bearing /Up and the fusing gear](#))
6. Remove 2 screws [1] and remove the guide plate /Lw [2].

Note

- When reinstalling the guide plate /Lw, be sure to fix it while moving it down.

7. Remove the screw [1] and then remove the jam release knob [2].
8. Remove the fusing roller /Lw assembly [3].
9. Lubricate Multemp FF-RM to all around the pressure worm assy [4].

Note

- Lubrication to the pressure worm assy is required only for 1250/1250P/1052/EF.

10. Reinstall the preceding parts following the removal steps in reverse.
11. After replacing the fusing roller /Lw assy, conduct the following steps.
 - For the main body
 - For fusing roller /Lw assy: Counter reset of the parts counter No. 48
 - In case of EF
 - For fusing roller /Lw assy: Counter reset of the parts counter No. 70

5.10.8 Replacing the fusing cleaning sheet assy**(1) Periodically replaced parts/cycle**

- Fusing cleaning sheet assy
 - : Every 2,000,000 prints *1
 - : Every 1,500,000 prints *2

*1 1250/1250P/1052/EF

*2 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the web section. (Refer to [F.5.10.4 Opening/closing of the web section](#))
4. Remove the fusing heater lamps /1 (L1) and /2 (L2). (Refer to [F.5.10.5 Replacing the fusing heater lamps /1 \(L1\) and /2 \(L2\)](#))
5. Remove the fusing roller /Up. (Refer to [F.5.10.6 Replacing the fusing roller /Up, the heat insulating sleeve, the fusing bearing /Up and the fusing gear](#))
6. Remove the fusing roller /Lw assembly. (Refer to [F.5.10.7 Replacing the fusing roller /Lw assy /Lubrication to the pressure warm assy](#))
7. Remove 2 screws [1] and then remove the fusing cleaning unit [2].
8. Remove 2 screws [1] and then remove the fusing cleaning sheet assembly [2].
9. Remove the paper dust that has gathered in [3] of the fusing cleaning unit.
10. Reinstall the preceding parts following the removal steps in reverse.
11. After replacing the fusing cleaning sheet assy, conduct the following steps.
For the main body
- For fusing cleaning sheet assy: Counter reset of the parts counter No.53
In case of EF
- For fusing cleaning sheet assy: Counter reset of the parts counter No.73

5.10.9 Removing/reinstalling the fusing heating roller assembly**(1) Procedure**

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the fusing heater lamps /1 (L1) and /2 (L2). (Refer to [F.5.10.5 Replacing the fusing heater lamps /1 \(L1\) and /2 \(L2\)](#))
4. Remove the fusing roller /Up. (Refer to [F.5.10.6 Replacing the fusing roller /Up, the heat insulating sleeve, the fusing bearing /Up and the fusing gear](#))
5. Remove the fusing roller /Lw assembly. (Refer to [F.5.10.7 Replacing the fusing roller /Lw assy /Lubrication to the pressure warm assy](#))
6. Remove the fusing cleaning unit. (Refer to [F.5.10.8 Replacing the fusing cleaning sheet assy](#))
7. Remove the screws [1] and [2], and remove the connector cover [3].
8. Disconnect the connector [4].
9. Remove 2 screws [5] and then remove the fixing plate [6].

Note

- When reinstalling the fixing plate, be sure to set the positioning hole [7] to the projection [8] of the fusing section.
- Be careful not to insert the projection [10] of the fusing section inside of the fusing section [9] of the rear side of the fixing plate.

10. Remove 2 springs [1].
11. Remove the screw [2] and open the fusing heating roller assembly [3].

Note

- When reinstalling the fusing heating roller assy [3], be sure to set the guide hole [5] of the fusing heating roller assy to the guide pin [4] of the fusing section.

12. Reinstall the above parts following the removal steps in reverse.

5.10.10 Replacing the fusing heater lamp /3 (L3)**Note**

- Be careful not to touch the lamp section of the fusing heater lamp /3 (L3) with bare hands. When touched, be sure to clean it with the isopropyl alcohol.

(1) Periodically replaced parts/cycle

- Fusing heater lamp /3 (L3)
 - : Every 4,000,000 prints*1
 - : Every 3,000,000 prints*2

*1 1250/1250P/1052/EF

*2 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the fusing heating roller assembly. (Refer to [F.5.10.9 Removing/reinstalling the fusing heating roller assembly](#))
4. Cut off the 3 wiring bands [1].

Note

- When attaching a new wire binding band, be sure to use a heat-resistant one (P/N:V501010014).

5. Remove the faston terminal [2].

Note

- Be sure to install the fusing heater lamp /3 (L3) with the manufacturer mark in this side.
- When reinstalling the faston terminal, be sure to insert it securely.

6. Remove the screw [3] and remove the fixing plate /Rr [4].
7. Remove the screw [5] and remove the fixing plate /Fr [6].

Note

- When reinstalling the fixing plate /Fr, be sure to set the positioning hole [7] to the projection [8] of the fusing heating roller assy.

8. Pull out the fusing heater lamp /3 (L3) [9] from the front side [11] of the fusing heating roller assembly [10] and remove it.

Note

- When reinstalling the fusing heater lamp /3 (L3), be sure to take note of the direction.

- After reinstalling the fusing heater lamp /3 (L3), check if it is not in touch with the inner face of the fusing heating roller.
- Reinstall the preceding parts following the removal steps in reverse.
 - After replacing the fusing heater lamp /3 (L3), conduct the following item.
 - For the main body
 - For the fusing heater lamp /3: Counter reset of the parts counter No.59
 - For EF
 - For the fusing heater lamp /3: Counter reset of the parts counter No.79

5.10.11 Replacing the fusing heating roller, the heat insulation sleeve /Lw and the heat roller bearing

(1) Periodically replaced parts/cycle

- Fusing heating roller
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2
- Heat insulating sleeve /Lw
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2
- Heat roller bearing
 - : Every 4,000,000 prints *1
 - : Every 3,000,000 prints *2

*1 1250/1250P/1052/EF

*2 951

(2) Procedure

- Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
- Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
- Open the fusing heating roller assembly. (Refer to [F.5.10.9 Removing/reinstalling the fusing heating roller assembly](#))
- Remove the fusing heater lamp /3 (L3). (Refer to [F.5.10.10 Replacing the fusing heater lamp /3 \(L3\)](#))
- Remove the C-rings [1], 1 each, and remove the heat roller bearings [2], 1 each, and then remove the fusing heating roller [3].

Note

- When reinstalling the bearing, be sure to take note of the direction of the flange [4].

- Remove the heat insulating sleeves /Lw [5], 1 each, from the fusing heating roller.

Note

- When reinstalling the heat insulating sleeves /Lw, be sure to turn each flange to the fusing heating roller side.

- Reinstall the preceding parts following the removal steps in reverse.
- After replacing the fusing heater roller, the heat insulating sleeve /Lw and the heat roller bearing, conduct the following steps.
 - For the main body
 - For the fusing heating roller: Counter reset of the parts counter No.56
 - For the heat insulating sleeve /Lw: Counter reset of the parts counter No.57
 - For the fusing heating roller bearing: Counter reset of the parts counter No.60
 - In case of EF
 - For the fusing heating roller: Counter reset of the parts counter No.76
 - For the heat insulating sleeve /Lw: Counter reset of the parts counter No.77
 - For the heat roller bearing: Counter reset of the parts counter No.80

5.10.12 Replacing the fusing claw /Lw

(1) Periodically replaced parts/cycle

- Fusing claw /Lw

- : Every 2,000,000 prints*1
- : Every 1,500,000 prints*2

*1 1250/1250P/1052

*2 951

Note

- For EF-102, the fusing claw /Lw is not equipped so the replacement is not required.

(2) Procedure

[3] [4] a0g6t3c242ca

[4] a0g6t3c243ca

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the fusing paper exit section. (Refer to [F.5.10.4 Opening/closing of the web section](#))
4. Remove the screws [1], 1 each, and remove 2 fusing claw /Lw assys [2].

Note

- When reinstalling the fusing claw /Lw assys, be sure to set the positioning hole [3] to the projection [4] of the fusing paper exit section.

5. Remove the spring [2] from each fusing claw /Lw assy [1] and remove the fusing claw /Lw [3].

Note

- When reinstalling the fusing claw /Lw, be sure to take note of the position [4] to which the spring is hooked.

6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the fusing claw /Lw, conduct the following item.
 - For the fusing claw /Lw: Counter reset of the parts counter No.50

5.10.13 Replacing the fusing claw /Up

(1) Periodically replaced parts/cycle

- Fusing claw /Up
- : Every 2,000,000 prints*1
- : Every 1,500,000 prints*2

*1 1250/1250P/1052

*2 951

Note

- For EF-102, the fusing claw /Up is not equipped so the replacement is not required.

(2) Procedure

a0g6t3c244ca

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the fusing paper exit section. (Refer to [F.5.10.4 Opening/closing of the web section](#))
4. Remove the screws [1], 1 each, and remove 6 fusing claws /Up [2].
5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the fusing claw /Up, conduct the following item.
 - For the fusing claw /Up: Counter reset of the parts counter No.49

5.10.14 Replacing the fusing claws installation assy**(1) Periodically replaced parts/cycle**

- Fusing claws installation assy
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2

*1 1250/1250P/1052

*2 951

Note

- No need to replace for EF-102.

(2) Procedure

a0g6t3c245ca

[4]

a0g6t3c246ca

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the fusing paper exit section. (Refer to [F.5.10.4 Opening/closing of the web section](#))
4. Remove 4 screws [1] and remove the fusing claw unit /Up [2].

5. Remove the screws [1], 1 each, and remove 6 fusing claw /Lw assys [2].

Note

- When reinstalling the fusing claws installation assy, be sure to set 2 projections [3] to 2 positioning holes [5] of the fusing claw unit /Up [4].

6. Reinstall the preceding parts following the removal steps in reverse.

5.10.15 Replacing the fusing temperature sensor /2 (TH2)**⚠ Note:**

- After reinstalling of the fusing temperature sensor /2 assy, be sure to check if it is in touch with the fusing roller /Up.

(1) Periodically replaced parts/cycle

- Fusing temperature sensor /2 (TH2)

: Every 4,000,000 prints *1

: Every 3,000,000 prints *2

*1 1250/1250P/1052/EF

*2 951

(2) Procedure

1. Open the front doors /Rt and /Lt, and pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the fusing paper exit section [1].
4. Remove 4 screws [2] and 2 stepped screws [3], and remove the web section [4].

Note

- When attaching the stepped screw [3], make sure that it gets in securely up to the step of the screw.
- Be sure to remove the web section with it closed. If the web is removed with it open, the web section becomes unstable and you get injured.

5. Remove the screw [1] and then remove the connector cover [2].
6. Cut off the wiring band [3].

Note

- When attaching a wire binding band, be sure to use a heat-resistant one (P/N:V501010014).

7. Disconnect the connector [5] of the fusing temperature sensor /2 (TH2) [4].

Note

- There are 3 connectors of the fusing temperature sensor in the same place. The number of pins of each connector is different. The connector of the fusing temperature sensor /2 (TH2) is 3 pin connector.

8. Remove the screw [6] and remove the fusing temperature sensor /2 assy [7].

Note

- When reinstalling the fusing temperature sensor /2 assy, be sure to check if it is in touch with the fusing roller /Up [8].

9. Remove the screw [1], and remove the fusing temperature sensor / 2 (TH2) [2].
10. Reinstall the preceding parts following the removal steps in reverse.
11. After replacing the fusing temperature sensor / 2 (TH2), conduct the following item.
 - For the main body
 - For the fusing temperature sensor / 2: Counter reset of the parts counter No.61
 - In case of EF
 - For the fusing temperature sensor / 2: Counter reset of the parts counter No.81

5.10.16 Replacing the fusing temperature sensor / 4 (TH4)

⚠ Note:

- After reinstalling of the fusing temperature sensor / 4 assy, be sure to check if it is in touch with the fusing heating roller.

(1) Periodically replaced parts/cycle

- Fusing temperature sensor / 4 (TH4)
 - : Every 4,000,000 prints*1
 - : Every 3,000,000 prints*2

*1 1250/1250P/1052/EF

*2 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the fusing heating roller assembly. (Refer to [F.5.10.9 Removing/reinstalling the fusing heating roller assembly](#))
4. Remove the screw [1] and then remove the connector cover [2].
5. Cut off the wiring band [3].
6. Disconnect the connector [5] of the fusing temperature sensor / 4 (TH4) [4].

Note

- There are 3 connectors of the fusing temperature sensor in the same place. The number of pins of each connector is different. The connector of the fusing temperature sensor / 4 (TH4) is 5 pin connector.

7. Remove the screw [6] and remove the fusing temperature sensor / 4 assy [7].

Note

- When reinstalling the fusing temperature sensor 4 assy, be sure to set the positioning hole [8] to the projection [9] of the fusing heating roller assy.
- When reinstalling the fusing temperature sensor / 4 assy, be sure to check if it is in touch with the fusing heating roller [10].

8. Cut off the wiring band [1].
9. Remove the screw [2], and remove the fusing temperature sensor / 4 (TH4) [3].

Note

- When attaching a wire binding band, be sure to use a heat-resistant one (P/N:V501010014).

10. Reinstall the preceding parts following the removal steps in reverse.
11. After replacing the fusing temperature sensor / 4 (TH4), conduct the following item.
 - For the main body
 - For the fusing temperature sensor / 4 (TH4): Counter reset of the parts counter No.58
 - For EF
 - For the fusing temperature sensor / 4 (TH4): Counter reset of the parts counter No.78

5.10.17 Replacing the pressure worm assy and the pressure wheel assy (1250/1250P/1052/EF only)**(1) Periodically replaced parts/cycle**

- Pressure worm assy
: Every 40,000,000 prints (Actual replacement cycle: Every 30,000,000 activations)
- Pressure wheel assy
: Every 40,000,000 prints (Actual replacement cycle: Every 30,000,000 activations)

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the fusing cover. (Refer to [F.5.10.4 Opening/closing of the web section](#))
4. Open the fusing paper exit section. (Refer to [F.5.10.4 Opening/closing of the web section](#))
5. Disconnect the connector [1].
6. Remove 3 screws [2] and remove the pressure drive assy [3].

7. Remove the screw [1] and remove the pressure cover /Up [2].

Note

- When reinstalling the pressure cover /Up, be sure to set 2 positioning holes [3] to 2 projections [4] of the pressure drive assy.

8. Remove 4 screws [1] and remove the pressure worm assy [2].

Note

- When reinstalling the pressure worm assy, be sure to set 4 positioning holes [3] to 4 projections [4] of the pressure drive assy.

9. Remove the E-ring [1] and remove the bearing [2].

10. Remove 4 screws [3] and remove the pressure panel /4 [4].

11. Remove the E-ring [1] and remove the pressure wheel assy [2].
12. Reinstall the preceding parts following the removal steps in reverse.
13. After replacing the pressure worm assy and the pressure wheel assy, conduct the following steps.
For the main body
For the pressure worm assy: Counter reset of the parts counter No.65
For the pressure wheel assy: Counter reset of the parts counter No.66
For EF
For the pressure worm assy: Counter reset of the parts counter No.84
For the pressure wheel assy: Counter reset of the parts counter No.85

5.10.18 Replacing the fusing cleaning roller, the bearing /G and the web prevention part assy

(1) Periodically replaced parts/cycle

- Fusing cleaning roller
 - : Every 14,000,000 prints *1
 - : Every 10,500,000 prints *2
- Bearing /G
 - : Every 14,000,000 prints *1
 - : Every 10,500,000 prints *2
- Web prevention part assy
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2
- Bearing /G
 - : Every 24,000,000 prints *1
 - : Every 18,000,000 prints *2

*1 1250/1250P/1052 /EF

*2 951

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing upper plate assy. (Refer to [F.5.10.2 Replacing the fusing cleaning web](#))
3. Remove the fusing cleaning web. (Refer to [F.5.10.2 Replacing the fusing cleaning web](#))
4. Remove the E-ring [1] and remove the fusing cleaning roller [2].

5. Remove 2 bearings /G [2] from the fusing cleaning roller [1].

Note

- When reinstalling the bearing /G, be sure to turn each flange inside.

6. Loosen the screw [1] to release the tension of the spring [2].
7. Remove the E-ring [3] and remove the bearing /G [4].
8. Remove 4 screws [5] and remove the drive plate /3 [6].

Note

- When reinstalling the drive plate /3, be sure to set 2 positioning holes [7] to 2 projections [8] of the fusing upper plate assy.

9. Remove the web prevention part assy [1].
10. Reinstall the preceding parts following the removal steps in reverse.
11. After replacing the fusing cleaning roller and the web prevention part assy, conduct the followings.
 - For the main body
 - For the fusing cleaning roller: Counter reset of the parts counter No.54
 - For the web prevention part assy : Counter reset of the parts counter No.64
 - In case of EF
 - For the fusing cleaning roller: Counter reset of the parts counter No.74
 - For the web prevention part: Counter reset of the parts counter No.83

5.10.19 Replacing the fusing oscillation cam assy**(1) Periodically replaced parts/cycle**

- Fusing oscillation cam assy
- : Every 24,000,000 prints *1
- : Every 18,000,000 prints *2

*1 1250/1250P/1052

*2 951

Note

- No need to replace for EF-102.

(2) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9.1 Pulling out/reinstalling the duplex section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the fusing upper plate assy. (Refer to [F.5.10.2 Replacing the fusing cleaning web](#))
4. Open the web section. (Refer to [F.5.10.4 Opening/closing of the web section](#))
5. Remove 3 screws [1] and remove the fusing oscillation cam assy [2].
6. Reinstall the preceding parts following the removal steps in reverse.

5.11 Paper exit section

5.11.1 Removing/reinstalling the paper exit section

(1) Procedure

1. Remove the left cover. (Refer to [G.2.2.4 Left cover](#))
2. Disconnect the connector [1].
3. Remove 4 screws [2] and then remove the paper exit section [3].

Note

- When reinstalling the paper exit section, be sure to hook the retention hole [4] to the projection [5] of the frame and then set the positioning hole [6] to the positioning pin [7] of the frame.

4. Reinstall the above parts following the removal steps in reverse.

5.11.2 Cleaning paper exit sensor (PS3)

(1) Periodic cleaning cycle

- Paper exit sensor (PS3)
 - : Every 12,000,000 prints *1
 - : Every 10,500,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the left cover. (Refer to [G.2.2.4 Left cover](#))
2. Remove the paper exit section. (Refer to [F.5.11.1 Removing/reinstalling the paper exit section](#))
3. Clean the paper exit sensor (PS3) [1] with the blower brush.
4. Reinstall the preceding parts following the removal steps in reverse.

5.11.3 Replacing the main body paper exit roller

(1) Periodically replaced parts/cycle

- Output roller
 - : Every 12,000,000 prints (Actual replacement cycle: Every 8,000,000 feeds) *1
 - : Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 feeds) *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the left cover. (Refer to [G.2.2.4 Left cover](#))
2. Remove the paper exit section. (Refer to [F.5.11.1 Removing/reinstalling the paper exit section](#))
3. Remove the E-ring [1] and then remove the gear [2] and the pin [3].
4. Remove the E-ring [4] and remove the bearing [5].
5. Remove the E-ring [6] and then remove the bearing [7].
6. Move the main body paper exit roller [8] in the arrow-marked directions [9] and [10] in this order, and remove it.
7. Reinstall the preceding parts following the removal steps in reverse.
8. After replacing the main body paper exit roller, conduct the following steps.
In case of 1250/1250P/1052
For the paper exit roller of the main body: Counter reset of the parts counter No.122
For 951
For the paper exit roller of the main body: Counter reset of the parts counter No.101

5.12 Main body rear side**5.12.1 Way to distinguish between the main body rear side motor of 1250/1250P/1052 and the main body rear side motor of 951****Note**

- The motors on the rear side of the main body are different in shape between 1250/1250P/1052 and 951.
- The main body rear motor [1] of 1250/1250P/1052 has a fan [2].
- The main body rear motor [3] of 951 has no fan.

**5.12.2 Replacing the fusing motor (M1) and the fusing gear****(1) Periodically replaced parts/cycle**

- Fusing motor (M1)
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints*2
- Fusing gear
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints*2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Disconnect the connector [1].
3. Remove 4 screws [2] and remove the fusing motor assy [3].

4. Remove the E-ring [1] and remove the fusing gear [2].
5. Remove the pin [4] from the fusing motor (M1) [3].
6. Reinstall the above parts following the removal steps in reverse.

[4] a0g6t3c361ca

5.12.3 Replacing the web motor (M24)**(1) Periodically replaced parts/cycle**

- Web motor (M24)
- : Every 6,000,000 prints

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Disconnect the connector [1].
3. Remove 5 wiring bands [2].
4. Remove 2 screws [3] and remove the web motor assy [4].

5. Remove 2 screws [1] and remove the gear [3] from the web motor (M24) [2].
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the web motor (M24), conduct the following steps.
Counter reset of the parts counter No.63

5.12.4 Replacing the drum motor (M2)

(1) Periodically replaced parts/cycle

- Drum motor (M2)
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints*2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Remove 8 screws [1] and remove the IC unit [2].

3. Disconnect the connector [1].
4. Remove 2 screws [2] and remove PCI relay board assy [3].
5. Remove 3 screws [4] and remove the flywheel [5].

Note

- When removing the flywheel, be sure not to rotate in the arrow-marked direction [6].

6. Remove the spacer [1] and the gear [2], and then remove the pin [3].
7. Disconnect 2 connectors [4].
8. Release the wiring harness [6] from 3 wiring harness clamps [5].
9. Remove 4 screws [7], and then remove the drum drive assy [8].

10. Disconnect the connector [1].
11. Remove 4 screws [2] and remove the drum motor (M2).
12. Reinstall the above parts following the removal steps in reverse.

5.12.5 Replacing the drum cleaner motor (M35)

(1) Periodically replaced parts/cycle

- Drum cleaner motor (M35)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Disconnect the connector [1].
3. Remove 4 screws [2] and remove the drum cleaner motor (M35) [3].
4. Reinstall the preceding parts following the removal steps in reverse.

5.12.6 Replacing the developing motor (M3) and the developing screw motor (M21)**(1) Periodically replaced parts/cycle**

- Developing motor (M3)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Developing screw motor (M21)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Remove the flywheel. (Refer to [F.5.12.4 Replacing the drum motor \(M2\)](#))
3. Disconnect the connector [1].
4. Remove 4 screws [2] and remove the developing screw motor (M21) [3].
5. Disconnect the connector [4].
6. Remove 4 screws [5] and 2 board supports [6], and then remove the developing motor (M3) [7].

7. Remove the E-ring [1] and the gear [2].
8. Remove the pin [4] from the developing motor (M3) [3].
9. Reinstall the above parts following the removal steps in reverse.

[4]

a0g6t3c366ca

5.12.7 Replacing the transfer belt cleaning motor (M5) and the belt cleaning gear**(1) Periodically replaced parts/cycle**

- Transfer belt cleaning motor (M5)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Belt cleaning gear
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Remove the upper cover /Rr1. (Refer to [G.2.2.8 Upper cover /Rr1](#))
3. Remove the upper cover /Rr2. (Refer to [G.2.2.9 Upper cover /Rr2](#))
4. Remove the exterior mounting plate. (Refer to [F.5.5.7 Replacing the pump units /Lt and /Rt](#))
5. Remove the drum drive assy. (Refer to [F.5.12.4 Replacing the drum motor \(M2\)](#))
6. Disconnect the connector [1].
7. Remove 2 screws [2] and remove the transfer suction fan assy [3].

8. Release the wiring harness [2] from 6 wiring harness clamps [1].
9. Remove the screw [3], and remove the stay [4].

10. Disconnect the connector [1].
11. Remove 2 screws [2] and remove the cooling fan /2 assy [3].

12. Disconnect all the connectors which are connected to the printer control board (PRCB) [1].
13. Remove 6 screws [2] and remove the printer control board assy [3].

14. Disconnect the connector [1].
15. Remove 3 screws [2] and remove the transfer belt cleaning motor assy [3].

Note

- When reinstalling the transfer belt cleaning motor assy, be sure to set the projection [5] of the main body to the positioning hole [4].

[1]

16. Remove 4 screws [1] and remove the transfer belt cleaning motor (M5) [2].

17. Remove 4 screws [1] and remove the belt CL crimp /2 [2].

18. Remove 2 screws [1].

19. Remove the belt cleaning gear assy [1].

20. Remove 2 bearings [2].

21. Remove the E-ring [3] and then remove the spring [4] and the belt cleaning gear [5].

Note

- Be careful not to lose the pin [6].

22. Reinstall the above parts following the removal steps in reverse.

5.12.8 Replacing the waste toner motor (M9)

(1) Periodically replaced parts/cycle

- Waste toner motor (M9)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Disconnect 11 connectors [1].
3. Remove 7 screws [2] and remove the DC power supply /2 assy [3].

4. Disconnect the connector [1].
5. Remove 3 screws [2] and remove the waste toner motor assy [3].

Note

- When reinstalling the waste toner motor assy, be sure to set the projection [5] of the main body to the positioning hole [4].

6. Remove 4 screws [1] and remove the waste toner motor (M9) [2].
7. Reinstall the above parts following the removal steps in reverse.

5.12.9 Replacing the paper exit motor (M20)**(1) Periodically replaced parts/cycle**

- Paper exit motor (M20)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Disconnect the connector [1].
3. Remove 2 screws [1] and remove the cooling fan /1 (FM1) [3].

4. Disconnect the connector [1].
5. Remove 4 screws [2] and remove the paper exit motor (M20) [3].
6. Reinstall the above parts following the removal steps in reverse.

5.12.10 Replacing the paper exit conveyance motor (M31)

(1) Periodically replaced parts/cycle

- Paper exit conveyance motor (M31)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Disconnect all the connectors which is connected to the AC drive board (ACDB) [1].
3. Remove 4 screws [2] and remove AC drive board assy [3].

4. Disconnect the connector [1].
5. Remove 4 screws [2] and remove the paper exit conveyance motor (M31).
6. Reinstall the above parts following the removal steps in reverse.

5.12.11 Replacing the paper feed motor (M4), the paper feed gear, the vertical conveyance motor (M8) and the conveyance gear

(1) Periodically replaced parts/cycle

- Paper feed motor (M4)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Paper feed gear
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Vertical conveyance motor (M8)
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Conveyance roller
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

* 1 1250/1250P/1052

* 2 951

(2) Procedure

[1] [2]

[1]

[2]

[1]

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Remove the right cover. (Refer to [G.2.2.3 Right cover](#))
3. Remove the IC Unit. (Refer to [F.5.12.4 Replacing the drum motor \(M2\)](#))
4. Remove 2 screws [1] and remove the connector mounting plate [2].

5. Remove 8 screws [1] and remove the DC power supply /1 assy [2].

[2]

[1]

[2]

[3]

6. Disconnect the connector [1].
7. Remove 6 screws [2] and then remove the paper feed motor drive unit [3].

8. Remove the E-ring [1], push down the coupling [2] and then remove the pin [3].
9. Remove the coupling [2] and the spring [4].

10. Remove the E-ring [1] and the gear [2].

Note

- When removing the gear [2], be careful not to drop the pin [3].

11. Remove 4 screws [1] and remove the gear cover [2].

12. Remove the 4 screws [1].

13. Release the paper feed gear [1] from the belt [2], and remove the paper feed motor assy [3].

Note

- When reinstalling the paper feed motor assy, be sure to fit the paper feed gear [1] to the belt [2].

14. Remove the E-ring [2] from the paper feed motor (M4) [1], and remove the belt press collar [3], the paper feed gear [4] and the pin [5].

Note

- When removing the paper feed gear [4], be careful not to drop the pin [5].
- Do not wipe off the grease that applied to the groove which receives the pin.

a0g6t3c325ca

15. Remove 2 screws [1] and remove the developing suction filter [2].

a0g6t3c326ca

16. Remove the wiring harness from the clamp [1].
17. Remove 3 screws [2] and remove the developing mounting plate [3].

18. Disconnect the connector [1] and remove 4 screws [2].
19. Remove the vertical conveyance motor assy [3].

20. Remove the E-ring [1], and remove the conveyance gear [2] and the pin [3].

Note

- When removing the conveyance gear [2], be careful not to drop the pin [3].

21. Remove 4 screws [4] and remove the vertical conveyance motor (M8) [5].
22. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling the vertical conveyance motor (M8) [5], apply the plas guard No.2.

6. PERIODICAL MAINTENANCE PROCEDURE DF-615 /616

6.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

6.2 Paper feed section

6.2.1 Replacing the pick-up roller/paper feed roller/paper feed assist roller

(1) Spotted replaced parts/cycle

- Pick-up roller
: Spot replacement (Actual replacement cycle: Every 800,000 feeds)
- Paper feed roller
: Spot replacement (Actual replacement cycle: Every 800,000 feeds)
- Paper feed assist roller
: Spot replacement (Actual replacement cycle: Every 800,000 feeds)

(2) Procedure

1. Open the open-close cover [1].
2. Lift up the stopper [2].
3. Remove the spring [3].

[2] [3] a10tt3c001ca

[2] a10tt3c002ca

4. Slide each of the bearing [1] and the one-way clutch [2] to the outside.

5. Slide the pick-up roller unit [1] to the front side once to release it from the coupling [2], and remove it upward.

Note

- When reinstalling the pick-up roller unit, be sure to engage the projection [3] of the pick-up roller unit to the tray upper limit sensor (PS315) [4]. Otherwise, paper is not fed correctly.
- When reinstalling the pick-up roller unit, make sure that the fold [5] of the pick-up roller unit comes above the fold [6] of the stay. If it comes under the fold, paper is not fed correctly.

6. Be sure to place the pick-up roller so that the one-way clutch [1] is at the lower left.
7. Remove the belt [2].
8. Remove the C-clip [3] and remove the bearing [4].
9. Pull out the shaft [6] of the pick-up roller [5] in the arrow-marked direction [7], and remove the pick-up roller.

Note

- The washer is inserted between the bearing [8] and the gear [9]. Be careful not to loose it.
- When reinstalling the pick-up roller, be sure to turn the arrow-mark [10] of the pick-up roller to the gear [9] side. Otherwise, paper is not fed correctly.

10. Remove the C-clip [1] and remove the bearing [2].
11. Slide the gear [3] in the arrow-marked direction [4] and remove the pin [6] from the shaft [5].
12. Pull out the shaft [5] in the arrow-marked direction [7] and remove the paper feed assist roller [8].

Note

- Be careful not to lose the pin [6].
- When reinstalling the gear [3], be sure to turn the detent [9] to the paper feed assist roller [8] side.
- When reinstalling the paper feed assist roller [8], be sure to turn the arrow-mark [10] of the paper feed assist roller to the opposite of the gear [3] side. Otherwise, paper is not fed correctly.

13. Remove the E-ring [1], and remove the washer [2], the spring [3], and the bearing [4].

14. Remove the C-clip [1] and remove the bearing [2].

15. Slide the gear [3] in the arrow-marked direction [4] and remove the pin [6] from the shaft [5].

Note

- Be careful not to lose the pin [6].
- When reinstalling the gear [3], be sure to set the pin [6] to the detent hole [7].

16. Remove 2 C-clips [8].

17. Remove the shaft [5] and remove the paper feed roller [9].

Note

- When reinstalling the paper feed roller [9], be sure to turn the arrow-mark [10] of the paper feed assist roller to the opposite of the gear [3] side. Otherwise, paper is not fed correctly.

18. Reinstall the preceding parts following the removal steps in reverse.

19. After you replace the pick-up roller, paper feed roller and paper feed assist roller, conduct the following items.

For DF-615

For the pick up roller: Counter reset of the parts counter No.222

For the feed roller: Counter reset of the parts counter No.223

For the paper feed assist roller: Counter reset of the parts counter No.225

For DF-616

For the pick up roller: Counter reset of the parts counter No.158

For the feed roller: Counter reset of the parts counter No.159

For the paper feed assist roller: Counter reset of the parts counter No.161

6.2.2 Replacing the separation roller/torque limiter

(1) Spotted replaced parts/cycle

- Separation roller
: Spot replacement (Actual replacement cycle: Every 400,000 feeds)
- Torque limiter
: Spot replacement (Actual replacement cycle: Every 800,000 feeds)

(2) Procedure

[2]

a10tt3c008ca

1. Remove the pick-up roller unit. (Refer to [F.6.2.1 Replacing the pick-up roller/paper feed roller/paper feed assist roller](#))
2. Release the hooks [2] of the assist roller assy [1] and remove the assist roller assy [1].

[2]

[1]

a10tt3c009ca

3. Slide 2 bearings [1] and remove the separation roller unit [2].

4. Remove the E-ring [1], and remove the gear [2] and the bearing [3].
5. Remove the C-clip [4] and remove the separation roller [5].

Note

- When reinstalling the separation roller, be sure to set the cross cut [6] to the projection [8] of the torque limiter [7].

6. Remove the torque limiter [1].

Note

- Be careful not to lose the detent pin [2] for the torque limiter.
- When reinstalling the torque limiter, be sure to set the pin to the detent hole [3].

7. Reinstall the preceding parts following the removal steps in reverse.
8. After replacing the separation roller and the torque limiter, conduct the followings.
For DF-615
For the separation roller: Counter reset of the parts counter No.224
For the torque limiter: Counter reset of the parts counter No.226
For DF-616
For the separation roller: Counter reset of the parts counter No.160
For the torque limiter: Counter reset of the parts counter No.162

6.2.3 Cleaning the pick-up roller unit**(1) Periodic cleaning cycle**

- Pick-up roller
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Paper feed roller
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Paper feed assist roller
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 DF-615

*2 DF-616

(2) Procedure

1. Remove the pick-up roller unit. (Refer to [F.6.2.1 Replacing the pick-up roller/paper feed roller/paper feed assist roller](#))
2. Clean the pick-up roller [1], the paper feed roller [2] and the paper feed assist roller [3] with the Isopropyl alcohol and the cleaning pad.
3. Reinstall the above parts following the removal steps in reverse.

6.2.4 Cleaning the cleaning pad/registration roller**(1) Periodic cleaning cycle**

- Cleaning pad
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Registration roller
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 DF-615

*2 DF-616

(2) Procedure

1. Open the open-close cover [1].
2. Remove the screw [2] and remove the cleaning pad [3].
3. Clean the registration roller [4] with the isopropyl alcohol and the cleaning pad.

4. Clean the cleaning section [2] of the cleaning pad [1] with the blower brush.
5. Reinstall the above parts following the removal steps in reverse.

6.2.5 Cleaning the pre-separation rubber**(1) Periodic cleaning cycle**

- Pre-separation rubber
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 DF-615

*2 DF-616

(2) Procedure

a10tt3c014ca

1. Remove the pick-up roller unit. (Refer to [F.6.2.1 Replacing the pick-up roller/paper feed roller/paper feed assist roller](#))
2. Clean the pre-separation rubber [1] with Isopropyl alcohol and a cleaning pad.
3. Reinstall the above parts following the removal steps in reverse.

6.2.6 Cleaning the paper feed section sensor**(1) Periodic cleaning cycle**

- Original count sensor (PS310)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Original size sensor /Lt (PS303)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Original size sensor /Rt (PS302)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 DF-615

*2 DF-616

(2) Procedure

a10tt3c015ca

1. Close the DF.
2. Clean the original count sensor (PS310) [1], the Original size sensor /Lt (PS303) [2] and the Original size sensor /Rt (PS302) [3] with the blower brush.

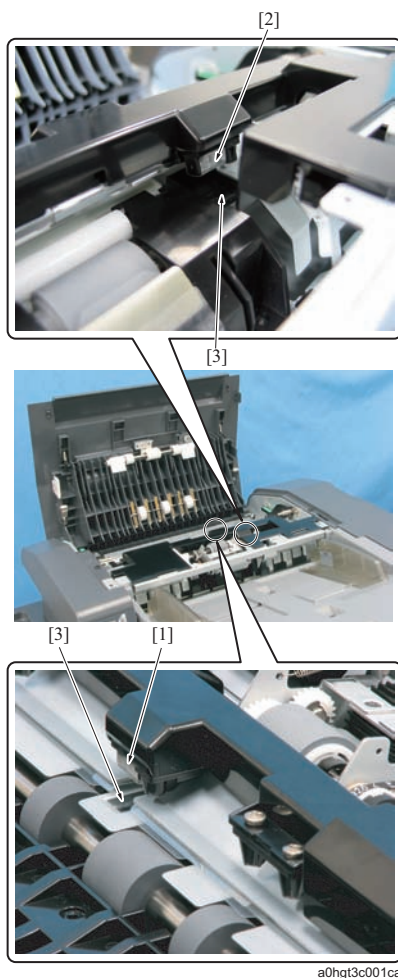

6.3 Conveyance section

6.3.1 Cleaning the conveyance section sensor (DF-615)

(1) Periodic cleaning cycle

- Original registration sensor /Lt (PS306)
: Every 1,000,000 prints
- Original registration sensor /Rt (PS318)
: Every 1,000,000 prints

(2) Procedure

1. Remove the pick-up roller unit. (Refer to [F.6.2.1 Replacing the pick-up roller/paper feed roller/paper feed assist roller](#))
2. Clean the original registration sensors /Lt (PS306) [1], /Rt (PS318) [2] and the original registration mirror [3] with the blower brush.
3. Reinstall the above parts following the removal steps in reverse.

6.3.2 Cleaning the conveyance section sensor (DF-616)

(1) Periodic cleaning cycle

- Original registration sensor /Lt (PS306)
: Every 750,000 prints

(2) Procedure

a10tt3c016ca

1. Open the open-close cover.
2. Clean the original registration sensor /Lt (PS306) [1] and the original registration mirror [2] with the blower brush.
3. Reinstall the above parts following the removal steps in reverse.

6.4 Read section**6.4.1 Cleaning the read section sensor/mirror for the sensor****(1) Periodic cleaning cycle**

- Original conveyance sensor (PS308)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Original skew sensor /Rr (PS311)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Original skew sensor /Fr (PS312)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 DF-615

*2 DF-616

(2) Procedure

df603fs2014c

1. Open the DF.
2. Open the original glass guide [1].
3. Remove 2 screws [2] and then remove the driven roller assy [3].
4. Remove 4 screws [4] and then remove the conveyance guide [5].

df603fs2015c

5. Clean 3 mirrors [2] of the conveyance guide [1] with the blower brush.

6. Close the original glass guide and then close the DF.
7. Open the open-close cover [1]. (The picture shows the condition after the cover is opened.)
8. Raise up the conveyance guide open-close lever [2]. (The picture shows the condition after the lever is raised up.)
9. Clean the original skew sensor /Fr (PS312) [3], the original conveyance sensor (PS308) [4] and the original skew sensor /Rr (PS311) [5] with the blower brush.
10. Reinstall the above parts following the removal steps in reverse.

6.4.2 Cleaning of the centering sensor (DF-615 only)

(1) Periodic cleaning cycle

- Centering sensor /Fr (PS320), /Rr (PS321)
: Every 1,000,000 prints
- Centering LED sensor /Fr (PS319), /Rr (PS322)
: Every 1,000,000 prints

(2) Procedure

1. Remove the screw [1] and remove the sensor cover [2].
2. Remove the screw (stepped screw) [3] and the screw [4]. Pull out the lower section of the DF cover /Lt [5] and remove it while pulling it down.

Note

- Be sure to insert the upper section of the DF cover /Lt [5] when reinstalling it.

3. Remove the screw [1] and then remove the sensor mounting plate [2].

Note

- When reinstalling it, be sure to install the sensor mounting plate [2] to the dowels [3] and [4] for the A4 position and to the dowels [4] and [5] for the LT (8¹/₂ x 11) position. (Refer to [I.10.5 Centering sensor switchover adjustment \(DF-615 only\)](#))

df603fs2039c

4. Clean the centering sensor /Fr (PS320) [1] and the centering LED sensor /Fr (PS319) [2] with the blower brush.

[1] [2]

df603fs2040c

5. Remove the screw [1] and then remove the centering sensor /Rr (PS321) [2].

df603fs2041c

6. Clean the centering sensor /Rr (PS321) [1] and the centering LED sensor /Rr (PS322) [2] with the blower brush.
7. Reinstall the above parts following the removal steps in reverse.

6.5 Paper exit section

6.5.1 Cleaning the mirror on the driven roller assembly/paper exit section sensor/mirror for the sensor

(1) Periodic cleaning cycle

- Mirror on the driven roller assy
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Original reverse sensor (PS309)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Reverse jam sensor (PS304)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2
- Original reverse-exit sensor (PS313)
 - : Every 1,000,000 prints *1
 - : Every 750,000 prints *2

*1 DF-615

*2 DF-616

(2) Procedure

1. Remove the driven roller assy. (Refer to [F.6.4.1 Cleaning the read section sensor/mirror for the sensor](#))
2. Clean the mirror [2] on the driven roller assy [1] with the blower brush.

3. Open the original glass guide [1].
4. Clean the Original reverse sensor (PS309) [2], the reverse jam sensor (PS304) [3] and the original reverse-exit sensor (PS313) [4] with the blower brush.

5. Clean 2 mirrors [2] on the back of the original glass guide [1] with the blower brush.
6. Reinstall the above parts following the removal steps in reverse.

7. PERIODICAL MAINTENANCE PROCEDURE PF-703

7.1 Precautions on maintenance

⚠ Note

- Be sure to unplug the power plug from the power outlet.

Note

- The gear [2] with the pin [1] is attached on every drive sections of DF-703. Do not wipe off the grease that is applied to the groove receiving the pin [3] when removing and attaching the gear.

7.2 Paper feed tray section

7.2.1 Replacing procedure of the shutter solenoids /1 (SD10), /2 (SD11), /3 (SD12)

(1) Periodically replaced parts/cycle

- Paper leading edge shutter solenoid
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Procedure

Note

- It explains with the tray1 in the picture but the procedure is the same for the trays 2 and 3.

a0gdt3c001ca

a0gdt3c002ca

1. Remove the paper leading edge separation fan. (Refer to [G.4.2.9 Paper leading edge separation fan /Fr1 \(FM3\), /Fr2 \(FM7\), /Fr3 \(FM11\), /Rr1 \(FM4\), /Rr2 \(FM8\), /Rr3 \(FM12\)](#))
2. Remove 2 connectors [1].
3. Remove 2 screws [2], and then remove the air duct [3] obliquely downward [5] along the metal plate [4].

Note

- When reinstalling it, be sure to align 2 fins [6] of the air duct [3] with the notch [7] of the metal plate.

4. Remove 2 screws [1] and the connector [2], and then remove the upper limit sensor mounting plate [3].

5. Remove 4 screws [1], tilt the fan mounting plate [2], and then remove it in the arrow-marked direction [3].

6. Disconnect the connector [1].
7. Remove the E-ring [2] and then pull out from the shaft [3].
8. Remove 2 screws [4] and then remove the paper leading edge shutter solenoids /1 (SD10), /2 (SD11), and /3 (SD12) [5].

Note

- When reinstalling it, be sure to install so that the wiring harness [6] of the paper leading edge shutter solenoid is in the direction in the picture.

9. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling it, be sure to install the air duct [1] temporary and fix it with the screws [4] so that the gap A of the plunger [2] gets to the standard value at the position with the shutter [3] contacting to the air duct [1] by pulling the plunger.
- Standard value: A = 0.2mm to 0.7mm

7.2.2 Replacing the shutter solenoids /Fr1 (SD4), /Fr2 (SD6), /Fr3 (SD8), /Rr1 (SD5), /Rr2 (SD7) and /Rr3 (SD9)

(1) Periodically replaced parts/cycle

- Shutter solenoid /Fr1 (SD4), /Fr2 (SD6), /Fr3 (SD8), /Rr1 (SD5), /Rr2 (SD7), /Rr3 (SD9)
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Removing procedure of the side guide assy

1. Pull out the tray at the maximum. (Refer to [G.4.2.6 Tray](#))
2. Loosen 1 each of the screws [1] of the side guides /Fr and /Rr.
3. Remove each of the screws [2], 2 each, and shorten the reinforcing plate [3].
4. Remove the screws [4], 1 each, and remove the reinforcing hinge [5] from the pin [6].

Note

- Be careful that the screw [4] is the stepped screw.

5. Remove 1 each of the screws [1] at 2 positions, and then remove 1 each of the mounting metal fittings [2].
6. Remove the covers /Fr [3] and /Rr [4] by lifting it upward.

Note

- When removing/installing the covers /Fr and /Rr, be sure to push the flap slightly into the side guide and not to damage it.

7. Remove 1 each of the connectors [1].
8. Remove 2 each of the screws [2].

Note

- When reinstalling it, tighten the screws temporary and check the parallel between the side guides /Fr and /Rr by using paper, and then tighten the screws fully.

9. Remove the side guide /Rr [3].
10. Remove the side guide /Fr [5] by pressing the side guide lock lever [4].
11. Reinstall the preceding parts following the removal steps in reverse.

(3) Removing procedures of the shutter solenoids /Fr1 (SD4), /Fr2 (SD6) and /Fr3 (SD8)

1. Remove the side guide assy /Fr. (Refer to [F.7.2.2.\(2\) Removing procedure of the side guide assy](#))
2. Remove 2 screws [1] and remove the cover [2], [3].

Note

- The covers [2], [3] have the projection on the bottom, be sure to put it into the positioning hole on the side guide.
- Be sure to check that the slide knob [4] moves smoothly after installing the cover [3].

3. Remove 2 screws [5] and then remove the lever cover [6] by pressing the side guide lock lever [7] slightly.

4. After removing 10 screws [1], rotate the small size guide [2], release the magnet, and then remove the cover [3].

Note

- When reinstalling it, be careful that the cover does not press the E-ring [4].

5. Remove the screw [1] and then remove the supporting bracket [2] and the side guide lock lever [3].

a0gdt3c077ca

a0gdt3c078ca

a0gdt3c079ca

6. Disconnect the connector [1].
7. Remove 2 screws [2] and then pull out the body [3] of the shutter solenoids /Fr1 (SD4), /Fr2 (SD6), and /Fr3 (SD8) from the plunger [4].

Note

- When reinstalling the body [3] of the shutter solenoid /Rr, be sure to install so that the wiring harness [5] is in the direction in the picture.

8. Remove 2 E-rings [1] and then remove the plunger [3] by pulling out the pin [2].

9. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling it, be sure to install so that the gap A is the standard value at the position with the shutter [2] contacting to the metal plate [3] by pulling the plunger [1]. Standard value "a": = 0.2mm to 0.7mm

(4) Replacing procedure of the shutter solenoids /Rr1 (SD5), /Rr2 (SD7), /Rr3 (SD9)**Note**

- The removing/installing procedure of the shutter solenoid is common between the trays 1, 2, and 3 but the layout of the wiring harness is different at some part. This section shows the procedure for the tray1 and the different parts are described in the procedure.

1. Remove the side guide assy /Rr. (Refer to [F.7.2.2.\(2\) Removing procedure of the side guide assy](#))
2. Remove 2 screws [1] and remove the cover [2], [3].

Note

- The covers [2], [3] have the projection on the bottom, be sure to put it into the positioning hole on the side guide.
- Be sure to check that the slide knob [4] moves smoothly after installing the cover [3].

3. After removing 9 screws [1], rotate the small size guide [2], release the magnet, and then remove the cover [3].

Note

- When reinstalling it, be careful that the cover does not press the E-ring [4].

4. Remove 2 connectors [1].

Note

- The picture shows the tray1. Be sure that the layout of the wiring harness is different on the tray2 and 3.

5. Remove the paper feed assist fan /Rr [2].
6. Remove 2 screws [3] and then pull out the body [4] of the shutter solenoids /Rr1 (SD5), /Rr2 (SD7), and /Rr (SD9) from the plunger [5].

Note

- When reinstalling the body [4] of the shutter solenoid /Rr1 on the tray1, be sure to install so that the wiring harness faces upward [6] like in the picture.
- When reinstalling the body [4] of the shutter solenoids /Rr2, /Rr3 on the tray /2, /3, be sure to install so that the wiring harness faces downward [7] like in the picture.

7. Remove E-ring [8] and then remove the plunger [5] by pulling out the pin [9].

8. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling it, be sure to install so that the gap A is the standard value at the position with the shutter [2] contacting to the metal plate [3] by pulling the plunger [1]. Standard value "a": = 0.2mm to 0.7mm

7.2.3 Cleaning the paper feed sensor /1 (PS2), /2 (PS6), /3 (PS10)

(1) Periodically cleaned parts/cycle

- Paper feed sensor /1 (PS2), /2 (PS6), /3 (PS10)

: Every 1,000,000 prints

(2) Procedure

1. Pull out the tray at the maximum. (Refer to [G.4.2.6 Tray](#))
2. Remove 2 screws [1].
3. Turn back the sensor mounting plate [2] and clean the paper feed sensor [3].
4. Reinstall the preceding parts following the removal steps in reverse.

7.3 Paper feed suction section

7.3.1 Replacing the torque limiter

(1) Periodically replaced parts/cycle

- Torque limiter
- : Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Removing procedure of the paper feed suction unit

1. Remove the tray. (Refer to [G.4.2.6 Tray](#))
2. Remove the rear cover. (Refer to [G.4.2.3 Rear cover](#))
3. Remove 2 connectors [1].

4. Remove the screw [1] and then remove the paper feed suction unit [2] in the arrow-marked direction [3].

- Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling it, be sure to put the coupling [1] to the coupling pin [2], the holder pin [3] to the hole [4], and each positioning pins to the corresponding holes.

(3) Replacing procedure of the torque limiter

- Remove the paper feed suction unit. (Refer to [F.7.3.1.\(2\) Removing procedure of the paper feed suction unit](#))
- Remove the E-ring [1] and then remove the torque limiter assy [2].

**Note**

- When reinstalling it, be sure to set the D-cut [1] of the shaft to the straight line side [2] of the hole.

3. Remove the E-ring [1], remove the bearing [2] and the gear [3], and then remove the torque limiter [5] from the shaft [4].
4. Reinstall the preceding parts following the removal steps in reverse.

7.3.2 Replacing the paper feed clutch /1 (CL7), /2 (CL8), /3 (CL9)

(1) Periodically replaced parts/cycle

- Paper feed clutch /1 (CL7), /2 (CL8), /3 (CL9)
: Every 24,000,000 prints (Actual replacement cycle: Every 3,000,000 prints)

(2) Procedure for removal

1. Remove the paper feed suction unit. (Refer to [F.7.3.1 Replacing the torque limiter](#))
2. Disconnect the connector [1].
3. Remove the C-clip [2] and remove the paper feed clutch/1 (CL7), /2 (CL8), /3 (CL9).

Note

- When reinstalling it, be sure to put the claw [3] to the depression [4] of the metal plate.

4. Reinstall the preceding parts following the removal steps in reverse.

7.3.3 Replacing the paper feed belt

(1) Periodically replaced parts/cycle

- Paper feed belt
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Procedure for removal

1. Remove the paper feed suction unit. (Refer to [F.7.3.1 Replacing the torque limiter](#))
2. Remove the paper feed clutch. (Refer to [F.7.3.2 Replacing the paper feed clutch /1 \(CL7\), /2 \(CL8\), /3 \(CL9\)](#))
3. Disconnect 2 connectors [1] and remove the wiring harness [2] between the wiring harness clamps [2] from the connector [1].
4. Remove 2 screws [4] and then remove the wiring plate [5].

5. Remove 2 each of screws [1], and remove the sensor assy [2], [3].

Note

- Be careful that the sensor assy [2] has the wiring harness clamp [4].

6. Remove 4 screws [1] and then turn it back by holding both of the belt unit assy [2] and the suction duct assy [3].

7. Remove the shaft [2] together with the bearing [1] from the metal plate [3], and the suction duct assy [4] from the belt unit assy [5] by pulling out in the arrow-marked direction [6].

Note

- Since the bearing [7] and the rotating shaft [8] are not secured, be careful not to lose them.

8. Remove the E-ring [1] and then remove the bearing [2].
9. Move the bearing [3] and then pull out the belt drive roller assy [4] from the paper feed belt [5].

Note

- Be sure to check that the paper feed belt is not tilt against the roller and rotates smoothly.

10. Remove 1 each of the E-rings [1] and the bearings [2] and then remove 2 belt driven roller assy /A [3].
11. Remove the E-ring [4] and the bearing [5] and then remove the belt driven roller assy /B [6].

12. Remove the E-ring [1] and remove the bearing [2].
 13. Remove the E-ring [3] and move the bearing [4] in the arrow-marked direction [5].
- Note**
- When removing/installing the E-ring, be sure not to convert the bearing support bracket [6].
14. Move the bearing [8] in the arrow-marked direction and then remove the belt driven roller assy /C [9] and 4 paper feed belts [10] from the belt support plate [11].
- Note**
- When reinstalling the paper feed belt [10], be sure to install it so that the white line mark comes to the inside.
15. Reinstall the preceding parts following the removal steps in reverse.

7.4 Vertical conveyance section

7.4.1 Replacing the pre-registration clutch /1 (CL1), /2 (CL3), /3 (CL5), the intermediate clutch /1 (CL2), /2 (CL4), and the horizontal conveyance exit clutch (CL6)

(1) Periodically replaced parts/cycle

- Pre-registration clutch /1 (CL1), /2 (CL3), /3 (CL5)
: Every 14,000,000 prints (Actual replacement cycle: Every 3,000,000 prints)
 - Intermediate clutch /1 (CL2), /2 (CL4)
: Every 14,000,000 prints (Actual replacement cycle: Every 3,000,000 prints)
 - Horizontal conveyance exit clutch (CL6)*
: Every 14,000,000 prints (Actual replacement cycle: Every 3,000,000 prints)
- * For PI-PFU: Every 4,000,000 prints (Actual replacement cycle: Every 3,000,000 prints)

(2) Procedure

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Disconnect the connectors [1], 1 each, and then remove the wiring harness from the wire binding band [2].
3. Remove each of the screws [3], 2 each, and the mounting metal fitting [4], 1 each.

a0gdt3c010ca

4. Remove 1 each of the bearings [1] and the washers [2], and then remove the pre-registration clutches /1 (CL1) [3], /2 (CL3) [4], and /3 (CL5) [5], the intermediate clutches /1 (CL2) [6], /2 (CL4) [7], and the horizontal conveyance exit clutch (CL6) [8].

Note

- When removing the bearing [1], the washer [2] is also removed. Be careful that the washer does not get lost.
- When reinstalling it, be sure to align the stopper [9] of the clutch with the notch [10].
- Do not press in the bearing [1] forcibly. When the bearing is perpendicular to the shaft [11], it can be installed smoothly. When it is slanting, it is not inserted smoothly.

5. Reinstall the preceding parts following the removal steps in reverse.

a0gdt3c011ca

7.4.2 Replacing the torque limiters /Up and /Lw

(1) Periodically replaced parts/cycle

- Torque limiter /Up, /Lw
- : Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Removing procedure of the vertical conveyance units /Up and /Lw

1. Remove the exit conveyance unit. (Refer to [F.7.5.1 Replacing PF paper exit roller, the bearings /C and /B for PF](#), and [F.7.6.1 Replacing the PF paper exit roller /2, the bearings /C and /B for PI-PFU](#))
2. Remove 2 connectors [1].
3. Remove 4 screws [2] and then remove the vertical conveyance unit /Up [3].

Note

- Be sure to avoid holding the vertical conveyance unit /Up at the paper-through section. This may deform the paper-through section and affect the paper through, thus resulting in a jam.
- Be sure to put the vertical conveyance unit /Up not to press the paper-through section [4].
- When reinstalling the vertical conveyance unit, be sure to align it with the positioning pin [5].

4. Disconnect the 3 connectors [1].
5. Remove 4 screws [2] and then remove the vertical conveyance unit /Lw [3].

Note

- Be sure to avoid holding the vertical conveyance unit /Lw at the paper-through section. This may deform the paper-through section and affect the paper through, thus resulting in a jam.
- When reinstalling the vertical conveyance unit, be sure to align it with the positioning pin [4].

6. Reinstall the preceding parts following the removal steps in reverse.

(3) Replacing procedure of the torque limiters /Up and /Lw

1. Remove the vertical conveyance units /Up and /Lw. ([F.7.4.2.\(2\) Removing procedure of the vertical conveyance units /Up and /Lw](#))
2. Remove 2 each of the screws [1] and then remove the torque limiter mounting bracket assy /Up [2] and /Lw [3].

3. Remove the E-ring [1], and then remove the torque limiter assy /Up and /Lw [3] from the mounting bracket [2].

Note

- Be sure that the installation positions to the mounting bracket are left-right reversal between the torque limiter assy /Up and the torque limiter assy /Lw.
 - The picture shows the torque limiter assy /Up.
 - Be careful not to confuse the torque limiters /Up and /Lw since the parts numbers are different.
- Torque limiter /Up: A03U8157##
Torque limiter /Lw: 57GA4430##

Note

- When reinstalling it, be sure to align the D-cut [1] to the straight line [2] of the shaft hole on the mounting bracket.

4. Remove the E-ring [1], pull out the bearing [2] and the gear [3] from the shaft [4], and then remove the torque limiters /Up and /Lw [5].
5. Reinstall the preceding parts following the removal steps in reverse.

7.4.3 Replacing the pre-registration roller, the intermediate conveyance roller, the pre-registration bearing, and the bearing C

(1) Periodically replaced parts/cycle

- Pre-registration roller, Intermediate conveyance roller
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)
 - Pre-registration bearing
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)
 - Bearing C
: Every 14,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)
 - Horizontal registration roller*, Horizontal registration bearing*
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)
- * For PI-PFU: Every 14,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Procedure for the vertical conveyance unit /Up

1. Remove the vertical conveyance unit /Up and then remove the torque limiter /Up. (Refer to [F.7.4.2 Replacing the torque limiters / Up and /Lw](#))
2. Remove 1 each of the E-rings [2] on 2 positions of the vertical conveyance units /Up [1] and then remove 1 each of the gears [3] and the pins [4].

3. Remove E-rings [1], 1 each for 4 places, and then remove the pre-registration bearing [2] and the horizontal registration bearing [3], 1 each, and also remove the pre-registration roller [4] and the horizontal registration roller [5].

Note

- When removing/installing it, be careful not to damage the pre-registration roller with the corner of the guide plate.

4. Remove the E-ring [1] and then remove the gear [2] and the pin [3].

5. Remove 1 each of 2 E-rings [1] and then remove 1 each of the bearing /C [2] and the intermediate conveyance roller [3].

Note

- When removing/installing it, be careful not to damage the intermediate conveyance roller with the corner of the guide plate.

6. Remove the E-ring [1] and remove the pin [4] by moving the gear [2] in the arrow-marked direction [3], and then remove the gear [2] from the intermediate conveyance roller [5].
7. Reinstall the preceding parts following the removal steps in reverse.

(3) Procedure for the vertical conveyance unit /Lw

1. Remove the vertical conveyance unit /Lw and then remove the torque limiter /Lw. (Refer to [F.7.4.2 Replacing the torque limiters / Up and /Lw](#))
2. Remove 2 screws [1] and then move the sensor mounting plate [2] after turning it back.
3. Remove 1 each of 2 E-rings [3] and then remove 1 each of the gears [4] and the pins [5].

4. Remove 1 each of 4 E-rings [1] and then remove 1 each of the pre-registration bearing [2] and 2 pre-registration rollers [3].

Note

- When removing/installing it, be careful not to damage the pre-registration roller with the corner of the guide plate.

5. Remove the E-ring [1] and then remove the gear [2] and the pin [3].
6. Loosen the screws [4], [5] and then remove the spring [6].

Note

- When reinstalling it, tighten the screw [5] first and then the screw [4] so that the tension of the spring [6] is over the belt [7], and then confirm the belt rotating smoothly.

7. Remove 2 E-rings [1] and then remove 2 collars [2], the belt [3], 2 pulleys [4] and 2 pins [5].

Note

- When reinstalling the collars [2], be sure that the stepped side faces to the E-ring side.

8. Remove E-rings [1], 1 each for 4 places and then remove the bearings /C [2], 1 each, and 2 intermediate conveyance rollers /2 and /3 [3].

Note

- When removing/installing it, be careful not to damage the intermediate conveyance roller with the corner of the guide plate.

9. Remove the E-ring [1] and remove the pin [4] by moving the gear [2] in the arrow-marked direction [3], and then remove the gear [2] from the intermediate conveyance roller /3 [5].
10. Reinstall the preceding parts following the removal steps in reverse.

7.5 Exit conveyance section (PF)**7.5.1 Replacing PF paper exit roller, the bearings /C and /B****(1) Periodically replaced parts/cycle**

- PF paper exit roller
: Every 14,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)
- Bearings /C and /B
: Every 14,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Removing procedure of the PF exit conveyance unit

1. Disconnect 2 connectors [1].
2. Remove 6 screws [2] and then remove the PF exit conveyance unit [3].

Note

- Be sure to avoid holding the PF exit conveyance unit at the paper-through section. This may deform the paper-through section and affect the paper through, thus resulting in a jam.
- When reinstalling it, be sure to put into 3 positioning pins [4].

3. Reinstall the preceding parts following the removal steps in reverse.

(3) Replacing procedure of the PF paper exit roller, the bearings /C and /B

a0gdt3c054ca

a0gdt3c055ca

1. Remove the PF exit conveyance unit. (Refer to [F.7.5.1.\(2\) Removing procedure of the PF exit conveyance unit](#))
2. Remove the E-ring [1] and then remove the collar [2], the belt [3], the pulley [4] and the pin [5].

3. Remove the E-ring [1] and remove the bearing /C [2].
4. Remove the E-ring [3] and then remove the bearing /B [4] and the PF paper exit roller [5].
5. Reinstall the preceding parts following the removal steps in reverse.

7.6 Exit conveyance section (PI-PFU)**7.6.1 Replacing the PF paper exit roller /2, the bearings /C and /B****(1) Periodically replaced parts/cycle**

- PF Paper exit roller /2
: Every 14,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)
- Bearings /C and /B
: Every 14,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Removing procedure of the PI-PFU exit conveyance unit (FA-501)

1. Remove the rear cover. (Refer to [G.4.2.3 Rear cover](#))
2. Disconnect the connector [1] and remove the wiring harness [3] from 2 wire saddles [2].

Note

- When reinstalling the wiring harness, be sure to set it with the wiring harness of FA-501 moved to the upper left [4] of the multi feed detection adjustment window.
- Be sure to set the wiring harness so that it does not contact the multi feed detection drive board (MFDDDB). Otherwise the multi feed detection error may occur.

a0gdt3c136ca

a0gdt3c056ca

3. Remove the left covers /Up and /Lw. (Refer to [G.4.2.13 Left cover / Up, /Lw \(PI-PFU only\)](#))
4. Disconnect 4 connectors [1].
5. Remove the screws [2].
6. Remove 2 screws [3], and then remove the mounting bracket [4].
7. Remove 5 screws [5] and then remove the PI-PFU exit conveyance unit [6].

Note

- Be sure to avoid holding the PF exit conveyance unit at the paper-through section. This may deform the paper-through section and affect the paper through, thus resulting in a jam.
- When reinstalling it, be sure to put into 2 positioning pins [7].

8. Reinstall the preceding parts following the removal steps in reverse.

(3) Replacing procedure of the PF paper exit roller, the bearings /C and /B

a0gdt3c057ca

1. Remove the PF exit conveyance unit. (Refer to [F.7.5.1.\(2\) Removing procedure of the PF exit conveyance unit](#))
2. Remove the E-ring [1] and then remove the collar [2], the belt [3], the pulley [4] and the pin [5].
3. Remove the E-ring [6] and then remove the collar [7] and the pulley [8].

a0gdt3c058ca

4. Remove 2 E-rings [1] and remove 2 bearings /B [2].
5. Remove 2 E-ring [3] and then remove 2 bearing /C [4] and the PF paper exit rollers [5] and /2 [6].
6. Reinstall the preceding parts following the removal steps in reverse.

7.7 Horizontal conveyance section**7.7.1 Replacing the horizontal conveyance rollers /A and /B, the spacer****(1) Periodically replaced parts/cycle**

- Horizontal conveyance roller /A*
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)
- Horizontal conveyance roller /B*
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)
- Spacer*
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

* The Periodically replaced cycle for PI-PFU is as follows.

- : Every 14,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

Note

- Be sure to replace only the 1st tandem of the coupling It does not need the replacement when using just 1 PF-703.

(2) Procedure

1. Remove the tray1. (Refer to [G.4.2.6 Tray](#))
2. Remove the tray front cover. (Refer to [G.4.2.5 Tray front cover](#))
3. Remove 4 screws [1] and then remove the connector mounting bracket [2].
4. Remove 2 screws [3].

5. Remove 8 screws [1] and lift the specified positions [3] of the tray unit [2], and then remove it from the horizontal conveyance unit [4].

⚠ Note:

- Be sure to lift the tray with 2 people.

Note

- Be sure to hold the specified positions [3] and not to hold the positions [5] that can be easily deformed. This may affect the paper tray, thus resulting in a jam.
- When reinstalling the slope, be sure to align 3 positioning projections [6].

6. Reinstall the preceding parts following the removal steps in reverse.

(3) Replacing procedure of the horizontal conveyance rollers /A and /B, the spacer

1. Remove the horizontal conveyance unit. (Refer to [F.7.7.1.\(2\) Procedure](#))
2. Disconnect the connector [1].
3. Remove 4 screws [2] and then remove the connector bracket [3].

Note

- When reinstalling it, be sure to install so that the top [4] of the connector bracket [3] is at the same height as the top [5] of the horizontal conveyance unit.

4. Remove the E-ring [1] and then remove the gear [2] and the pin [3].

5. Remove 1 each of 5 E-rings [1] and remove 5 spacers [2] and 5 bearings [3].

6. Remove the E-ring [1] and then remove the collar [2], the drive belt /1 [3], the pulley [4] and the pin [5].

7. Remove 2 E-rings [1] and remove the pin [4] by moving the coupling [2] in the arrow-marked direction [3], and then remove the coupling [2], the collar [5], the pulley [6], and the pin [7].

Note

- Note that the lengths of the pin [4] and [7] are different and the [4] is longer.
- When reinstalling the coupling, be sure to align the pin [4] to the groove [8].

8. Remove 1 each of 2 E-rings [1] and then remove 2 spacers [2], 2 bearings [3], and the horizontal conveyance rollers /A [4] and /B [5].

9. Remove 1 each of 2 E-rings [1] and then remove 2 collars [2], the drive belts /1 [3] and /2 [4], 2 pulleys [5], and 2 pins [6].

Note

- Be sure that the length of the drive belt /1 [3] and /2 [4] is different and the /1 [3] is longer.

10. Remove 2 E-rings [1] and then remove the pin [5] by moving the collar [2] and the pulley [3] in the arrow-marked direction [4].
11. Remove the E-ring [6] and then remove the pin [9] by moving the collar [7] and the pulley [8] in the arrow-marked direction [4].

12. Remove the E-ring [1].
13. Remove the E-ring [2] and then remove the pin [6] by moving 2 collar [3] and 2 pulley [4] in the arrow-marked direction [5].

Note

- When reinstalling the coupling, be sure to align the pin [6] to the groove [7].

14. Remove the spacer [8], the bearing [9], and the horizontal conveyance roller /A [10].

15. Remove 1 each of 2 E-rings [1] and then remove 2 spacers [2], 2 bearings [3], and 2 horizontal conveyance rollers /B [4].
16. Reinstall the preceding parts following the removal steps in reverse.

7.8 ENTRANCE CONVEYANCE SECTION

7.8.1 Replacing the entrance conveyance roller /Up, the spacer (in the case of PI-PFU)

(1) Periodically replaced parts/cycle

- Entrance conveyance roller /Up, Spacer
- : Every 14,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Removing procedure of the entrance conveyance unit

a0gdt3c066ca

1. Remove the right cover. (Refer to [G.4.2.2 Right cover](#))
2. Remove 6 screws [1] and then remove the entrance conveyance unit.
3. Reinstall the preceding parts following the removal steps in reverse.

(3) Replacing procedure of the entrance conveyance roller /Up, the spacer

a0gdt3c067ca

1. Remove the entrance conveyance unit. (Refer to [F.7.8.1.\(2\) Removing procedure of the entrance conveyance unit](#))
2. Remove 4 screws [1] and then remove the entrance guide plate /1 [2].
3. Remove the E-ring [3] and then remove the gear [4] and the spacer [5].

a0gdt3c068ca

4. Remove 2 screws [1] and remove 4 screws [2], and then remove the entrance guide plate /2 [3].

a0gdt3c069ca

5. Remove the E-ring [1].
6. Remove 1 each of 2 E-rings [2] and remove 1 each of the spacers [3] and the bearings [4], and then remove the entrance conveyance roller /Up [5].
7. Reinstall the preceding parts following the removal steps in reverse.

7.8.2 Replacing the entrance conveyance roller /Lw, the spacer (in the case of PF)

(1) Periodically replaced parts/cycle

- Replacing the entrance conveyance roller /Lw, the spacer (in the case of PF)
: Every 24,000,000 prints (Actual replacement cycle: Every 6,000,000 prints)

Note

- Be sure to replace only the 1st tandem of the coupling It does not need the replacement when using just 1 PF-703.

(2) Procedure

1. Remove the right cover. (Refer to [G.4.2.2 Right cover](#))
2. Remove the entrance conveyance roller unit. (Refer to [F.7.8.1 Replacing the entrance conveyance roller /Up, the spacer \(in the case of PI-PFU\)](#))
3. Remove the entrance guide plates /1 and /2. (Refer to [F.7.8.1 Replacing the entrance conveyance roller /Up, the spacer \(in the case of PI-PFU\)](#))
4. Remove the E-ring [1] and then remove the gear [2] and the pin [3].
5. Remove the E-ring [4] and then remove the spacer [5] and the bearing [6].
6. Remove the E-ring [7] and then remove the gear [8] and the pin [9].
7. Remove the E-ring [10] and then remove the spacer [11], the bearing [12], and the entrance conveyance roller /Lw [13].
8. Reinstall the preceding parts following the removal steps in reverse.

8. PERIODICAL MAINTENANCE PROCEDURE PF-706/PP-701

8.1 Precautions on maintenance

⚠ Note

- Be sure to unplug the power plug from the power outlet.

Note

- The gear [2] with the pin [1] is attached on every drive sections of DF-706. Do not wipe off the grease that is applied to the groove receiving the pin [3] when removing and attaching the gear.

8.2 Tray section

8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy

Note

- The removing/reinstalling methods of the pick-up roller assy and the separation roller assy are the same for all of the tray1, 2 and 3. The explanation here is given for tray1.
- After completion of installation, be sure to rotate the pick-up roller in the paper feed direction (clockwise as seen from the front side) to check to see if the paper feed roller and the belt rotate smoothly. The rotation is restricted only in the paper feed direction (clockwise as seen from the front side) and be careful not to rotate the roller counterclockwise.
- Be careful that the pick-up roller assy and the separation roller assy are different in the direction for the main body and for the PF.

(1) Procedure

pf701fs2001c

a0gct3c001ca

1. Open the front door [1].
2. Insert a driver into the hole [2] and pull out the tray [4] while lifting up a little the tray lock lever [3].

3. Rotate the pick-up roller [1] in the direction of the arrow (clockwise as seen from the front side) and bring the coupling [2] to the lengthwise direction.

Note

- The rotation of the pick-up roller [1] is restricted only to the arrow-marked direction (clockwise). It does not rotate in the reverse direction (counterclockwise). So, be sure not to turn it in this direction forcibly.

4. Remove 2 C-clips [3].

5. Remove the bearing /Fr [1].
6. Move the bearing /Rr [2] to the rear side.

Note

- When installing the bearing, press down a little the metal frame [3] of the pick-up roller assy and insert the flat section [4] of the bearing /Rr [2] into the notched section [5] of the metal frame while the flat section [4] of the bearing being held in a horizontal position. Then insert the bearing /Fr [1] in the same manner.

a08rf2c002ca

7. Hold the pick-up roller assy [1] by hand and lift and tilt the paper feed roller [3] so that it rotates on the shaft [2] of the pick-up roller to remove it from the notch of the bearing [4] and the coupling [5].

Note

- When removing the pick-up roller [1], be careful not to damage the sensor [7] with the metal frame [6].

a08rf2c003ca

a08rf2c004ca

[2]

a0gct3c002ca

[2]

a0gct3c003ca

8. Remove the pick-up roller shaft [2] from the arm [1] of the paper feed guide plate and then remove the pick-up roller assembly [3].

9. Remove 2 C-clips [1] and remove the entrance guide plate [2].

10. Remove the C-clip [1].
11. Remove the separation roller [3] together with the shaft from the notch [2].

a0gct3c004ca

a0gct3c005ca

12. Remove 2 screws [1].

Note

- When replacing only the separation roller, do not conduct this step.

13. Pull out the front side of the separation roller assy [1] in the arrow-marked direction, and then remove the coupling pin [2] in the rear from the joint [3].

Note

- When reinstalling it, be sure to engage the coupling pin [2] with the joint [3] before installation.
- When reinstalling it, fasten it with the screws while pressing down the separation roller assembly [1].

14. Reinstall the above parts following the removal steps in reverse.

Note

- After completion of installation, be sure to raise the pick-up roller a little and rotate it clockwise as seen from the front side to check to see if the paper feed roller and the belt rotate smoothly. (The direction of rotation is available only in the paper feed direction (clockwise as seen from the front side) and be careful not to rotate it counterclockwise.)

8.2.2 Replacing the pick-up roller and the paper feed roller

(1) Periodically replaced parts/cycle

- Pick-up roller
 - : Every 3,000,000 prints (Actual replacement cycle: Every 500,000 feeds) *1
 - : Every 2,250,000 prints (Actual replacement cycle: Every 500,000 feeds) *2
- Paper feed roller
 - : Every 3,000,000 prints (Actual replacement cycle: Every 500,000 feeds) *1
 - : Every 2,250,000 prints (Actual replacement cycle: Every 500,000 feeds) *2

*1 When connected to 1250/1250P/1052

*2 When connected to 951

(2) Procedure

Note

- The outward appearance of the collar is identical for the paper feed roller and the separation roller. However, the collar of the paper feed roller has a one-way mechanism on the inside while the collar of the separation roller does not. Be careful not to confuse one with the other.

a08rf2c005ca

1. Remove the pick-up roller assembly. (Refer to [F.8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
2. Remove the C-clip [1] of the pick-up roller assy.
3. Slide 2 bearings [2] and remove the pick-up roller [3] together with the shaft [4].

4. Remove the bearing [1] and pull out the pick-up roller [2] from the shaft [3].
5. Remove the pick-up roller from the collar [4].
6. Replace the pick-up roller.
7. Remove the C-clip [1] and pull out the bearing /Fr [2] from the shaft [3].
8. Slide the bearing /Rr [4] and remove the paper feed roller [5] together with the shaft [3].
9. Remove the C-clip [1].
10. Pull out the paper feed roller [3] from the collar [2].
11. Replace the pick-up roller [3].
12. Reinstall the preceding parts following the removal steps in reverse.

Note

- The external view of the collar is the same for the paper feed roller and the separation roller. However, there is a one-way mechanism provided on the inside of the collar [1] for the paper feed roller while no one-way mechanism is provided for the separation roller collar [2], be careful not to confuse one with the other.

8.2.3 Replacing the separation roller**(1) Periodically cleaned parts/cycle**

- Separation roller
 - : Every 3,000,000 prints (Actual replacement cycle: Every 500,000 feeds)*₁
 - : Every 2,250,000 prints (Actual replacement cycle: Every 500,000 feeds)*₂

*₁ When connecting to 1250/1250P/1052

*₂ When connecting to 951

(2) Procedure**Note**

- The outward appearance of the collar is identical for the paper feed roller and the separation roller. However, the collar of the paper feed roller has a one-way mechanism on the inside while the collar of the separation roller does not. Be careful not to confuse one with the other.

1. Remove the separation roller together with the shaft. (Refer to [F. 8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
2. Remove the C-clip [1].
3. Pull out the shaft [2] in the arrow-marked direction to remove the gear [3] and collar [4].
4. Replace the pick-up roller.
5. Reinstall the preceding parts following the removal steps in reverse.

Note

- The outward appearance of the collar is identical for the paper feed roller and the separation roller. However, the collar of the paper feed roller [5] has a one-way mechanism on the inside while the collar of the separation roller [6] does not. Be careful not to confuse one with the other.

8.2.4 Replacing the paper dust removing brush**(1) Periodically cleaned parts/cycle**

- Paper fur brush
 - : Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*1}
 - : Every 18,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*2}

^{*1} When connected to 1250/1250P/1052

^{*2} When connected to 951

(2) Procedure

1. Remove the pick-up roller and paper feed roller from the pick-up roller assy. (Refer to [F.8.2.2 Replacing the pick-up roller and the paper feed roller](#))
2. Remove 2 C-clips [1] and then remove 2 gears [2].
3. Remove the gear [3].
4. Remove the E-ring [4] and move 2 bearings [5] to remove the shaft [6].

a08rf2c018ca

5. Remove 2 bearings [1] and remove the paper fur brush [2].
6. Replace the paper dust removing brush [2].
7. Reinstall the preceding parts following the removal steps in reverse.

8.2.5 Replacing the paper feed clutch, the separation clutch and the forced separation clutch

(1) Periodically replaced parts/cycle

- Paper feed clutch /1 (CL6), /2 (CL9), /3 (CL12)
 - : Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*1}
 - : Every 18,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*2}
- Separation clutch /1 (CL7), /2 (CL10), /3 (CL13)
 - : Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*1}
 - : Every 18,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*2}
- Forced separation clutch /1 (CL8), /2 (CL11), /3 (CL14)
 - : Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*1}
 - : Every 18,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*2}

^{*1} When connected to 1250/1250P/1052

^{*2} When connected to 951

(2) Procedure

a0gct3c013ca

1. Remove the stopper screw of the tray and pull out the tray. (Refer to [G.5.2.6 Tray](#))
2. Disconnect 3 connectors [1] and remove 4 wire binding bands [2].
3. Remove 3 C-clips [3] and then remove the paper feed clutch (CL6/CL9/CL12) [4], the separation clutch (CL7/CL10/CL13) [5] and the forced separation clutch (CL8/CL11/CL14) [6].

Note

- When reinstalling it, be sure to engage the stopper of the clutch to the pin [7] and the projection of the metal frame [8].

4. Reinstall the preceding parts following the removal steps in reverse.

8.2.6 Replacing the torque limiter /A and the cover

(1) Periodically replaced parts/cycle

- Torque limiter /A
 - : Every 40,000,000 prints^{*1}

- : Every 30,000,000 prints *2
- Cover
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 When connected to 1250/1250P/1052

*2 When connected to 951

(2) Procedure

1. Remove the pick-up roller assembly. (Refer to [F.8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
2. Remove the separation roller assy. (Refer to [F.8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
3. Remove the separation roller. (Refer to [F.8.2.3 Replacing the separation roller](#))
4. Remove the C-clips [1] and the screw [2], and then remove the cover [3].

5. Remove the E-ring [1], and remove 2 washers [2] and the gear [3].

6. Remove the E-ring [1] and move the shaft [2] in the arrow-marked direction [3].
7. Move the torque limiter /A [4] in the arrow-marked direction.

a0gct3c007ca

8. Remove the pin [1], and pull out the shaft [2] to remove the gear [3] and torque limiter /A [4].
9. Reinstall the preceding parts following the removal steps in reverse.

8.2.7 Replacing the idler shaft and the bearing /E

(1) Periodically replaced parts/cycle

- Idler shaft
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Bearing /E
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

*1 When connected to 1250/1250P/1052

*2 When connected to 951

(2) Procedure

[3] [2] [1] a0gct3c010ca

1. Remove the pick-up roller assembly. (Refer to [F.8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
2. Remove the separation roller assy. (Refer to [F.8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
3. Remove the separation roller. (Refer to [F.8.2.3 Replacing the separation roller](#))
4. Remove the torque limiter /A and the cover. (Refer to [F.8.4.2 Replacing the torque limiters /Up and /Lw](#))
5. Remove the E-ring [1] and remove the washer [2] and the bearing /E [3].

6. Remove the E-ring [1] and then remove the gear [2] and the pin [3].

Note

- When removing the gear [2], be careful not to drop the pin [3].

7. Remove 3 E-rings [1], and remove the washer [2], the bearing /E [3] and the gear [4] from the idler shaft [5].
8. Reinstall the preceding parts following the removal steps in reverse.

8.3 Separation section

8.3.1 Replacement procedure of the parts at the separation section

(1) Periodically replaced parts/cycle

- Input shaft
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Bearing /D
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Reverse rotation shaft
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Bearing /C
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Reverse input shaft
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2

- Bearing /E
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Input gear
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 prints) *1
 - : Every 30,000,000 prints (Actual replacement cycle: Every 6,000,000 prints) *2

*1 When connected to 1250/1250P/1052

*2 When connected to 951

(2) Procedure

1. Remove the tray. (Refer to [G.5.2.6 Tray](#))
2. Remove the pick-up roller assembly. (Refer to [F.8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
3. Remove the separation roller assy. (Refer to [F.8.2.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
4. Remove the paper feed clutch, the separation clutch and the forced separation clutch. (Refer to [F.8.2.5 Replacing the paper feed clutch, the separation clutch and the forced separation clutch](#))
5. Remove 3 screws [1] and remove the paper feed cover [2].
6. Remove 2 screws [3] and remove the separation cover [4].
7. Remove 6 screws [5] and remove the motor cover [6].

8. Remove 3 screws [1] and remove the input shaft assy [2], the bearing /D [3] and the washer [4].

9. Remove 2 E-rings [1], and remove the input gear [2] and the pin [3].

Note

- When removing the input gear [2], be careful not to drop the pin [3].

10. Remove 2 E-rings [1], and remove the bearing /D [2], the mounting plate [3], the spring [4], the coupling [5] and the pin [6] from the input shaft [7].

11. Remove 2 E-rings [1], and remove the washer [2] and the bearing / D [3].
12. Move the reverse rotation shaft assy [4] in the arrow-marked direction to remove it from the notch [5].

13. Remove the washer [1] and the bearing /C [2].
14. Remove the screw [3] and remove the coupling [4].
15. Remove the E-ring [5] from the reverse rotation shaft [6].

16. Remove 2 E-rings [1], and remove the washer [2] and the bearing / D [3].
17. Move the reverse rotation shaft assy /4 [5] in the arrow-marked direction to remove it from the notch [4].

18. Remove 2 E-rings [1], and remove the washer [2], the bearing /E [3], the gear [4] and the pin [5] from the reverse input shaft [6].

Note

- When removing the gear [4], be careful not to drop the pin [5].

19. Reinstall the preceding parts following the removal steps in reverse.

8.4 Conveyance section

8.4.1 Replacing the pre-registration clutches /1 (CL1), /2 (CL3) and /3 (CL5) and the intermediate clutches /Up (CL2) and /Lw (CL4)

(1) Periodically replaced parts/cycle

- Pre-registration clutch /1 (CL1), /2 (CL3), /3 (CL5)
 - : Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*1}
 - : Every 18,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*2}
- Intermediate clutch /Up (CL2) and /Lw (CL4)
 - : Every 20,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*1}
 - : Every 18,000,000 prints (Actual replacement cycle: Every 3,000,000 feeds)^{*2}

^{*1} When connected to 1250/1250P/1052

^{*2} When connected to 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.5.2.3 Rear cover](#))
2. Disconnect the connectors [1], 1 each, and then remove the wiring harness from the wire binding band [2].
3. Remove each of the screws [3], 2 each, and the mounting metal fitting [4], 1 each.

4. Remove the bearings [1], 1 each, and the washers [2], 1 each. Then remove the pre-registration clutch /1 (CL1) [3], the intermediate clutch /Up (CL2) [4], the pre-registration clutch /2 (CL3) [5], the intermediate clutch /Lw (CL4) [6] and the pre-registration clutch /3 (CL5) [7].

Note

- When removing the bearing [1], the washer [2] may be also removed together. Be careful not to lose it.
- When reinstalling it, be sure to align the stopper [8] of the clutch with the notch [9].
- Do not insert the bearing [1] forcibly. When the bearing is perpendicular to the shaft [10], it can be installed smoothly. When it is slanting, it is not inserted smoothly.

5. Reinstall the preceding parts following the removal steps in reverse.

8.4.2 Replacing the torque limiters /Up and /Lw**(1) Periodically replaced parts/cycle**

- Torque limiter /Up, /Lw
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)*¹
 - : Every 30,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)*²

*¹ When connected to 1250/1250P/1052

*² When connected to 951

(2) Procedure

1. Remove the following units.
 - Conveyance exit unit (Refer to [G.5.2.11 Conveyance exit unit](#))
 - Vertical conveyance units /Up and /Lw (Refer to [G.5.2.12 Vertical conveyance units /Up and /Lw](#))
2. Remove the 4 screws, 2 for each of the vertical conveyance unit/ Up [1] and /Lw [2], and remove the torque limiter assy [4] from each unit.

3. Remove the E-ring [1], and then remove the torque limiters /Up and /Lw [3], 1 each, together with the shaft [4] from the mounting bracket [2].

Note

- When attaching the torque limiters /Up and /Lw [3] to the mounting bracket [2], be sure to attach it in the correct orientation since the orientation for the vertical conveyance unit /Up is opposite to the orientation for the vertical conveyance unit /Lw.
- The left picture shows the torque limiter and the mounting bracket of the vertical conveyance unit/Up.

4. Remove the E-ring [1].

5. Pull out the bearing [1] and the gear [2] from the shaft [3] and remove the torque limiters /Up and /Lw [4], 1 each.
6. Replace the torque limiters /Up and /Lw [4], 1 each.
7. Reinstall the preceding parts following the removal steps in reverse.

8.4.3 Replacing the pre-registration roller and the registration bearing**(1) Periodically replaced parts/cycle**

- Pre-registration roller
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*1}
 - : Every 30,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*2}
- Pre-registration bearing
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*1}
 - : Every 30,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*2}

^{*1} When connected to 1250/1250P/1052

^{*2} When connected to 951

(2) Procedure

1. Remove the following units.
 - Conveyance exit unit (Refer to [G.5.2.11 Conveyance exit unit](#))
 - Vertical conveyance units /Up and /Lw (Refer to [G.5.2.12 Vertical conveyance units /Up and /Lw](#))
2. Disconnect the connector [1], and remove the wiring harness from 2 wire binding bands [2]. Remove 2 screws [3] and remove the pre-registration sensor /3 mounting plate [4].

3. Remove the E-rings [4], 1 each, of the pre-registration rollers /4 [2] and /5 [3] of the vertical conveyance unit /Lw and the pre-registration roller /3 [1] of the vertical conveyance unit /Up respectively, and then remove the gears [5], 1 each, and the pin [6], 1 each.

4. Remove the E-rings [1], 2 each, provided on both sides of each pre-registration rollers and then remove the pre-registration bearings [2], 2 each.
5. Remove the pre-registration roller [3].
6. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling it, be careful not to damage the pre-registration roller with the corner of the guide plate.

8.4.4 Replacing the intermediate conveyance roller and the bearing /C**(1) Periodically replaced parts/cycle**

- Intermediate conveyance roller
 - : Every 40,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*1}
 - : Every 30,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*2}
- Bearing /C
 - : Every 40,000,000 prints^{*1}
 - : Every 30,000,000 prints^{*2}

^{*1} When connected to 1250/1250P/1052

*2 When connected to 951

(2) Procedure

1. Remove the following units.
 - Conveyance exit unit (Refer to [G.5.2.11 Conveyance exit unit](#))
 - Vertical conveyance units /Up and /Lw (Refer to [G.5.2.12 Vertical conveyance units /Up and /Lw](#))
2. Remove the torque limiter assy, 1 each, from the vertical conveyance unit /Up and /Lw. (Refer to [F.8.4.2 Replacing the torque limiters /Up and /Lw](#))
3. Remove the E-rings [3], 1 each, of the vertical conveyance units / Up [1] and /Lw [2] and then remove the gears [4], 1 each, and the pin [5], 1 each.

4. Remove the screw [1].
5. Loosen the screw [2].
6. Remove the E-ring [3], 1 each, of the conveyance rollers /1, /2, /3 and /4, and then remove the collar [4].

Note

- The collar [4] is distinguished between the front and the rear. Be sure to install it with the stepped side outside.

7. Remove the pulley [2], the pin [3] and the belt [4] while lifting up the tension roller [1].

Note

- When installing it, be sure to tighten it depending on the tension of the spring and rotate the conveyance roller to check that the belt rotates smoothly.

pf701fs2023c

8. Remove the E-rings [1], 2 each, provided on both sides of each of the conveyance rollers, and then remove the bearings /C [2], 2 each, and the intermediate conveyance roller [3].
9. Reinstall the preceding parts following the removal steps in reverse.

8.4.5 Replacing the PF paper exit roller and the bearings /B and /C

(1) Periodically replaced parts/cycle

- PF paper exit roller
 - : Every 10,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*1}
 - : Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 prints)^{*2}
- Bearing /C
 - : Every 10,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*1}
 - : Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 prints)^{*2}
- Bearing /B
 - : Every 10,000,000 prints (Actual replacement cycle: Every 6,000,000 feeds)^{*1}
 - : Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 prints)^{*2}

^{*1} When connected to 1250/1250P/1052

^{*2} When connected to 951

(2) Procedure

pf701fs2024c

1. Remove the exit conveyance unit. (Refer to [G.5.2.11 Conveyance exit unit](#))
2. Remove the E-ring [1] and then remove the collar [2], the pulley [3], the pin [4] and the belt [5].

pf701fs2025b

3. Remove the E-rings [2], 1 each, provided on both sides of the PF paper exit roller [1], and then remove the bearings /C [3] and /B [4].
4. Remove the PF paper exit roller [1].
5. Reinstall the preceding parts following the removal steps in reverse.

8.5 Drive section

8.5.1 Parts replacement procedure of the drive section

(1) Periodically replaced parts/cycle

- Shaft assy /P
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints *2
- Pulley /P
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints *2
- Shaft assy /C
 - : Every 40,000,000 prints *1
 - : Every 30,000,000 prints *2
- Gear /C
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints *2
- Paper feed pulley
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints *2
- Idler pulley /D
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints *2

*1 When connected to 1250/1250P/1052

*2 When connected to 951

(2) Procedure

a0gct3c023ca

1. Remove the rear cover. (Refer to [G.5.2.3 Rear cover](#))
2. Remove the pre-registration clutches /1 (CL1), /2 (CL3) and /3 (CL4) and the intermediate clutches /Up (CL2) and /Lw (CL5). (Refer to [F.8.2.5 Replacing the paper feed clutch, the separation clutch and the forced separation clutch](#))
3. Disconnect 9 connectors [1].
4. Remove 3 screws [2] and 10 screws [3], and then remove the gear mounting plates /1 [4], /2 [5] and /3 [6].

Note

- When removing the gear mounting plates /1 [4], /2 [5] and /3 [6], be careful not to remove the bearing [7] together and drop it.

5. While pulling the shaft assy /P [1] toward you, loosen the belt [2] and remove the shaft assy /P [1] together with the bearing.
6. Remove 2 shaft assys /C [3] in the same manner.

Note

- When removing the shaft assys /P [1] and /C [3], be careful not to drop any part such as bearings.

7. Remove the bearing [2] and the washer [3] from the shaft assy /P [1].
8. Remove 4 E-rings [4], and remove the collar [5], the paper feed pulley [6], 2 pins [7], the pulley /P [8], the washer [9] and the bearing [10] from the shaft assy /P [1].

Note

- When removing the paper feed pulley [6] and the pulley /P [8], be careful not to drop and lose the pin [7].
- Do not wipe off the grease that applied to the groove which receives the pin [4].

9. Remove the bearing [2] and the washer [3] from the shaft assy /C [1].
10. Remove 4 E-rings [4], and remove the collar [5], 2 paper feed pulleys [6], 3 pins [7], the gear /C [8], the washer [9] and the bearing [10] from the shaft assy /C [1].

Note

- When removing the paper feed pulley [6] and the gear /C [8], be careful not to drop and lose the pin [7].

11. Remove 4 E-rings [1] and remove 4 idler pulleys /D [2] together with the bearings.

Note

- Be careful not to drop the washer and the collar behind the bearing.

12. Remove 2 bearings [1] and remove the idler pulley /D [2].
13. Reinstall the preceding parts following the removal steps in reverse.

8.5.2 Replacing the paper feed drive pulley

(1) Periodically replaced parts/cycle

- Paper feed drive pulley
 - : Every 40,000,000 prints*1
 - : Every 30,000,000 prints*2

*1 When connected to 1250/1250P/1052

*2 When connected to 951

(2) Procedure

1. Remove the rear cover. (Refer to [G.5.2.3 Rear cover](#))
2. Remove 4 screws [1] and remove the gear mounting plate /4 [2].

3. Remove the E-ring [1] and remove the pin [2] and the paper feed drive pulley [3].
4. Reinstall the preceding parts following the removal steps in reverse.

Note

- When removing the paper feed pulley [3], be careful not to drop the pin [2].

8.6 PP-701**8.6.1 Replacing the pick-up roller and the paper feed roller****(1) Periodically replaced parts/cycle**

- Pick-up roller
: Spotted replacement (Actual replacement cycle: Every 50,000 feeds)
- Paper feed roller
: Spotted replacement (Actual replacement cycle: Every 50,000 feeds)

(2) Procedure**Note**

- The outward appearance of the collar is identical for the paper feed roller and the separation roller. However, the collar of the paper feed roller has a one-way mechanism on the inside while the collar of the separation roller does not. Be careful not to confuse one with the other.

1. Conduct the steps 1 to 3 in the [F.8.2.2 Replacing the pick-up roller and the paper feed roller](#)
2. Remove the C-clip [1] and remove the pick-up roller [2].

3. Pull out the collar [2] from the pick-up roller [1].
4. Replace the pick-up roller [1].
5. Conduct the steps 7 to 12 in the [F.8.2.2 Replacing the pick-up roller and the paper feed roller](#) and replace the paper feed roller.

8.6.2 Replacing the separation roller

(1) Periodically replaced parts/cycle

- Separation roller
: Spotted replacement (Actual replacement cycle: Every 50,000 feeds)

(2) Procedure

Note

- The outward appearance of the collar is identical for the paper feed roller and the separation roller. However, the collar of the paper feed roller has a one-way mechanism on the inside while the collar of the separation roller does not. Be careful not to confuse one with the other.

1. Conduct the steps 1 to 4 in the [F.8.2.3 Replacing the separation roller](#) and replace the separation roller.

9. PERIODICAL MAINTENANCE PROCEDURE LU-409/410

9.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

9.2 Paper feed section

9.2.1 Cleaning the paper dust removing brush

(1) Procedure

1. Remove the upper door [1]. (Refer to [G.6.2.2 Upper door](#))
2. Remove 6 screws [2] and remove the paper feed cover [3].

3. Release the protruding portions at 2 places of the paper dust removing brush [1], tilt them to the pre-registration roller [3] side, and remove the paper dust removing brush [1].

Note

- When reinstalling them, be sure to tilt them to the pre-registration roller [3] side before inserting them

4. Clean the paper exit sensor with the blower brush.
5. Reinstall the above parts following the removal steps in reverse.

9.2.2 Removing/installing paper feed roller unit

(1) Procedure

1. Open the upper door [1].
2. Remove the hook [3] of spring [2] from the paper feed guide plate [4].

3. Remove C-clips [1] 1 each.
4. Slide the bearings [2] 1 each.
5. Remove the coupling [5] while removing the notch [3] and the arm [4] of paper feed guide plate, and remove the paper feed roller unit [6].

Note

- When removing/installing, be careful not to damage the upper limit sensor (PS109) [7] and the paper empty sensor (PS108) [8].

6. Reinstall the above parts following the removal steps in reverse.

9.2.3 Replacing the paper feed roller/pick-up roller**(1) Periodically replaced parts/cycle**

- Paper feed roller
: Every 7,500,000 prints (Actual replacement cycle: Every 500,000 prints)
- Pick-up roller
: Every 7,500,000 prints (Actual replacement cycle: Every 500,000 prints)

(2) Procedure

1. Remove the paper feed roller unit. (Refer to [F.9.2.2 Removing/ installing paper feed roller unit](#))
2. Turn over the paper feed roller unit, and remove 1 bearing [1] and the actuator [2].
3. Remove the 3 C-clips [2], and remove the coupling bearing [4].

4. Slide the coupling bearing [1] and remove the mounting bracket [2].
5. Remove the C-clip [3].

6. Pull out the paper feed roller [1] from the shaft [2] and the collar [3].
7. Pull out the pick-up roller [5] with the collar [6] from the shaft [7].
8. Remove the collar [6] from the pick-up roller [5].

Note

- When installing the paper feed roller [1], insert it into the collar [3] with its paint-marked side [4] ahead.
- When reinstalling the pick-up roller [5], be sure to insert the collar [6] into the groove [8] side before inserting it into the shaft [7].

9. Reinstall the preceding parts following the removal steps in reverse.

9.2.4 Replacing the separation roller and the torque limiter**(1) Periodically replaced parts/cycle**

- Separation roller
: Every 7,500,000 prints (Actual replacement cycle: Every 500,000 prints)
- Torque limiter
: Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Procedure**Note**

- Be sure to press the tray down switch (SW100) while charging to lower the paper lift plate to the bottom before operation.

1. Remove the paper feed roller unit. (Refer to [F.9.2.2 Removing/ installing paper feed roller unit](#))
2. Remove 2 screws [1] and then remove the entrance guide plate [2].

3. Remove 2 screws [1] and pull out the front side of the separation roller unit [2] in advance. And then remove the coupling [3] to dismount the separation roller.

Note

- When reinstalling it, be sure to engage the coupling [3] for installation and fasten the separation roller unit [2] with screws while pressing it downward.

15ssf2c010na

[4]

[1] [2] [3]

15ssf2c011na

4. Remove 2 C-clips [1] and then, with the shaft [2] and the D cut section [3] set together, remove the separation roller [4] together with the shaft [2].

Note

- When removing and reinstalling it, be careful not to damage the transparent protective cover [5].

5. Pull out and remove the separation roller [1] from the collar [2] and the shaft [3].

Note

- When reinstalling the separation roller, be sure to insert it into the collar [2] from the paint-marked [4] side.
- Be sure to check to see if the surface of the separation roller is not smeared with grease.

6. Remove the screw [1].
7. Remove 2 E-rings [2] and remove 2 bearings [3].
8. Remove the pin [4] and pull out the shaft [5] in the arrow-marked direction.
9. Remove the torque limiter [6].

Note

- The 2 spacers [7] drop when the shaft [5] is pulled out in the arrow-marked direction. Be careful not to lose them.

10. Reinstall the preceding parts following the removal steps in reverse.

9.2.5 Replacing paper feed clutch (CL101) /pre-registration clutch (CL102)

(1) Periodically replaced parts/cycle

- Paper feed clutch (CL101)
: Every 3,000,000 prints (Actual replacement cycle: Every 3,000,000 prints)
- Pre-registration clutch (CL102)
: Every 3,000,000 prints (Actual replacement cycle: Every 3,000,000 prints)

(2) Procedure

LU-409

1. Open the upper door [1].
2. Remove the 3 screws [2] in case of LU-409 and remove the 2 screws [2] in case of LU-410 and remove the clutch cover [3] in the arrow-marked direction.

LU-410

3. Remove 2 connectors [1].
4. Remove the 2 C-clips [2], and remove the paper feed clutch (CL101) [3] and the separation clutch (CL102) [4].

Note

- When installing, be sure to insert the stoppers [5] of the clutches over the screw [6] and the metal plate [7].

5. Reinstall the preceding parts following the removal steps in reverse.

9.2.6 Replacing the pre-registration roller and the pre-registration bearing**(1) Periodically replaced parts/cycle**

- Pre-registration roller
: Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 prints)
- Pre-registration bearing
: Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Procedure

1. Remove the following parts.
 - Upper door (Refer to [G.6.2.2 Upper door](#))
 - Right cover (Refer to [G.6.2.3 Right cover](#))
 - Front cover (Refer to [G.6.2.4 Front cover](#))
 - Front door (Refer to [G.6.2.6 Front door](#))
 - Paper feed cover, paper dust removing brush (Refer to [F.9.2.1 Cleaning the paper dust removing brush](#))
 - Clutch cover, pre-registration clutch (Refer to [F.9.2.5 Replacing paper feed clutch \(CL101\) /pre-registration clutch \(CL102\)](#))
2. Remove 2 screws [1], and then remove the upper cover /Fr [2].

3. Remove 3 screws [1] and then remove the connector mounting bracket [2].

Note

- Be sure not to pull the sensor mounting piece [2] too hard since it is connected with a wiring.

4. Remove the 2 connectors [1], the fastons [2] and [3], and the wiring [4]. And then remove the sensor mounting piece [5].

Note

- When installing the fastons [2] and [3], be sure to insert the orange cord [2] into the pin provided at the center of the front door interlock switch (MS101) [6].

5. Remove the 3 E-rings [1] and the pre-registration bearings [2] and [3], and then remove the pre-registration roller [4].

Note

- When removing it, be careful that the rubber pad [5] does not get lost. And be sure to insert the rubber pad between the bearing [2] and the metal frame [6] after installing the pre-registration roller.
- When installing the pre-registration roller, be careful not to damage it with the edge of the metal frame.

6. Reinstall the preceding parts following the removal steps in reverse.

9.2.7 Replacing paper feed idler gear/paper feed input gear

(1) Periodically replaced parts/cycle

- Replacing paper feed idler gear
: Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 prints)
- Paper feed input gear
: Every 10,500,000 prints (Actual replacement cycle: Every 6,000,000 prints)

(2) Procedure

1. Remove the following parts.
 - Upper door (Refer to [G.6.2.2 Upper door](#))
 - Right cover (Refer to [G.6.2.3 Right cover](#))
 - Rear cover (Refer to [G.6.2.5 Rear cover](#))
 - Paper feed cover (Refer to [F.9.2.1 Cleaning the paper dust removing brush](#))
 - Paper feed clutch, pre-registration clutch (Refer to [F.9.2.5 Replacing paper feed clutch \(CL101\) /pre-registration clutch \(CL102\)](#))
2. Remove the 3 connectors [1], the connector [2], the fastons [3] and [4], and the wiring [5].

Note

- When removing the connector [2], be sure to pull it out downward while taking notice that the motor drive board does not crack up.
- When installing the fastons [3] and [4], be sure to insert the orange cord [5] into the pin provided at the center of the upper door interlock switch (MS102) [6].

3. Remove the E-ring [1] and the bearing [2].
4. Remove the 6 screws [3] and then remove the paper feed motor assembly [4].

5. Remove the E-ring [1] and then remove the paper feed idler gear [2].

Note

- When reinstalling the paper feed idler gear [2], be sure to install it with the side on which more teeth are provided set to the metal frame [3].

6. Remove the E-ring [1] and then remove the paper feed input gear assembly [2].

Note

- Be careful that the bearing [3] does not get lost.

7. Remove the E-ring [1] and then remove the paper feed gear [2] and the pin [3].

8. Remove the E-ring [1] and then remove the paper feed input gear [2] and the pin [3].
9. Reinstall the preceding parts following the removal steps in reverse.

10. PERIODICAL MAINTENANCE PROCEDURE EF-102

10.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

10.2 Fusing section

The periodical maintenance procedure is the same as that of fusing section of 1250/1250P/1052.

However, periodical maintenance procedure of some parts differs or not to be required.

Periodical maintenance procedure	Remark
F.5.10.2 Replacing the fusing cleaning web	
F.5.10.3 Removing/reinstalling the fusing section	
F.5.10.4 Opening/closing of the web section	
F.5.10.5 Replacing the fusing heater lamps /1 (L1) and /2 (L2)	
F.5.10.6 Replacing the fusing roller /Up, the heat insulating sleeve, the fusing bearing /Up and the fusing gear	Periodic maintenance cycle of the fusing roller /Up is different.
F.5.10.7 Replacing the fusing roller /Lw assy /Lubrication to the pressure warm assy	Periodic maintenance cycle of the fusing roller /Lw Assy is different.
F.5.10.8 Replacing the fusing cleaning sheet assy	
F.5.10.9 Removing/reinstalling the fusing heating roller assembly	
F.5.10.10 Replacing the fusing heater lamp /3 (L3)	
F.5.10.11 Replacing the fusing heating roller, the heat insulation sleeve /Lw and the heat roller bearing	
Replacing the fusing claw /Lw	For EF-102, the fusing claw /Lw is not equipped so the replacement is not required.
Replacing the fusing claw /Up	For EF-102, the fusing claw /Up is not equipped so the replacement is not required.
Replacing the fusing claws installation assy	No need to replace.
F.5.10.15 Replacing the fusing temperature sensor /2 (TH2)	
F.5.10.16 Replacing the fusing temperature sensor /4 (TH4)	
F.5.10.17 Replacing the pressure worm assy and the pressure wheel assy (1250/1250P/1052/EF only)	
F.5.10.18 Replacing the fusing cleaning roller, the bearing /G and the web prevention part assy	
Replacing the fusing oscillation cam assy	No need to replace.

11. PERIODICAL MAINTENANCE PROCEDURE RU-509/HM-102

11.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

11.2 Output paper density detection section

11.2.1 Cleaning the shutter

(1) Periodically cleaned parts/cycle

- Shutter: Every 600,000 prints

(2) Procedure

1. Remove 2 screws [1] and then remove the shutter cover [2].

2. Loosen 2 screws [1] and then remove the shutter stopper [2] in the arrow-marked direction.

3. Pull out the shutter [1] and clean the correction plate [2] with a blower brush.

Note

- Be careful that the shutter [3] falls down when it is pulled out too much.

11.3 Humidification section (HM-102)

11.3.1 Replacing the humidification rollers /Rt and /Lt and the water feed roller

(1) Periodically replaced parts/Spotted replaced parts/cycle

- Humidification roller /Rt
: Spot replacement (Actual replacement cycle: every 300,000 prints)
- Humidification roller /Lt
: Spot replacement (Actual replacement cycle: every 300,000 prints)
- Water feed roller
: Spot replacement (Actual replacement cycle: every 1,500,000 prints)

(2) Procedure

1. Remove the wire and then open the front door at the maximum.
(Refer to [G.9.2.2 Front door](#))
2. Remove the screw [1] and remove the humidification unit cover [2].
3. Pull out the humidification unit [3].

4. Remove 2 screws [1] and then remove the connector cover /Lt [2].
5. Remove the screw [3] and then disconnect the connector [4].
6. Remove the C-clip [5].
7. Open the open/close plate /Lt assy [6] and remove in the arrow-marked direction [7].

Note

- When reinstalling the open/close plate /Lt assy [6], be sure to hit the open/close plate /Lt assy [6] to the E-ring [8].

8. Remove the screw [1] and then remove the connector cover /Rt [2].
9. Release the clamp [3] and then disconnect the connector [4].
10. Remove 2 screws [5].
11. Remove the C-clip [6].
12. Open the open/close plate /Rt assy [7] and remove in the arrow-marked direction [8].

Note

- When reinstalling the open/close plate /Rt assy [7], be sure to hit the open/close plate /Rt assy [7] to the E-ring [9].

13. Remove 4 screws [1].
14. Remove the humidification roller assy [2].

15. Check point when reinstalling the humidification roller assy

Note

- When reinstalling the humidification roller assy, be sure to set the projections [1] of the pressure release cam so that they hit the pressure rollers [2] beforehand. (Execute this setting to all 4 places.)
- When reinstalling the humidification roller assy, be sure to turn the gear so that the projection [3] of the gear aligns with the notch [4] beforehand.
- When reinstalling the humidification roller assy, be sure not to mis-align the positions of the projections of the humidification pressure cam [1] and the gear [3].

16. Put the humidification roller assy with bottom-up.
17. Remove 2 C-clips [1], and remove 2 gears [2].
18. Remove the C-clip [3], and remove the gear [5] with 2 bearings [4].
19. Remove the spacer [6].
20. Remove the C-clip [7], and remove the gear [8]
21. Remove the C-clip [9], and remove the gear [10] and the spacer [11].
22. Remove the gear [12].

23. Remove 2 C-clips [1], and then remove the humidification pressure cams /FrRt [2] and /FrLt [3] and 2 bearings [4].
24. Remove the C-clips [5], and then remove the humidification pressure cam /RrLt [6].
25. Remove the humidification pressure cam /RrRt [7] and 2 bearings [8].
26. Remove the humidification rollers /Rt [9] and /Lt [10] in the arrow-marked direction [11].

Note

- Remove the control roller [12] releasing to outside.

27. Check point when reinstalling the humidification rollers/Rt [1] and /Lt [2]

Note

- When reinstalling the humidification rollers /Rt [1] and /Lt [2], be sure to note the following points.
The humidification roller /Rt is longer than the humidification roller /Lt.
The side with the groove [3] on the roller shaft comes to the front side.
Never touch the roller surface with bare hands.

28. Remove the C-clips [1], pressure rollers [2], and bearings [3], 4 each.
29. Remove 2 water feed rollers [4] in the arrow-marked direction [5].

Note

- When reinstalling the water feed roller, never touch the roller surface with bare hands.

30. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the pressure roller, be sure to set so that the bearing [1] comes inside.

31. After replacing the humidification rollers /Rt and /Lt and the water feed roller, conduct the following items.

The parts counter of the humidification roller /Rt

- No.336 (1250/1250P/1052)
- No.322 (C7000/C7000P/C70hc)

The parts counter of the humidification roller /Lt

- No.337 (1250/1250P/1052)
- No.323 (C7000/C7000P/C70hc)

The parts counter of the water feed roller

- No.338 (1250/1250P/1052)
- No.324 (C7000/C7000P/C70hc)

11.3.2 Replacing the water feed filter

(1) Spotted replaced parts/cycle

- Water feed filter: Spot replacement (Actual replacement cycle: every 300,000 prints)

(2) Procedure

1. Open the front door.
2. Remove the screw [1] and then pull out the water feed tank [2].

3. Remove 3 screws [1] and open the filter cap [2].

4. Remove the water feed filter [1].
5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the part, be sure to reset the parts counter.
 - No.339 (1250/1250P/1052)
 - No.325 (C7000/C7000P/C70hc)

11.3.3 Replacing the pump motor (P1)

(1) Spotted replaced parts/cycle

- Pump motor (P1): Spot replacement (Actual replacement cycle: every 10,000,000 prints)

(2) Procedure

1. Remove the wire and then open the front door at the maximum. (Refer to [G.9.2.2 Front door](#))
2. Remove the rear cover. (Refer to [G.9.2.3 Rear cover](#))
3. Pull out the humidification unit.
4. Remove the pipe [2] in the arrow-marked direction while pressing the bracket [1].
5. Release the pipe from the clamp [3].

6. Pull out the water feed tank.
7. Remove 7 screws [1] to release the clamp.

Note

- Adjust the positions of the water feed tank and humidification unit so that the connecting arm [2] does not bother when removing the screw [1].

8. Remove the screw [1] to release the clamp.
9. Remove the clamp to release the wiring harness and then disconnect the connector [2].
10. Push the bracket [3] to remove the pipe [4].
11. Remove 2 screws [5] and then remove the pump motor (P1) [6].
12. Reinstall the preceding parts following the removal steps in reverse.
13. After replacing the part, be sure to reset the parts counter.
 - No.343

12. PERIODICAL MAINTENANCE PROCEDURE RU-510

12.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

12.2 Conveyance section

12.2.1 Replacing the entrance conveyance motor (M1), the entrance conveyance belt, the paper exit motor (M2), the paper exit conveyance belt

(1) Periodically replaced parts/cycle

- Entrance motor (M1)
: Spotted replacement (Actual replacement cycle: Every 30,000,000 feeds)
- Entrance conveyance belt
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)
- Paper exit motor (M2)
: Spotted replacement (Actual replacement cycle: Every 30,000,000 feeds)
- Paper exit conveyance belt
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)

(2) Removing the entrance motor assy, Replacement procedure of the entrance conveyance belt

1. Remove the rear cover.
(Refer to [G.10.2.3 Rear cover](#))
2. Disconnect the connector [1].
3. Remove the 5 saddles [2] of the entrance motor mounting plate, and release the wiring harness.
4. Remove 4 screws [3], the entrance motor assy [4] and the entrance conveyance belt [5].

Note

When it is reinstalled, temporary tighten the 4 screws [3] and apply tension to the entrance conveyance belt [5] by own weight of the entrance motor assy [4]. Then tighten 4 screws [3].

5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the entrance conveyance belt, be sure to reset the special parts counter.
 - No.331

(3) Removing the paper exit motor assy, Replacement procedure of the paper exit conveyance belt

1. Remove the rear cover.
(Refer to [G.10.2.3 Rear cover](#))
2. Disconnect the connector [1].
3. Remove the 3 saddles [2] of the paper exit motor mounting plate, and release the wiring harness.
4. Remove 4 screws [3] and remove the paper exit motor [4].
5. Remove the screws [5] and then remove the drive gear [6] and the paper exit conveyance belt [7].

Note

When it is reinstalled, temporarily tighten 4 screws [3] and apply tension to the paper exit conveyance belt [7] by own weight of the paper exit motor assy [4]. Then, tighten 4 screws [3].

6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the paper exit conveyance belt, be sure to reset the special parts counter.
 - No.331

(4) Replacement procedure of the entrance motor (M1) and the paper exit motor (M2)

1. Remove the entrance motor assy and the paper exit motor assy.
(Refer to [F.12.2.1.\(2\) Removing the entrance motor assy](#), [Replacement procedure of the entrance conveyance belt](#), [F.12.2.1.\(3\) Removing the paper exit motor assy](#), [Replacement procedure of the paper exit conveyance belt](#))
2. Remove the E-ring [1].
3. Loosen the 2 screws [2] and remove the pulley gear [3].
4. Remove the 4 screws [4]. Then remove the entrance motor (M1) and the paper exit motor (M2) [6] from the mounting plate [5].
5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the entrance motor (M1) and the paper exit motor (M2), be sure to reset the special parts counter.
Entrance motor (M1), paper exit motor (M2)
• No.333

12.2.2 Replacing the paper exit pulley and the conveyance pulley**(1) Periodically replaced parts/cycle**

- Paper exit pulley
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)
- Conveyance pulley
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)

(2) Procedure

1. Remove the entrance motor (M1), the entrance conveyance belt, the paper exit motor (M2) and the paper exit conveyance belt.
(Refer to [F.12.2.1 Replacing the entrance conveyance motor \(M1\)](#), [the entrance conveyance belt](#), [the paper exit motor \(M2\)](#), [the paper exit conveyance belt](#))
2. Remove the E-ring [1] and remove the paper exit conveyance pulley [2].
3. Remove 3 each of the screws [3] at 5 positions, and then remove 5 conveyance pulleys [4].

Note

- Reinstall the paper exit pulley [4] with the gear inside.

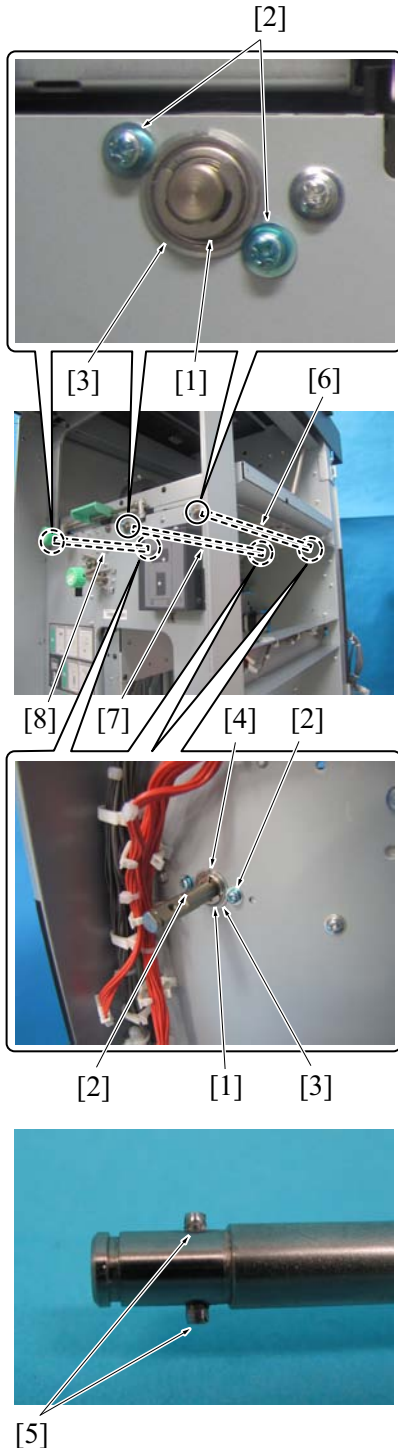

4. Reinstall the preceding parts following the removal steps in reverse.
5. After replacing the paper exit pulley and conveyance pulley, be sure to reset the special parts counter.
Paper exit pulley, Conveyance pulley
• No.332

12.2.3 Replacing the entrance roller /1, /2, paper exit roller, bearing /K and bearing assy**(1) Periodically replaced parts/cycle**

- Entrance roller /1
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)
- Entrance roller /2
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)

- Paper exit roller
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)
- Bearing /K
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)
- Bearing assy
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)

(2) Procedure

1. Replacing the entrance motor (M1), the entrance conveyance belt, the paper exit motor (M2), the paper exit conveyance belt (Refer to [F.12.2.1 Replacing the entrance conveyance motor \(M1\), the entrance conveyance belt, the paper exit motor \(M2\), the paper exit conveyance belt](#))
Remove the paper exit pulley, the conveyance pulley.
(Refer to [F.12.2.2 Replacing the paper exit pulley and the conveyance pulley](#))
 2. Remove the E-rings [1], 1 each.
 3. Remove the screw [2], 2 each, and then remove the bearing /K and bearing assy [3], 1 each.
*Only the bearing of paper exit roller [8] is the bearing assy.
- Note**
- When reinstalling the bearing /K and bearing assy [3], be sure to set so that the notch of the bearing /K and bearing assy comes in the position [4] as shown in the picture.
 - To prevent the notch from opening, when tighten the screws [2], 1 for each, in counterclockwise order.
 - When reinstalling the bearing /K [3] of the entrance roller / 1 [6], /2 [7], be sure to apply the Molykote EM-30L inside the bearing /K [3].
 - When reinstalling the bearing /K [3] of the paper exit roller [8], be sure to apply the Molykote EM-30L on all over around the spring pins [5] on front and rear of the shaft.
4. Remove the entrance roller /1 [6], /2 [7] and the paper exit roller [8].
 5. Reinstall the preceding parts following the removal steps in reverse.
 6. After replacing the entrance roller /1, /2 and paper exit roller, bearing /K and bearing Assy, be sure to reset the parts counter.
 - Entrance roller /1, /2
 - No.325
 - Exit roller
 - No.328
 - Bearing /K and bearing Assy
 - No.330

12.2.4 Replacing the merging section roller and bearing /K

(1) Periodically replaced parts/cycle

- Merging section roller
: Spot replacement (Actual replacement cycle: Every 20,000,000 feeds)
- Bearing /K
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)

(2) Procedure

1. Remove the paper exit motor (M2) and the paper exit conveyance belt. (Refer to [F.12.2.1 Replacing the entrance conveyance motor \(M1\), the entrance conveyance belt, the paper exit motor \(M2\), the paper exit conveyance belt](#))
2. Remove the conveyance pulley. (Refer to [F.12.2.2 Replacing the paper exit pulley and the conveyance pulley](#))
3. Remove the screw [1], and remove the knob [2].
4. Remove the screws [3], 2 each, and E-rings [4], 1 each, and then remove the bearings /K [5], 1 each.

Note

- When reinstalling the bearing /K [7], be sure to set so that the notch of the bearing /K comes in the position [6] as shown in the picture.
- When reinstalling the bearing /K [7], be sure to apply the Molykote EM-30L inside of the bearing /K [7].

5. Remove the merging section roller [7].
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the merging section roller and bearing /K, be sure to reset the special parts counter.
 - Merging section roller
 - No.326
 - Bearing /K
 - No.330

12.2.5 Replacing the stacker entrance roller and bearing /K**(1) Periodically replaced parts/cycle**

- Stacker entrance roller
 - : Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)
- Bearing /K
 - : Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)

(2) Procedure

1. Remove the paper exit motor (M1) and the entrance conveyance belt. (Refer to [F.12.2.1 Replacing the entrance conveyance motor \(M1\)](#), [the entrance conveyance belt](#), [the paper exit motor \(M2\)](#), [the paper exit conveyance belt](#))
2. Remove the conveyance pulley. (Refer to [F.12.2.2 Replacing the paper exit pulley and the conveyance pulley](#))
3. Remove the screw [1], and remove the knob [2].
4. Remove each 1 spring [3].
5. Remove the screw [4], 1 each, and the mounting metal fitting [5], 1 each.
6. Remove the E-ring [6], 1 each, and then remove bearing /K [7], 1 each.

Note

- When reinstalling the bearing /K [7], be sure to set so that the notch of the bearing /K comes in the position [8] as shown in the picture.
- When reinstalling the bearing /K [7], be sure to apply the Molykote EM-30L inside of the bearing /K [7].

7. Remove the stacker entrance roller [9].
8. Reinstall the preceding parts following the removal steps in reverse.
9. After replacing the stacker entrance roller and bearing /K, be sure to reset the parts counter.

Stacker entrance roller

- No.326

Bearing /K

- No.330

12.2.6 Replacing the refeed roller and bearing /K**(1) Periodically replaced parts/cycle**

- Paper re-feed roller
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)
- Bearing /K
: Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)

(2) Procedure

1. Remove the entrance motor (M1), the entrance conveyance belt, the paper exit motor (M2) and the paper exit conveyance belt. (Refer to [F.12.2.1 Replacing the entrance conveyance motor \(M1\), the entrance conveyance belt, the paper exit motor \(M2\), the paper exit conveyance belt](#))
Remove the paper exit pulley and the conveyance pulley. (Refer to [F.12.2.2 Replacing the paper exit pulley and the conveyance pulley](#))

2. Remove each of the spring [1], 1 each.
3. Remove each of the screws [2], 1 each, and the mounting metal fitting [3], 1 each.
4. Remove the E-rings [4], 1 each, and then remove 5 bearings /K [5].

Note

- When the bearing /K [5] is reinstalled, be sure to set it so that the notch of the bearing /K [5] comes in the position [6].
- When reinstalling the bearing /K [5], be sure to apply the Molykote EM-30L inside the bearing /K [5].

5. Remove the paper re-feed roller [8].
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the paper re-feed roller and bearing /K, be sure to reset the special parts counter.

Paper re-feed roller

- No.327

Bearing /K

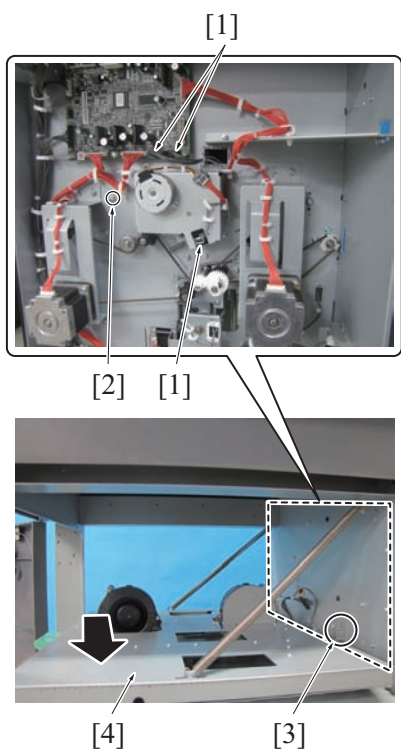

- No.330

12.2.7 Replacing the driven roller**(1) Periodically replaced parts/cycle**

- Driven roller
: Spotted replacement (Actual replacement cycle: Every 50,000,000 feeds)

(2) Procedure

1. Remove the left cover.
(Refer to [G.10.2.4 Left cover](#))
Remove the rear cover.
(Refer to [G.10.2.5 Upper cover](#))
2. Remove the 2 open/close springs [1].
3. Release the release spring /Rt [2] and remove the screw [3]. Then remove the locking claw [4] and the release spring /Rt [2].
4. Release the release spring /Lt [5] and remove the screw [6]. Then remove the locking claw [7] and the release spring /Lt [5].
5. Remove the 3 E-rings [8] and remove pin [9]. Then pull out the open/close lever Assy [10] in the arrow-marked direction.

6. Disconnect the 3 connectors [1] and remove the saddle to release the wiring harness.
7. Remove the screw [2], and then remove the open/close shaft Assy /Rt [3].
8. Pull out the straight conveyance guide plate /Up [4] in the arrow-marked direction.

9. Remove 1 screw [1] and then remove the open/close lever lock parts[2].
10. Remove 10 screws [3] and 3 screws [4].
11. Remove the 3 saddles [5], and release the wiring harness, and remove the conveyance cover /Up [6].

12. Remove the holding spring [1], 1 each, and remove the 4 driven rollers [2], 4 each.

[1]

13. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the driven roller, be sure to set it so that the groove of the drive motor [1] faces downward.

14. After replacing the driven roller, be sure to reset the special parts counter.
- No.329

12.2.8 Replacing the straight gate**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Straight gate
 - : Spotted replacement (Actual replacement cycle: Every 20,000,000 feeds)

(2) Procedure

1. Remove the rear cover.
(Refer to [G.10.2.3 Rear cover](#))
2. Disconnect the 2 connectors [1].
3. Remove the 6 saddles [2] of the gate motor mounting plate, and release the wiring harness.
4. Remove the 3 screws [3] and then remove the fan motor mounting plate [4].

5. Remove the straight gate spring [1].
6. Remove the screw [2] and remove the straight gate solenoid arm [3].
7. Remove the E-ring [4] and remove the bearing [5].

8. Remove the straight conveyance guide plate [1].
9. Remove the E-ring [2] and bearing [3], and pull out the straight gate [4] in the arrow-marked direction.
10. Reinstall the preceding parts following the removal steps in reverse.
11. After replacing the straight gate, be sure to reset the special parts counter.
 - Straight gate
 - No.324

12.2.9 Replacing the stack switch motor (M6)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Stack switch motor (M6)
- : Spot replacement (Actual replacement cycle: Every 60,000,000 prints)

(2) Procedure

1. Remove the rear cover.
(Refer to [G.10.2.3 Rear cover](#))
2. Remove the saddle [1], and release the wiring harness.
3. Disconnect the connector [2].
4. Remove the 2 screws [3], and remove the stack switch motor (M6) [4].

5. Reinstall the preceding parts following the removal steps in reverse.
- Note**
- When installing the stack switch motor (M6), be sure to fit the gear of stack switch motor (M6) to the belt [1].
6. After replacing the stack switch motor (M6), be sure to reset the special parts counter.
 - Stack switch motor (M6)
 - No.334

13. PERIODICAL MAINTENANCE PROCEDURE ZU-608

13.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

13.2 Punch section

13.2.1 Replacing the punch scraps conveyance motor (M607)

(1) Periodically replaced parts/cycle

- Punch scraps conveyance motor
: Every 750,000 prints

(2) Procedure

1. Remove the Z folding unit.

[G.11.2.7 Punch motor \(M604\)](#)

2. Disconnect the connector [1] and remove 2 screws [2], and remove the punch scraps conveyance motor assy [3].

3. Remove 2 screws [2], and remove the punch scraps conveyance motor [2].

4. Reinstall the preceding parts following the removal steps in reverse.
5. After replacing the part, be sure to reset the parts counter.
 - No.180 (951)

13.2.2 Replacing the punch clutch (CL601)

(1) Periodically replaced parts/cycle

- Punch clutch
: Every 750,000 prints

(2) Procedure

1. Remove the Z folding unit.

[G.11.2.7 Punch motor \(M604\)](#)

2. Remove the punch unit.

[G.11.2.6 Z-folding/conveyance unit](#)

3. Cut 3 wiring harness bands [1].

**Note**

- When bind the wiring harness band [1], face them to the arrow-marked direction [2] to avoid the contact with the conveyance section of the main body.

4. Remove 2 screws [1], and remove the punch motor assy [2].

Note

- When reinstalling the punch motor assy [2], press the punch motor gear [3] to the gear [4]. Be sure to check that the gears rotate smoothly and there is appropriate backlash.

5. Remove the C-clip [1] and remove the punch clutch [2].

Note

- When reinstalling punch clutch [2], be sure to check the stopper [3] is engaged with a projection [4] of metal plate.

6. Reinstall the preceding parts following the removal steps in reverse.

14. PERIODICAL MAINTENANCE PROCEDURE FS-532

14.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

14.2 Conveyance section

14.2.1 Lubrication of the FNS entrance roller conveyance switching cam, the FNS entrance roller conveyance switching gate /Up

(1) Periodic lubrication parts/cycle

- FNS entrance roller conveyance switching cam
: Periodical lubrication cycle: Every 1,000,000 prints *1
: Periodical lubrication cycle: Every 750,000 prints *2
- FNS entrance roller conveyance switching gate /Up
: Periodical lubrication cycle: Every 1,000,000 prints *1
: Periodical lubrication cycle: Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Open the front door.
2. Apply the Molykote EM-30L on the FNS entrance roller conveyance switching cam [1] and the arm section [2] of the FNS entrance roller conveyance switching gate /Up.

14.3 Stacker section

14.3.1 Replacing the paddle

(1) Periodically replaced parts/cycle

- Paddle
: Spotted replacement (Actual replacement cycle: Every 300,000 prints)

(2) Procedure

1. Pull out the stacker unit. (Refer to [G.12.3.12.\(1\) Procedure for pulling out the stacker unit](#))
2. Remove each E-ring [1] and then remove the paddle assy [2], 1 each, in the arrow-marked direction.

Note

- When removing the paddles, be careful not to drop the E-ring [1] and the axis pin [3].

3. Remove the paddle [2], 3 each, from the paddle assy [1].

NOTE

- When reinstalling it, be sure to reinstall in the same direction as the installed direction.

4. Reinstall the preceding parts following the removal steps in reverse.
5. After replacing the paddle, conduct the following steps.
When connecting to 1250/1250P/1052
Counter reset of the parts counter No.232
When connecting to 951
Counter reset of the parts counter No.168

14.3.2 Replacing the stapler unit**(1) Periodically replaced parts/cycle**

- Staple unit
: Spotted replacement (Actual replacement cycle: Every 500,000 operations)

(2) Procedure

1. Pull out the stacker unit. (Refer to [G.12.3.12.\(1\) Procedure for pulling out the stacker unit](#))
2. Remove 2 screws [1] and then remove the wiring mounting cover [2].

3. Remove 2 screws [1], and then remove the connector cover [2].

4. Disconnect 2 connectors [1], and release the wiring harness.
5. Remove the screw [2] to remove the ground [3], and then release the wiring harness.
6. Release the wiring harness from the hole [4], remove the screw [5].
7. By removing the screw [6], remove the stapler unit assy [7] in the arrow-marked direction.

Note

- Be sure to remove the screw [5] before removing the screw [6]. Otherwise, the stapler unit assy [7] could deform.

**Note**

- Removing the stapler unit assembly dislocates the staple position. Be sure to record the current adjustment position [1] before removing, and then adjust the position again when installing. (Refer to [I.17.1 Staple position adjustment](#))

- Remove 2 C-clips [1] to pull out the shaft [2], and remove 2 springs [3] and the shutter [4].
- Remove 3 screws [5] and then remove the stapler unit [6].
- Reinstall the preceding parts following the removal steps in reverse.
- After replacing the stapler unit, conduct the following item.
Staple Position Adjustment (Refer to [I.17.1 Staple position adjustment](#))
When connecting to 1250/1250P/1052
Counter reset of the parts counter No.231
When connecting to 951
Counter reset of the parts counter No.167

14.3.3 Lubrication of the stapler shaft and the rear stopper shaft**(1) Periodic lubrication parts/cycle**

- Stapler shaft
 - : Periodical lubrication cycle: Every 1,000,000 prints *1
 - : Periodical lubrication cycle: Every 750,000 prints *2
- Rear stopper shaft
 - : Periodical lubrication cycle: Every 1,000,000 prints *1
 - : Periodical lubrication cycle: Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Pull out the stacker unit. (Refer to [G.12.3.12.\(1\) Procedure for pulling out the stacker unit](#))
2. Apply the Molykote EM-30L on 2 stapler shafts [1].
3. Apply the Molykote EM-30L on the rear stopper shaft [2], and move the rear stopper /Fr [3] and /Rr [4].

14.4 Paper exit section**14.4.1 Lubrication of the paper exit alignment plate shaft****(1) Periodic lubrication parts/cycle**

- Paper exit alignment plate shaft
 - : Periodical lubrication cycle: Every 1,000,000 prints *1
 - : Periodical lubrication cycle: Every 750,000 prints *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the upper cover /Fr2. (Refer to [G.12.3.7 Upper cover / Fr2](#))
2. Remove the upper cover /Rr. (Refer to [G.12.3.8 Upper cover /Rr](#))
3. Remove 3 screws [1] and remove the paper exit cover /Up [2].
4. Apply the Molykote on the paper exit alignment plate shaft [1].
5. Reinstall the preceding parts following the removal steps in reverse.

15. PERIODICAL MAINTENANCE PROCEDURE SD-510

15.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

15.2 Stapler section

15.2.1 Replacing the stapler unit

(1) Periodically replaced parts/cycle

- Staple unit
: Spot replacement (Actual replacement cycle: Every 200,000 operations)

(2) Procedure for removal

1. Fully pull out the SD unit to install the SD support stay. (Refer to [G.13.3.4 SD unit](#))
2. Remove the front cover. (Refer to [G.13.3.2 Front cover](#))
3. Remove the stapler unit cover. [G.13.3.3 Stapler unit cover](#)
4. Remove the 2 screws [2] and then remove the SD unit cover/Lt [1] to the arrow-marked direction.

5. Remove the saddle, and release the wiring harness [1].
6. Remove the screw [2] and then remove the ground [3].

7. Remove 6 screws [1] and then remove the guide plate [2].

Note

- When installing the guide plate [2], be sure to set the hole [3] to the projection [4] of the guide plate.

8. Remove 2 screws [1] to remove the clincher cover [2].

Note

- Remove the clincher cover [2] to the arrow-marked direction so that the claws [3] are released from the projection [4]
- When removing the clincher cover [2], be sure not to break the paddle [5].

9. Disconnect the connector [1].

10. Remove 2 screws [2] and 2 screws [3]. Then remove the stapler unit assy [4].

Note

- When removing the screws [3], insert the driver into the hole [5] and remove them.

11. Remove 4 screws [1] and then remove the stapler unit [2].

(3) Procedure for reinstallation

Note

- When the stapler unit is removed, be sure to adjust the position with the staple adjustment jig.

1. Install the stapler unit [2] with 4 screws [1].

2. Install the connector [1].
3. Install the stapler unit assy [3] with 4 screws [2].

Note

- When installing the stapler unit assy [3], be sure to set the projection [4] to the hole [5] of the stapler unit assy.

4. Loosen 2 screws [2] of the clincher [1].

Note

- Make sure that 2 injections [3] of the clincher do not come off from 2 slotted holes [4].
- Be careful that the staple adjustment jig [6] cannot be inserted if the 2 screws [2] are too loose.

5. Insert the staple adjustment jig [6] between the stapler unit [5] and the clincher [1], and adjust the horizontal position of the clincher [1].

Note

- When inserting the staple adjustment jig [6], be sure to insert it from obliquely above as indicated by the allow mark [7].

6. Loosen 2 screws [2] to fasten the clincher [1].
7. Pull out the staple adjustment jig [6].
8. Be sure that the following reinstallation of the parts follows the removal steps in reverse.
9. After replacing the staple unit, conduct the following item.
When connecting to 1250/1250P/1052
Counter reset of the parts counter No.345 of the staple unit
When connecting to 951

Counter reset of the parts counter No.182 of the staple unit

15.2.2 Replacing the paddle /1, /2 and /3**(1) Periodically replaced parts/cycle**

- Paddle /1
: Spot replacement (Actual replacement cycle: Every 300,000 prints)
- Paddle /2
: Spot replacement (Actual replacement cycle: Every 300,000 prints)
- Paddle /3
: Spotted replacement (Actual replacement cycle: Every 300,000 prints)

(2) Procedure

1. Fully pull out the SD unit. (Refer to [G.13.3.4 SD unit](#))
2. Remove the stapler unit cover. (Refer to [G.13.3.3 Stapler unit cover](#))
3. Remove each screw [1], and then remove 2 paddle /1 [2].

4. Lift up the paper exit guide [1] and remove each screw [2], and then remove 2 paddles /3 [3]
5. Remove each screw [4], and then remove 2 paddles /2 [5].
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the paddle/1, /2 and /3, conduct the following steps.
When connecting to 1250/1250P/1052
Counter reset of the parts counter No.348 of the paddle /1, /2, /3
When connecting to 951
Counter reset of the parts counter No.185 of the paddle /1, /2, /3

**15.2.3 Cleaning the staple guide /Up and /Lw****(1) Periodically cleaned parts/cycle**

- Staple guide /Up and /Lw

: Periodic cleaning cycle (Every 1,000,000 prints) *1

: Periodic cleaning cycle (Every 750,000 prints) *2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Fully pull out the SD unit. (Refer to [G.13.3.4 SD unit](#))
2. Remove the stapler unit cover. (Refer to [G.13.3.3 Stapler unit cover](#))
3. Clean the staple guide /Up [1] with drum cleaner.

Note

- When moving the stapler unit to right and left, be sure to hold the main body of the stapler.

4. Remove the SD unit cover /Lt. (Refer to [F.15.2.1 Replacing the stapler unit](#))
5. Clean the staple guide /Lw [1] with drum cleaner.

Note

- When moving the stapler unit to right and left, be sure to hold the main body of the stapler.

6. Reinstall the preceding parts following the removal steps in reverse.

15.3 Folding section

15.3.1 Cleaning the folding roller /1, /2

(1) Periodically cleaned parts/cycle

- Folding roller /1, /2

: Periodic cleaning cycle: Every 1,000,000 prints*1

: Periodic cleaning cycle (Every 750,000 prints)*2

*1 1250/1250P/1052

*2 951

(2) Procedure

1. Remove the folding knife assy /1. (Refer to [G.13.3.5 Folding knife assy /1](#))
2. Clean the folding roller /1 [2] and /2 [3] with drum cleaner while lifting up the conveyance guide plate [1].

Note

- Be careful not to adhere the drum cleaner to the PET parts [4].

3. Reinstall the preceding parts following the removal steps in reverse.

16. PERIODICAL MAINTENANCE PROCEDURE PI-502

16.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

16.2 Paper feed section

16.2.1 Replacing the pick-up roller /Up and the paper feed roller /Up

(1) Spotted replaced parts/cycle

- Pick-up roller /Up
: Spotted replacement (Actual replacement cycle: Every 200,000 feeds)
- Paper feed roller /Up
: Spotted replacement (Actual replacement cycle: Every 100,000 feeds)

(2) Procedure

1. Remove the upper cover. (Refer to [G.15.2.2 Upper cover](#))
2. Remove 2 C-clips [1] and slide outward the bearings [2] at the left and right to remove the paper feed roller assy /Up [3].

3. Remove the bearing [1] and remove the actuator [2].

4. Remove 2 C-clips [1] and then remove 2 bearings [2].

5. Remove the C-clip [1].
6. Slide 2 roller shafts [2] in the arrow-marked direction and remove the pick-up roller /Up [3] and the paper feed roller /Up [4].

Note

- When reinstalling, be sure to set them so that the blue surfaces of the one-way clutches of the pick-up roller and the paper feed roller come to the front side.

- Remove the pick-up roller [1] and the paper feed roller [2] from the one-way clutches [3] and [4].

Note

- When reinstalling the pick-up roller [1], insert the one-way clutch [3] from the notch [5] side with its projection [6] fitted to the notch [5] of the pick-up roller.
- When reinstalling the paper feed roller [2], insert the one-way clutch [4] with its projection [8] fitted to the notch [7] of the paper feed roller.

- Reinstall the preceding parts following the removal steps in reverse.
- After replacing the pick-up roller /Up and paper feed roller /Up, conduct the following steps.

For the pick up roller /Up: Counter reset of the parts counter

- No.264 (C8000)
- No.264 (C7000/C7000P/C70hc/C6000/C6000L)
- No.350 (1250/1250P/1052)
- No.187 (951)

For the feed roller /Up: Counter reset of the parts counter

- No.265 (C8000)
- No.265 (C7000/C7000P/C70hc/C6000/C6000L)
- No.351 (1250/1250P/1052)
- No.188 (951)

16.2.2 Replacing the pick-up roller /Lw and the paper feed roller /Lw

(1) Spotted replaced parts/cycle

- Pick-up roller /Lw
: Spotted replacement (Actual replacement cycle: Every 200,000 feeds)
- Paper feed roller /Lw
: Spotted replacement (Actual replacement cycle: Every 100,000 feeds)

(2) Procedure

- Pull the release lever [1] and open the upper door [2].
- Perform steps 2 to 7 of "F.16.2.1 Replacing the pick-up roller /Up and the paper feed roller /Up."
- Reinstall the preceding parts following the removal steps in reverse.
- After replacing the pick-up roller /Lw and paper feed roller /Lw, conduct the following steps.

For the pick up roller /Lw: Counter reset of the parts counter

- No.269 (C8000)
- No.269 (C7000/C7000P/C70hc/C6000/C6000L)
- No.355 (1250/1250P/1052)
- No.192 (951)

For the feed roller /Lw: Counter reset of the parts counter

- No.270 (C8000)
- No.270 (C7000/C7000P/C70hc/C6000/C6000L)
- No.356 (1250/1250P/1052)
- No.193 (951)

16.2.3 Replacing the separation roller /Up and the torque limiter /Up

(1) Spotted replaced parts/cycle

- Separation roller /Up
: Spotted replacement (Actual replacement cycle: Every 100,000 feeds)
- Torque limiter /Up
: Spotted replacement (Actual replacement cycle: Every 600,000 feeds)

(2) Procedure

1. Remove the upper cover. (Refer to [G.15.2.2 Upper cover](#))
2. Remove 2 C-clips [2] and slide outward the bearings [2] at the left and right to remove the paper feed roller assy /Up [3].

3. Release the hooks on the right and left, and then remove the separation roller assy /Up [2] by lifting it up.

4. Remove the C-clip [1] from the separation roller assy /Up and then remove the separation roller /Up [2] and the torque limiter /Up [3].
5. Reinstall the preceding parts following the removal steps in reverse.

Note

- Be sure to install the separation roller /Up with its 2 notches [4] on the front and fitted to the projections [5].

6. After replacing the separation roller /Up and the torque limiter /Up, conduct the followings.

For the feed roller /Up: Counter reset of the parts counter

- No.266 (C8000)
- No.266 (C7000/C7000P/C70hc/C6000/C6000L)
- No.352 (1250/1250P/1052)
- No.189 (951)

For the torque limiter /Up: Counter reset of the parts counter

- No.267 (C8000)
- No.267 (C7000/C7000P/C70hc/C6000/C6000L)
- No.353 (1250/1250P/1052)
- No.190 (951)

16.2.4 Replacing the separation roller /Lw and the torque limiter /Lw**(1) Spotted replaced parts/cycle**

- Separation roller /Lw
: Spotted replacement (Actual replacement cycle: Every 100,000 feeds)
- Torque limiter /Lw
: Spotted replacement (Actual replacement cycle: Every 600,000 feeds)

(2) Procedure

1. Pull the release lever [1] and open the upper door [2].
2. Perform steps 2, 3 and 4 of "[F.16.2.3 Replacing the separation roller /Up and the torque limiter /Up.](#)"
3. Reinstall the preceding parts following the removal steps in reverse.
4. After replacing the separation roller /Lw and the torque limiter /Lw, conduct the followings.
For the separation roller /Lw: Counter reset of the parts counter
 - No.271 (C8000)
 - No.271 (C7000/C7000P/C70hc/C6000/C6000L)

- No.357 (1250/1250P/1052)
- No.194 (951)

For the torque limiter /Lw: Counter reset of the parts counter

- No.272 (C8000)
- No.272 (C7000/C7000P/C70hc/C6000/C6000L)
- No.358 (1250/1250P/1052)
- No.195 (951)

16.2.5 Replacing the paper feed clutch /Up (CL201) and /Lw (CL202)

(1) Spotted replaced parts/cycle

- Paper feed clutch /Up (CL201)
: Spotted replacement (Actual replacement cycle: Every 1,000,000 feeds)
- Paper feed clutch /Lw (CL202)
: Spotted replacement (Actual replacement cycle: Every 1,000,000 feeds)

(2) Procedure

1. Remove the PI Unit. (Refer to [G.15.2.5 PI unit](#))
2. Remove the upper cover. (Refer to [G.15.2.2 Upper cover](#))
3. Remove the rear cover. (Refer to [G.15.2.3 Rear cover](#))
4. Remove the screw [1] and remove the clutch fixing cover [2].

Note

- When installing the clutch fixing plate, be sure to install it so that the spring [3] comes under the fixing plate.
- When installing the clutch fixing plate, be sure to engage the stopper [4] of the clutch with the fixing plate and install it.

5. Remove the connector [5], remove the E-ring [6] and remove the paper feed clutch /Up [7].

Note

- When installing the paper feed clutch /Up [7], be sure to engage the D-cut [8] of the shaft with the paper feed clutch /Up and install it.

6. Pull the release lever [1] and open the upper door [2].
7. Remove 5 screws [3] and disconnect 2 connectors [4].
8. Release the wiring from the saddle and pull out the PIDB mounting plate [5] toward you.

**Note**

- When installing the PIDB mounting plate, be sure to engage the notch [1] of the mounting plate with the projection [2] of the paper feed clutch /Lw.

9. Remove the E-ring [1] and remove the conveyance clutch /Lw [2].

Note

- When installing the paper feed clutch /Up [2], be sure to engage the D-cut [3] of the shaft with the paper feed clutch /Up and install it.

10. Reinstall the preceding parts following the removal steps in reverse.

11. After replacing the paper feed clutch /Up and /Lw, conduct the following steps.

For the paper feed clutch /Up: Counter reset of the parts counter

- No.263 (C8000)
- No.263 (C7000/C7000P/C70hc/C6000/C6000L)
- No.349 (1250/1250P/1052)
- No.186 (951)

For the paper feed clutch /Lw: Counter reset of the parts counter

- No.268 (C8000)
- No.268 (C7000/C7000P/C70hc/C6000/C6000L)
- No.354 (1250/1250P/1052)
- No.191 (951)

17. PERIODICAL MAINTENANCE PROCEDURE LS-505

17.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

17.2 Conveyance section

17.2.1 Replacing the stacker tray up down motor (M1)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Stacker tray up down motor (M1)
: Every 1,500,000 prints *¹ (Actual replacement cycle: Every 5,000,000 feeds *²)

*¹ The periodical replacement is only for 1200/1200P/1051.

*² Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove the rear cover /Lw. (Refer to [G.16.2.2 Cover](#))
2. Disconnect 2 connectors [1].
3. Remove 2 screws [2] and remove the sensor mounting plate [3].
4. Remove 4 screws [4] and remove the stacker tray up down motor (M1) [5].

5. Check point when reinstalling the stacker tray up down motor (M1)
Note

- When reinstalling the stacker tray up down motor (M1), be sure to check that the belt [2] has been engaged with the gear [1], and then engage it with the gear [3] before fastening the stacker tray up down motor (M1) [4].
- When the belt [2] is not horizontally attached between the gear [1] and the gear [3], make adjustments by rotating the encoder [5] counterclockwise.

6. Remove 2 screws [1] and remove the motor mounting plate [3] from the stacker tray up down motor (M1) [2].
7. Reinstall the preceding parts following the removal steps in reverse.
8. After replacing the part, be sure to reset the parts counter.
 - No.250, No.255 or No.245 (1250/1250P/1052)
 - No.216 or No.221 (1200/1200P/1051)
 - No.219 or No.224 (C8000)

17.2.2 Replacing the paper press solenoid /3 (SD8)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Paper press solenoid /3 (SD8)
: Every 1,500,000 prints *¹ (Actual replacement cycle: Every 5,000,000 feeds *²)

*¹ The periodical replacement is only for 1200/1200P/1051.

*² Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure**Note**

- When conducting this operation, be sure to bring the stacker tray down to the bottom in advance.

1. Remove the C-clip [1].
2. Slide the guide rail [2] in the arrow-marked direction and release the fixing.

Note

- In this step, be careful not to release the fixing on the rear guide rail [3].

ls502fs2004c

3. Slant the shift unit [1] to the front side so that you can see the upper surface of it.

Note

- Be sure to slide the shift unit about 10cm to the right in advance.
- Be careful that the belt [2] does not get pushed down by the bottom of the shift unit.

ls502fs2005c

4. Release the cable stopper [3] and remove the ribbon cable [5] from the connector [4].

ls502fs2006c

5. How to handle the ribbon cable

Note

- Slide the lock [2] of the connector [1] for the ribbon cable in the arrow-marked direction and remove the ribbon cable [3].

When reinstalling the ribbon cable, slide the lock in the reverse direction after inserting the cable.

[1] ls502fs2007c

ls502fs2008c

[1] [4] [3] ls502fs2009c

6. Remove the C-clip [1].
7. Slide the guide rail [2] in the arrow-marked direction and release the fixing.
8. Remove the belt [5] from the stopper section [4] of the shift unit [3].

9. Check point when reinstalling the belt

Note

- When attaching the belt [2] to the stopper section [1], slide the shift unit [3] in the arrow-marked direction and engage the stopper section with the belt.

10. Remove the shift unit [2] through the clearance between the belts [1].

Note

- When removing the conveyance unit [2], be careful that the edge stoppers [3] and the paper pressure arms /3 [4] do not contact the belt [1].

11. Disconnect the connector [1].
12. Remove 2 springs [2].
13. Rotate the wire saddle [5] in the arrow-marked direction and remove it.
14. Remove 3 screws [3] and remove the paper press solenoid /3 assy [4].

15. Check point when reinstalling the paper press solenoid /3 assy

Note

- When reinstalling the paper press solenoid /3 assy, be sure to insert the pin [2] of the shaft into the slit section [1] at the tip of the solenoid.

16. Remove 2 screws [1] and remove the solenoid mounting plate [3] from the paper press solenoid /3 (SD8) [2].
17. Reinstall the preceding parts following the removal steps in reverse.
18. After replacing the part, be sure to reset the parts counter.
 - No.249, No.254 or No.259 (1250/1250P/1052)
 - No.215 or No.220 (1200/1200P/1051)
 - No.218 or No.223 (C8000)

17.2.3 Replacing the paper press solenoid /1 (SD6)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Paper press solenoid /1 (SD6)
: Every 1,500,000 prints *1 (Actual replacement cycle: Every 5,000,000 feeds *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove the front covers /Up and /Lw. (Refer to [G.16.2.2 Cover](#))
2. Disconnect the connector [1].
3. Remove the spring [2].
4. Remove 2 screws [3] and remove the paper press solenoid /1 assy [4].

Note

- When reinstalling the paper press solenoid /1 assy, be sure to insert the actuator [6] provided at the tip of the shaft into the slit section [5] at the tip of the solenoid.

5. Remove 2 screws [1] and remove the solenoid mounting plate [3] from the paper press solenoid /1 (SD6) [2].
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the part, be sure to reset the parts counter.
 - No.246, No.251 or No.256 (1250/1250P/1052)
 - No.218 or No.223 (1200/1200P/1051)
 - No.215 or No.220 (C8000)

17.2.4 Replacing the paper press solenoid /2 (SD7)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Paper press solenoid /2 (SD7)
- : Every 1,500,000 prints ^{*1} (Actual replacement cycle: Every 5,000,000 feeds ^{*2})

^{*1} The periodical replacement is only for 1200/1200P/1051.

^{*2} Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove the front covers /Up and /Lw. (Refer to [G.16.2.2 Cover](#))
2. Disconnect the connector [1].
3. Remove the spring [2].
4. Remove 2 screws [2] and remove the paper press solenoid /2 (SD7) [4].

Note

- When reinstalling the paper press solenoid /2 (SD7), be sure to insert the actuator [6] provided at the tip of the shaft into the slit section [5] at the tip of the solenoid.

5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the part, be sure to reset the parts counter.
 - No.248, No.253 or No.258 (1250/1250P/1052)
 - No.214 or No.219 (1200/1200P/1051)
 - No.217 or No.222 (C8000)

17.2.5 Replacing the rear stopper solenoid (SD3)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Rear stopper solenoid (SD3)
- : Every 1,500,000 prints ^{*1} (Actual replacement cycle: Every 5,000,000 feeds ^{*2})

^{*1} The periodical replacement is only for 1200/1200P/1051.

^{*2} Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove the rear cover /Lw. (Refer to [G.16.2.2 Cover](#))
2. Disconnect the connector [1].
3. Remove the spring [2].
4. Remove 2 screws [3] and remove the rear stopper solenoid (SD3) [4].

Note

- When reinstalling the rear stopper solenoid (SD3), be sure to insert the actuator [6] provided at the tip of the shaft into the slit section [5] at the tip of the solenoid.
5. Reinstall the preceding parts following the removal steps in reverse.
 6. After replacing the part, be sure to reset the parts counter.
 - No.247, No.252 or No.257 (1250/1250P/1052)
 - No.213 or No.218 (1200/1200P/1051)
 - No.216 or No.221 (C8000)

18. PERIODICAL MAINTENANCE PROCEDURE FD-503

18.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

18.2 Conveyance section

18.2.1 Replacing roller solenoids /1 (SD5) to /4 (SD8)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Roller solenoid /1 (SD5) to /4 (SD8)
: Every 10,500,000 prints *¹ (Actual replacement cycle: Every 5,000,000 punches *²)

*¹ The periodical replacement is only for 1200/1200P/1051.

*² Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove 4 screws [1] and then remove the cord support board /A [2].
2. Remove the hook of the spring [3] from the shaft [4].

3. Disconnect 4 connectors [1].
4. Remove each of 2 screws [2] and then remove the roller solenoids /1 (SD5) to /4 (SD8) [3].
5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the part, be sure to reset the parts counter.
 - No.242 (1250/1250P/1052)
 - No.209 (1200/1200P/1051)
 - No.208 (C8000)
7. Make adjustments of the installation position. (Refer to [I.22.1 Roller solenoids /1 \(SD5\), /2 \(SD6\), /3 \(SD7\) and /4 \(SD8\) position adjustment](#))

18.2.2 2nd folding roller solenoid (SD18)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- 2nd folding roller solenoid (SD18)
: Every 10,500,000 prints *¹ (Actual replacement cycle: Every 5,000,000 punches *²)

*¹ The periodical replacement is only for 1200/1200P/1051.

*² Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

fd501fs2047c

1. Remove the rear cover. (Refer to [G.17.3.4 Rear cover](#))
2. Disconnect 3 connectors [1] and then remove the wiring harnesses from the 7 wiring harness guides [3] of the coupling arm /Rr [2].

fd501fs2048c

3. Remove 2 C-clips [1].
4. Remove the shaft [2] and separate the coupling arm /Fr [3] and the coupling arm /Rr [4].

a0h0t3c004ca

5. Open the front door [1] and then remove the screw [2].
6. Pull out the folding unit [3].

7. Remove the stopper screws [1], 1 each, from the left and right rails and pull further out the folding conveyance section.

8. Open the guide plate [1].
9. Remove 2 screws [2] and then remove the wiring mounting cover [3].

10. Disconnect the connector [1].
11. Remove 2 screws [2] and then remove the 2nd folding roller solenoid (SD18) [3].
12. Reinstall the preceding parts following the removal steps in reverse.
13. After replacing the part, be sure to reset the parts counter.
 - No.243 (1250/1250P/1052)
 - No.210 (1200/1200P/1051)
 - No.209 (C8000)
14. Make adjustments of the installation position. (Refer to [1.22.2 2nd folding roller solenoid \(SD18\) position adjustment](#))

18.3 Punch section

18.3.1 Replacing the punch unit

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Punch unit

: Every 10,500,000 prints ^{*1} (Actual replacement cycle: Every 5,000,000 punches ^{*2})

^{*1} The periodical replacement is only for 1200/1200P/1051.

^{*2} Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove 2 connectors [1].
2. Remove 4 screws [2].
3. Remove the punch unit [3].
4. Reinstall the preceding parts following the removal steps in reverse.
5. After replacing the part, be sure to reset the parts counter.
 - No.241 (1250/1250P/1052)
 - No.208 (1200/1200P/1051)
 - No.207 (C8000)

18.3.2 Cleaning the punch shaft and the punch support board**(1) Periodically cleaned parts/cycle**

- Punch shaft
 - : Every 1,400,000 prints (Actual cleaning count: Every 1,000,000 punches) *1
 - : Every 750,000 prints *2
 - : Every 1,500,000 prints *3
- Punch support board
 - : Every 1,400,000 prints (Actual cleaning count: Every 1,000,000 punches) *1
 - : Every 750,000 prints *2
 - : Every 1,500,000 prints *3

*1 C6501/C6501P/C65hc

*2 1200/1200P/1051

*3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Remove 2 connectors [1].
2. Remove 4 screws [2].
3. Remove the punch unit [3].

4. Remove the plastic stopper [1], and remove the pin [2].
5. Remove the punch shaft [3], and clean the periphery. (Isopropyl alcohol/Cleaning pad)

6. Clean the inner periphery of the hole [2] of the punch support board [1]. (Isopropyl alcohol/Cleaning pad)

18.3.3 Lubricating the punch drive section**(1) Periodically lubricated parts/cycle**

- Punch drive section
 - : Every 1,400,000 prints (Actual lubrication cycle: Every 1,000,000 punches) *1
 - : Every 750,000 prints *2

: Every 1,500,000 prints *3

*1 C6501/C6501P/C65hc

*2 1200/1200P/1051

*3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Remove 2 connectors [1].
2. Remove 4 screws [2].
3. Remove the punch unit [3].

4. Lubricate 2 stopper cams [1] and 8 gears [2]. (Molykote EM-30L)

18.4 Main tray section

18.4.1 Replacing the tray up down motor (M11)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Tray up down motor (M11)

: Every 5,200,000 prints (Actual replacement cycle: Every 5,000,000 prints) *1

: Every 10,500,000 prints (Actual replacement cycle: Every 5,000,000 prints) *2

: Spot replacement (Actual replacement cycle: Every 5,000,000 prints) *3

*1 C6501/C6501P/C65hc

*2 1200/1200P/1051

*3 1250/1250P/1052/C8000

(2) Procedure

Note

- Be sure to remove the tray up down motor (M11) while supporting the up/down stay with your hands.

fd501fs2005c

1. Remove the rear cover (refer to [G.17.3.4 Rear cover](#)) and the left cover /Rr (refer to [G.17.3.6 Left cover /Rr](#)).
2. Open the front door and pull out the folding unit.
3. Disconnect the connector [1].
4. Remove 2 screws [2] and then remove the tray up down motor (M11) [3].
5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the part, be sure to reset the parts counter.
 - No.244 (1250/1250P/1052)
 - No.211 (1200/1200P/1051)
 - No.210 (C8000)
 - No.161 (C6501/C6501P/C65hc)

18.5 PI section

18.5.1 Replacing the pick-up rubber (Upper stage)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Pick-up rubber
 - : Every 5,200,000 prints (Actual replacement cycle: Every 200,000 feeds) * 1
 - : Every 5,250,000 prints (Actual replacement cycle: Every 200,000 feeds) * 2
 - : Spot replacement (Actual replacement cycle: Every 200,000 feeds) * 3

* 1 C6501/C6501P/C65hc

* 2 1200/1200P/1051

* 3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

fd501fs2006c

1. Open the upper door.
2. Remove 2 screws [1] and then remove the protective cover [2].

fd501fs2007c

3. Disconnect the connector [1].
4. Remove 4 screws [2] and then remove the pick-up unit /Up [3].

Note

- The rear side of the shaft is inserted into the coupling [4]. Be sure to remove the pick-up unit /Up [3] from the front side.
- Be careful not to damage 2 actuators [5] of the pick-up unit /Up.

fd501fs2008c

5. Remove the hook of the spring [1] from the mounting plate [2].
6. Remove 2 C-clips [3] and then remove the shaft [4].

7. Remove 2 C-clips [1].
8. Remove the shaft fixing piece [2], and then remove the shaft [3] from the mounting plate [4].

9. Remove 2 C-clips [1].

10. Remove the spacer [1] and the belt restriction plate [2].

11. Remove the belt [2] from the gears [2] and [4], and then remove the gears [2] and [4] and the pin [5] from the pick-up roller shaft [4].

12. Pull out the pick-up roller shaft [1] to the front side, and remove the pick-up roller assy [2].

13. Remove the pick-up roller [1] and replace the pick-up rubber [2].

Note

- Be sure to install the pick-up roller so that the one-way clutch [3] (blue) is on the front side.

14. Remove the C-clip [1].
15. Remove the E-ring [2].
16. Remove the belt restriction plate [3].
17. Remove the belt [4] from the gear [5], and then remove the gear [5] and the pin [6] from the pick-up roller shaft [7].
18. Pull out the pick-up roller shaft [7] to the rear side, and remove the pick-up roller assy [8].
19. Remove the pick-up roller and replace the pick-up rubber.

Note

- Be sure to install the pick-up roller so that the one-way clutch [9] (blue) is on the front side.

20. Remove 2 C-clips [1].
21. Remove the belt restriction plate [2].
22. Remove the belt [3] from the gear [4], and then remove the gear [4] and the pin [5] from the pick-up roller shaft [6].
23. Pull out the pick-up roller shaft [6] from the rear side, and remove the pick-up roller assy [7].
24. Remove the pick-up roller and replace the pick-up rubber.

Note

- Be sure to install the pick-up roller so that the one-way clutch [8] (blue) is on the front side.

25. After replacing the part, be sure to reset the parts counter.

- No.235 (1250/1250P/1052)
- No.202 (1200/1200P/1051)
- No.201 (C8000/C7000/C7000P/C70hc/C6000)
- No.152 (C6501/C6501P/C65hc)

18.5.2 Replacing the paper feed rubber (Upper stage)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Paper feed rubber
 - : Every 2,200,000 prints (Actual replacement cycle: Every 100,000 feeds)* 1
 - : Every 2,250,000 prints (Actual replacement cycle: Every 100,000 feeds)* 2
 - : Spot replacement (Actual replacement cycle: Every 100,000 feeds)* 3

* 1 C6501/C6501P/C65hc

* 2 1200/1200P/1051

* 3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

fd501fs2017c

fd501fs2018c

fd501fs2019c

fd501fs2020c

fd501fs2021c

1. Conduct the steps 1 to 8 in "F.18.5.1 Replacing the pick-up rubber (Upper stage)" and remove the pick-up roller unit.
2. Remove the C-clip [1].
3. Remove the belt restriction plate [2].
4. Remove the spacer [3].
5. Remove the belt [4].
6. Remove the gear [5] and the pin [6].
7. Remove the gear [7] and the pin [8].

8. Remove 2 C-clips [1] and then remove the entire paper feed arm [2] from the paper feed shaft [3].

9. Remove the spacer [1].
10. Remove the actuator [2].
11. Remove the spacer [3].
12. Remove 2 C-clips [4].

13. Remove the paper feed arm [1].
14. Remove the spacer [2].
15. Remove the paper feed roller assy [3].

16. Remove the paper feed roller [1] and replace the paper feed rubber [2].
17. Reinstall the preceding parts following the removal steps in reverse.

Note

- Be sure to install the pick-up roller so that the one-way clutch [3] (blue) is on the front side.

18. After replacing the part, be sure to reset the parts counter.
 - No.237 (1250/1250P/1052)
 - No.204 (1200/1200P/1051)
 - No.203 (C8000/C7000/C7000P/C70hc/C6000)
 - No.154 (C6501/C6501P/C65hc)

18.5.3 Replacing the separation rubber (upper stage)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Separation rubber
 - : Every 2,200,000 prints (Actual replacement cycle: Every 100,000 feeds)*1

: Every 2,250,000 prints (Actual replacement cycle: Every 100,000 feeds)*2

: Spot replacement (Actual replacement cycle: Every 100,000 feeds)*3

*1 C6501/C6501P/C65hc

*2 1200/1200P/1051

*3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

fd501fs2022c

fd501fs2023c

1. Conduct the steps 1 to 4 in "F.18.5.1 Replacing the pick-up rubber (Upper stage)" and remove the pick-up unit /Up.
2. Remove 2 C-clips [1].
3. Remove 2 bearings [2].
4. Remove the C-clip [3] and then remove the entire roller shaft from the mounting plate while pressing the separation roller assy [4] against the front gear [5].

Note

- Pins are employed on the inside of the separation roller assy [4] and the gear [5] respectively. When removing them, be careful that these pins do not get lost. With the C-clip [6] on the front side of the gear left as it is, pressing the roller onto the gear prevents the pins from dropping off.
5. Remove the separation roller rubber [1] from the separation roller [2] and replace it.
 6. Reinstall the preceding parts following the removal steps in reverse.
 7. After replacing the part, be sure to reset the parts counter.
 - No.236 (1250/1250P/1052)
 - No.203 (1200/1200P/1051)
 - No.202 (C8000/C7000/C7000P/C70hc/C6000)
 - No.153 (C6501/C6501P/C65hc)

18.5.4 Replacing the pick-up rubber (Lower stage)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Pick-up rubber

: Every 5,200,000 prints (Actual replacement cycle: Every 200,000 feeds)*1

: Every 5,250,000 prints (Actual replacement cycle: Every 200,000 feeds)*2

: Spot replacement (Actual replacement cycle: Every 200,000 feeds)*3

*1 C6501/C6501P/C65hc

*2 1200/1200P/1051

*3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

Note

- A shaft fixing screw is inserted when removing the PI tray /Up. Be sure to remove this shaft fixing screw from the PI tray /Up after completion of the replacement of the pick-up roller /Lw. Operating the machine with the shaft fixing screw inserted to the PI tray /Up damage to the PI section.

fd501fs2024c

1. Make sure that the PI lift plate /Up [1] has come down fully. If it has not come down completely, conduct the I/O check (output) (PI/Up: 70-11, PI/Lw: 70-13) in the service mode.
2. Conduct the steps 1 to 4 in "F.18.5.1 Replacing the pick-up rubber (Upper stage)" and remove the pick-up unit /Up.
3. Remove 4 screws [2] and then remove the paper feed stopper plate /Up [3].

[2] fd501fs2025c

[4] fd501fs2026c

fd501fs2027c

4. Remove the shaft fixing screw [1] and insert it in the shaft fixing hole [2].

Note

- Be sure to turn the shaft fixing screw [1] until its stem section disappears completely.
- After completion of the replacement of the pick-up rubber (lower stage), be sure to remove the shaft fixing screw [1] from the position [2] and get it back to the position [1]. Operating the machine with the shaft fixing screw inserted to the position [2] damage to the PI section.

5. Remove the spring [2] hooked between the separation roller unit [1] and the PI tray /Up [3].
6. Disconnect the connector [5].
7. Remove 4 screws [4] and then remove the PI tray /Up [3].

Note

- When removing the PI tray /Up [2], be sure to pull it diagonally up to the left.

8. Disconnect the connector [1].
9. Remove 4 screws [2] and then remove the pick-up unit /Lw [3].
10. For the subsequent operations, conduct the pick-up rubber (upper stage) (steps 4 to 25). (Refer to [F.18.5.1 Replacing the pick-up rubber \(Upper stage\)](#))
11. Replace it with a new pick-up rubber.
12. Reinstall the preceding parts following the removal steps in reverse.

Note

- When installing the PI tray /Up, be sure to remove the shaft fixing screw and get it back to the original position.

13. After replacing the part, be sure to reset the parts counter.
 - No.238 (1250/1250P/1052)
 - No.205 (1200/1200P/1051)
 - No.204 (C8000/C7000/C7000P/C70hc)
 - No.155 (C6501/C6501P/C65hc)

18.5.5 Replacing the paper feed rubber (lower stage)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Paper feed rubber
 - : Every 2,200,000 prints (Actual replacement cycle: Every 100,000 feeds)* 1
 - : Every 2,250,000 prints (Actual replacement cycle: Every 100,000 feeds)* 2
 - : Spot replacement (Actual replacement cycle: Every 100,000 feeds)* 3

* 1 C6501/C6501P/C65hc

* 2 1200/1200P/1051

* 3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Conduct the steps 1 to 9 in "[F.18.5.4 Replacing the pick-up rubber \(Lower stage\)](#)"
2. The subsequent operations are the same as the operations for the paper feed rubber (upper stage). (Refer to [F.18.5.2 Replacing the paper feed rubber \(Upper stage\)](#))
3. Reinstall a new paper feed rubber following the removal steps in reverse.
4. After replacing the part, be sure to reset the parts counter.

- No.240 (1250/1250P/1052)
- No.207 (1200/1200P/1051)
- No.206 (C8000/C7000/C7000P/C70hc/C6000)
- No.157 (C6501/C6501P/C65hc)

18.5.6 Replacing the separation rubber (lower stage)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Separation rubber
 - : Every 2,200,000 prints (Actual replacement cycle: Every 100,000 feeds) * 1
 - : Every 2,250,000 prints (actual replacement cycle: every 100,000 feeds) * 2
 - : Spot replacement (Actual replacement cycle: Every 100,000 feeds) * 3

* 1 C6501/C6501P/C65hc

* 2 1200/1200P/1051

* 3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Conduct the steps 1 to 9 in "F.18.5.4 Replacing the pick-up rubber (Lower stage)"
2. Remove 4 screws [1] and then remove the paper feed stopper plate /2 [2].
3. For the subsequent operations, conduct the separation rubber (upper stage) (steps 2 to 6). (Refer to F.18.5.3 Replacing the separation rubber (upper stage))
4. Replace it with a new separation rubber.
5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the part, be sure to reset the parts counter.
 - No.239 (1250/1250P/1052)
 - No.206 (1200/1200P/1051)
 - No.205 (C8000/C7000/C7000P/C70hc)
 - No.156 (C6501/C6501P/C65hc)

19. PERIODICAL MAINTENANCE PROCEDURE SD-506

19.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

19.2 Right angle conveyance section

19.2.1 Replacing the roller release solenoid /1 (SD5)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Roller release solenoid /1 (SD5)
: Every 20,250,000 prints *1 (actual replacement cycle: every 5,000,000 operations *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

15anf2c028na

15anf2c029na

15anf2c030nb

1. Remove SD from the main body.
2. Remove 3 screws [1] and remove the cover [2].

3. Disconnect the connector [1].
4. Remove 2 screws [2] and then remove the roller release solenoid /1 (SD5) [3].

Note

- When installing the solenoid, make sure that the pin [5] is hitched to the plunger [4].
- Install it with the wiring harness [6] located on the guide plate side.

5. With the plunger [1] pulled, temporarily hold the new roller release solenoid /1 and adjust the position so that the clearance "a" between the roller [3] and the guide plate [2] is at a standard value, and then fully tighten the screws.
Standard value "a": 0mm to 0.5mm
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the part, be sure to reset the parts counter.
 - No.264 (1250/1250P/1052)
 - No.226 (1200/1200P/1051)
 - No.239 (C8000)

19.2.2 Replacing the roller release solenoid /2 (SD6)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Roller release solenoid /2 (SD6)
: Every 20,250,000 prints *1 (Actual replacement cycle: every 5,000,000 operations *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Open the front door /Rt.
2. Remove 2 screws [1] and remove the cover [2].

3. Disconnect the connector [1].
4. Remove 2 screws [2] and then remove the roller release solenoid / 2 (SD6) [3].

Note

- When reinstalling it, be sure to check that the pin [5] has been inserted into the hole on the plunger [4].
- Install it with the wiring harness [6] located on the guide plate side.

5. With the plunger [1] pulled, temporarily hold the new roller release solenoid / 2 and adjust the position so that the clearance "a" between the roller [3] and the guide plate [2] is at a standard value, and then fully tighten the screws.
Standard value "a": 0mm to 0.5mm
6. Reinstall the preceding parts following the removal steps in reverse.

19.2.3 Replacing the right angle conveyance gate solenoid (SD2)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Right angle conveyance gate solenoid (SD2)
: Every 20,250,000 prints *1 (actual replacement cycle: every 5,000,000 operations *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Open the front door /Rt and then remove the screw [1].
2. Remove the rear cover /Rt. (Refer to [G.18.3.3 Rear cover /Rt](#))
3. Remove the hex wrench (short, #2.5) from the trimmer section. (Refer to [F.19.4.2 Replacing the trimmer blade kit](#))

4. Remove the E-ring [1] and the pulley [2] and then remove the belt [3].
5. Disconnect 3 connectors [4].

6. Remove the screw [1] and then remove the stopper [2].

7. Remove the screw [1] and then remove the stopper [2].
8. Pull the spring [3] in the arrow-marked direction [4] and release it, and then open the right angle conveyance guide plate [5].

Note

- When reinstalling the spring [3], hook the long arm [6] on the position between the frame and the E-ring [7] of the jam release handle shaft and insert the tip of the short arm [3] into the hole [8].

9. Remove 4 screws [1] and then remove the entrance conveyance unit [2].

Note

- When reinstalling, press it against 2 positioning pins [3] and then tighten the screw [1].

10. Check point when reinstalling the entrance conveyance unit

Note

- As the positioning pin [1] has anti-drop grooves, be sure to insert it fully before tightening the screw.

11. Disconnect the connector [1].

12. Remove 2 screws [2] and then remove the entrance gate solenoid [3] and the plunger [4].

a0h2t3c051ca

a0h2t3c045ca

a0h2t3c052ca

13. Standard value when reinstalling the entrance gate solenoid

Note

- When reinstalling, be sure to set in the following conditions before tightening the screw [4]; with the plunger of the entrance gate solenoid not pulled, the gap between the entrance gate [1] and the guide plate [2] is at a standard value "a", and with the plunger of the entrance gate solenoid pulled, the gap between the entrance gate [1] and the guide plate [3] is at a standard value "b".

Standard valuea: $2.0\text{mm} \pm 0.3\text{mm}$ b: $5.0\text{mm} \pm 0.5\text{mm}$

14. Disconnect the connector [1].

15. Remove 2 screws [2].

16. Remove 2 screws [3] and pull out the arm [4] from the shaft [5] in the arrow-marked direction [6]. Then remove the right angle conveyance gate solenoid assy [7].

Note

- When reinstalling, press the arm [4] against the D-cut of the shaft [5] and then tighten the screws [2].

17. Standard value when reinstalling the right angle conveyance gate solenoid assy

Note

- With the plunger [1] pulled, adjust the position so that the clearance "a" between the right angle conveyance gate [3] and the guide plate [2] is at a standard value "a", and then fully tighten the screws [4].

Standard value a: $4.8\text{mm} \pm 0.5\text{mm}$

18. Remove 2 screws [1], mounting plate [2], arm [3], plunger [4], and the right angle conveyance gate solenoid (SD2) [5].

Note

- When installing the right angle conveyance gate solenoid, make sure that the wires [6] are located on the other side of the hole [7] in the mounting plate [2].

19. Reinstall the preceding parts following the removal steps in reverse.

19.2.4 Replacing the roller release solenoid /3 (SD7)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Roller release solenoid /3 (SD7)
: Every 20,250,000 prints *¹ (actual replacement cycle: every 5,000,000 operations *²)

*¹ The periodical replacement is only for 1200/1200P/1051.

*² Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Open the front doors /Rt and /Lt.
2. Remove 2 screws [1] and remove the cover [2].

3. Disconnect the connector [1].
4. Remove 2 screws [2] and then remove the roller release solenoid / 3 (SD7) [3].

Note

- When installing the solenoid, make sure that the pin [5] is hitched to the plunger [4].
- Install it with the wiring harness [6] located on the guide plate side.

5. Slightly tighten the new roller release solenoid/3 with the plunger [1] pulled, adjust the position so that the gap between the paper feed surface [2] of the guide plate and the roller surface [3] falls within the standard value, and secure the roller release solenoid/3. Standard value "a": 1.3mm to 1.8mm
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the part, be sure to reset the parts counter.
 - No.264 (1250/1250P/1052)
 - No.226 (1200/1200P/1051)
 - No.239 (C8000)

19.3 Saddle stitching section

19.3.1 Replacing the stapler assy

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Stapler assy

: Every 20,250,000 prints *1 (Actual replacement cycle: Every 1,000,000 staples) *2

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C6501/C6501P/C65hc/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Remove the front door /Lt. (Refer to [G.18.3.8 Front door /Lt](#))
2. Remove the rear cover /Lt. (Refer to [G.18.3.2 Rear cover /Lt](#))
3. Disconnect 2 connectors [1] from the back side of the stapler, and release the wires on the stapler side from the clamps.

4. Pull out the saddle stitching unit. (Refer to [F.19.3.3 Pulling out the saddle stitching unit](#))
5. Tilt the bundle arm [1] to the front.
6. Remove the staple cartridges [2] to the front.

Note

- When moving the stapler assy, be sure to move them by rotating the rotating knob [3] to prevent the belt tooth from skipping. Otherwise, it causes the belt tooth skipping.

7. Remove 2 screws [1] on each stapler.
8. Move the staplers /Lt [2] and /Rt [3] forward, and then remove the pins [4], 2 for each, from each 2 holes [5] on each stapler. Then remove the staplers /Lt and /Rt downward.

a0h2t3c048ca

15anf2c038na

15anf2c039na

15anf2c040na

9. Check point when removing/reinstalling the stapler /Lt

Note

- When removing/reinstalling the stapler /Lt, be sure not to bend the guide sheet [6].

10. Remove the screw [1] and remove the sensor cover [2].

11. Disconnect the connector [1].

Note

- When reinstalling the saddle stitching unit, be careful not to let the connector [1] make contact with the main body.

12. Remove 3 screws [2], and then remove the saddle stitching guide plate [3].

13. Remove 2 screws [1] each and then remove 2 connector covers [2].

Note

- When removing the connector covers, while lifting up the clinchers /Lt [3] and /Rt [4].

14. Remove each 1 screws [1] and then remove the ground [2].

Note

- When installing the grounds, fasten it with screws letting the wiring harness on the lower side.

15. Remove each of 1 connectors [3].

16. Remove 2 screws [4] each, and then remove the clinchers /Lt [5] and /Rt [6].

Note

- When installing the clinchers, slide them down as far as they go, and secure them with screws.

17. Disconnect the connector [1] and then remove the wiring harness [3] from the clincher [2].

18. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the wiring harness [4], be sure to wire the wiring harness to the guide (white) side [5] of the clincher. Do not route the wiring harness to the rear side as shown in the figure [7]. or the wiring harness may break at the clincher operation.

19. Adjust the mounting position of the staplers and the clinchers. (Refer to [F.19.3.1.\(3\) Procedure for adjusting the mounting position](#))

20. After replacing the part, be sure to reset the parts counter.

- No.260, 261 (1250/1250P/1052)
- No.222, No.223 (1200/1200P/1051)
- No.234, 235 (C8000/C7000/C7000P/C70hc/C6000)

(3) Procedure for adjusting the mounting position

15anf2c063nc

1. Rotate the screw [1] clockwise until clicked to make the clinchers [2] contact with the staplers [3] and lock the clinchers [2], and then check the step edges [4] of the staplers are aligned with the edges [5] of the clincher in the sub scan direction [6].
Standard value: $0 \pm 0.5\text{mm}$
2. When the value is not within the standard value, loosen 2 screws [7] each and move the staplers in the sub scan direction for adjustment while rotating the screw [1] counterclockwise to make the clinchers [2] and the stapler [3] closer, and then tighten the screws [7].
3. Tighten the screw [1] clockwise until it clicks to make the clinchers [2] contact with the stapler [3] and lock it. Make sure that the standard surface of the stapler [8] is located in rear side in main scan direction [10] compared to the inside plate inner surface [9] of the clincher.
Standard value "a": 0.2mm to 0.3mm
4. When the value is not within the standard value, loosen 2 screws [11] each and move the staplers in the main scan direction for adjustment while rotating the screw [1] counterclockwise to make the clinchers [2] and the stapler [3] closer, and then tighten the screws [11].

Note

- After the reinstallation, perform the saddle stitching and check that the stapling is performed without problem.
- After the adjustment, be sure to perform the adjustment between the fold line position and the staple position, and tilt/gap adjustment of the clincher.
(Refer to [I.23.4 Staple position adjustment](#)), (Refer to [I.23.6 Tilt/gap adjustment of the clincher](#))

19.3.2 Replacing the slope unit**(1) Spotted replaced parts/cycle**

- Slope unit

: Spot replacement (Actual replacement cycle: every 2,500,000 copies) *1

*1 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

15anf2c018na

1. Remove 3 screws [1], and then remove the motor cover [2].

2. Disconnect 2 connectors [1].

3. Holding the bundle arms [1] on both sides in the vicinity of the fulcrum shaft [2], push them to the rear simultaneously and move the bundle arms [1] approximately 30mm.

Note

- When rotating the bundle arm [1] manually, be sure to rotate it gently with both hands because the bundle arm is driven simultaneously by the belts on both sides. Otherwise, it causes the belt tooth skipping.
- Never rotate the bundle arm [1] by holding its tip. Be sure to rotate it by holding the bundle arm [1] in the vicinity of the fulcrum shaft [2]. It causes the deformation.

4. Remove 2 screws [2] and 2 screws [3] of the slope unit [1] from the bottom and top respectively, and then remove the slope unit [1].

Note

- When reinstalling the slope, be sure to align 2 positioning projections [4].

5. Reinstall the preceding parts following the removal steps in reverse.

19.3.3 Pulling out the saddle stitching unit**(1) Procedure**

1. Remove the front door /Lt. (Refer to [G.18.3.8 Front door /Lt](#))
2. Remove the slope unit. (Refer to [F.19.3.2 Replacing the slope unit](#))
3. Remove the wire [1] from the screw [2].

Note

- When remove the 2nd wire [1], support the horizontal conveyance guide plate /Lt [3] with your hand so that it does not fall down.

4. Slide 2 pins [1] to the arrow-marked direction and hook into the notches [2] to release the horizontal conveyance guide plate /Lt [3], and then remove the guide plate.

Note

- When reinstalling the horizontal conveyance guide plate / Lt [3], align the positions of the shafts [4], and then displace the pins [1] from the notches.

5. Remove the screw [1], move the wiring harness cover [4] to the rear, unplug the pin [2] from the hole [3], and then remove the wiring harness cover [4].

15anf2c017na

6. Disconnect 6 connectors [1].

[1]

15anf2c069na

7. Remove the screw [1].

8. Holding the bundle arms [1] on both sides in the vicinity of the fulcrum shaft [2], gently move them to the inside [3], and then remove the guide shaft [4] from the hole of the shock absorbing guide [5].

Note

- When narrowing the space between the bundle arms [1], be sure to move them gently and simultaneously.
- When reinstalling them, be sure to check that the guide shaft [4] has been inserted into the shock absorbing hole [5].

9. Rotate the bundle arms [1] to the guide plate [6] on the stapler side.

[1]

[3]

[2]

[4]

[5]

[3]

[5]

[4]

[2]

[1]

15anf2c021na

10. Remove the 6 screws (with 1 washer each) [1], and then hold the shafts [2] to pull out the saddle stitching unit [3].

Note

- When pull out the saddle stitching unit, be sure not to snap the wiring harness of the removed connector contact with SD.

11. Reinstall the above parts following the removal steps in reverse.

19.3.4 Replacing the saddle stitching unit

⚠ CAUTION

- Be sure to perform this operation with 2 people because the saddle stitching unit is heavy.

(1) Spotted replaced parts/cycle

- Saddle stitch unit

: Spot replacement (Actual replacement cycle: every 2,500,000 copies) * 1

* 1 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Pull out the saddle stitching unit. (Refer to [F.19.3.3 Pulling out the saddle stitching unit](#))

2. Remove 6 screws [1] and the screw [2], and remove the saddle stitching unit [5] with 2 people by holding the shafts [3] and [4] while lift up the shaft [3] slightly and shift the saddle stitching unit to the front side.

Note

- Be sure to hold the saddle stitching unit at the shafts [3] and [4].
- When reinstalling the saddle stitching unit, check that the unit is surely placed on the rails [6] before releasing the unit.

3. Reinstall the preceding parts following the removal steps in reverse.

19.4 Trimmer section

19.4.1 Removing/installing the trimmer paddle assy

(1) Procedure

1. Remove the following parts.
 - Rear cover /Lt (Refer to [G.18.3.2 Rear cover /Lt](#))
2. Store the trimmer scraps box completely in the SD.
3. Remove 2 screws [1], and remove the trimmer scraps guide [2].

Note

- When installing the trimmer scraps guide, be sure that the trimmer scraps box is stored completely in the SD, and the trimmer scraps guide [2] is fully stretched. If you stretch the trimmer scraps guide with the trimmer scraps box has not stored completely, the trimmer scraps guide gets broken during operation.

4. Remove 4 screws [1] and remove the trimmer paddle assy [2].
5. Reinstall the above parts following the removal steps in reverse.

19.4.2 Replacing the trimmer blade kit

⚠ WARNING

- Pay extra caution when holding the trimmer blade [1]. Never touch the edge [2] of the blade. You get injured.
- Remove the blade cover only at the replacement. Otherwise, never remove the cover. You get injured.
- Dispose the used trimmer blade as specified by the local authority.

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Trimmer blade kit
 - : Every 1,400,000 prints (Actual replacement cycle: Every 37,500 cuts) *1
 - : Every 1,500,000 prints (Actual replacement cycle: Every 37,500 cuts) *2
 - : Spot replacement (Actual replacement cycle: every 37,500 cuts) *3

*1 C6501/C6501P/C65hc

*2 1200/1200P/1051

*3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Move the trimmer board to the release position.

Note

- Move the trimmer board to the trimmer press upper limit sensor (PS52) by the output check code ""71-56" in the I/O check mode in the service mode.

2. Turn OFF the sub power switch (SW2) and the main power switch (SW1) of the main body and unplug the power plug from the power outlet.
3. Remove the rear cover /Lt. (Refer to [G.18.3.2 Rear cover /Lt](#))
4. Remove the trimmer paddle assy. (Refer to [F.19.4.1 Removing/ installing the trimmer paddle assy](#))
5. Remove the screw [1].
6. Loosen the screws [2] and [3].

⚠ WARNING

- Do not loosen the screws [2] and [3] too much, or the trimmer blade drops during the operation. Keep the loosening amount of the screws [2] and [3] to a minimum requirement for removing the trimmer blade [4].

7. Hold the screws [2] and [3] and slightly lift the screw [3] side. Then move the trimmer blade [4] in the arrow-marked direction [6] to pull out from the hole [5], and remove it.
8. Put the trimmer blade [4] at a safe place with no fear of falling down.

⚠ WARNING

- Pay extra caution when handling the trimmer blade [4]. Never touch the edge [7] of the blade. You get injured.

9. Insert the #2.5 hex wrench [2] onto the mounting slit [1] of the trimmer blade, and then slide it from right [3] to left [4] (viewed from the operator) to clean the trimmer scraps.

Note

- Conduct the cleaning with the #2.5 hex wrench which is one-step thinner than the hex wrench #3 used for the installation screws of the trimmer blade. Using #3 causes the deformation of the mounting slit.
- To change the direction of the hex wrench, remove the wrench once and reinsert it again.
- The bottom of the slit of the left side [4] (viewed from the operator) is curved in the same manner as the blade [5]. Be sure to scrape the trimmer scraps.

10. Clean the mounting slit [1] of the trimmer blade with the blower brush.

11. Put a new trimmer blade [1] on the floor and insert 2 new screws about half and a bit length of them [3] into the marked side [2].

⚠ WARNING

- Be sure to insert the screws [3] enough to hold the trimmer blade, otherwise the trimmer blade falls down during the operation.

Note

- Install the brand-new screws [3] that are shipped with the trimmer blade kit.

12. Remove the blade cover [4] of the new trimmer blade kit and put that cover on the old trimmer blade.

13. Insert the trimmer blade to the hole [3] by holding 2 screws [2].
Then insert 2 screws [2] to the screw grooves [4].

14. Tighten the new screw [1] temporarily. Then press 2 screws [1] and [2] downward [3] until the trimmer blade [4] contacts the bottom, and then press it to the right side [5] (viewed from the operator).
15. Tighten 2 screws [1] and [2] with the #3 hex wrench [6].

⚠ WARNING

- When tightening 2 screws [1] and [2], tighten them temporarily with the torque that bends the tip of the #3 hex wrench [6] approximately 5° [7], and then fully tighten them with the strong torque that bends it approximately 15° [8].

Note

- Be sure to check and clear the foreign object that obstacles the operation of the trimmer blade.

16. Reinstall the preceding parts following the removal steps in reverse.

Note

- After replacing the trimmer blade, perform the saddle stitch with trimming and check that the trimming is performed without problem.

17. After replacing the part, be sure to reset the parts counter.

- No.262 (1250/1250P/1052)
- No.224 (1200/1200P/1051)
- No.229 (C8000/C7000/C7000P/C70hc/C6000)
- No.178 (C6501/C6501P/C65hc)

19.4.3 Replacing the trimmer board assy

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Trimmer board assy
 - : Every 600,000 prints (Actual replacement cycle: Every 18,900 cuts) *1
 - : Every 750,000 prints (Actual replacement cycle: Every 18,900 cuts) *2
 - : Spot replacement (Actual replacement cycle: every 18,900 cuts) *3

*1 C6501/C6501P/C65hc

*2 1200/1200P/1051

*3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Move the trimmer board to the release position.

Note

- By the output check code "71-97" in the I/O check mode in the service mode, move the trimmer press board to the position where the trimmer board is released.

2. Turn OFF the sub power switch (SW2) and the main power switch (SW1) of the main body and unplug the power plug from the power outlet.
3. Remove the rear cover /Lt. (Refer to [G.18.3.2 Rear cover /Lt](#))
4. Remove the trimmer paddle assy. (Refer to [F.19.4.1 Removing/installing the trimmer paddle assy](#))
5. Remove the trimmer board assy [1] by pulling it horizontally to the back side.

Note

- When reinstalling it, aligning the slit [2] of the trimmer board assy [1] with the pin [3] and insert it between the trimmer press plate [4] and the hold plate [5].
- When inserting it, be careful not to bend the guide sheet [6].
- When pushing it into the machine, be sure to insert it horizontally by pushing the movement arm receiver [7].

6. Clean the bottom surface of the actuator [1] and the top surface [2] of the trimmer blade retaining plate which contacts to the bottom surface.

Note

- When the trimmer scraps remain or the cleaning is not conducted properly, the trimmer completion timing differs and a trimming fault occurs.

7. Reinstall the preceding parts following the removal steps in reverse.
8. Reset the trimmer board solenoid operation counter.

Note

- Reset the trimmer board solenoid operation counter by the output check code "71-95" of the I/O check mode of the service mode.
- If the counter is not reset, the trimmer board solenoid operating timing after the trimmer board is replaced becomes faster than specified timing (700/500/300 times of trimming). (In the first operation only)
- After replacing the trimmer board, perform the saddle stitch with trimming and check that the trimming is performed without problem.

9. After replacing the part, be sure to reset the parts counter.

- No.263 (1250/1250P/1052)
- No.225 (1200/1200P/1051)
- No.230 (C8000/C7000/C7000P/C70hc/C6000)
- No.179 (C6501/C6501P/C65hc)

19.4.4 Replacing the trimming unit**Note:**

- Be sure to perform this operation with 2 people because the trimmer unit is heavy.

(1) Spotted replaced parts/cycle

- Trimmer unit

: Spot replacement (actual replacement cycle: every 2,500,000 cuts) *1

*1 1250/1250P/1052/1200/1200P/1051/C6501/C6501P/C65hc/C8000

(2) Procedure for pulling out the trimmer unit

- Remove the following parts.
 - Rear cover /Lt (Refer to [G.18.3.2 Rear cover /Lt](#))
 - Rear cover /Rt (Refer to [G.18.3.3 Rear cover /Rt](#))
 - Left cover (Refer to [G.18.3.4 Left cover](#))
 - Trimmer paddle assy (Refer to [F.19.4.1 Removing/installing the trimmer paddle assy](#))
- Remove each 4 of the screws [1] at 2 places, and then remove 2 fixing plates [2].

- Disconnect the connector [1].

Note

- When reinstalling it, be careful not to nip the wiring harness with the metal plate.

- Remove 6 screws [2].
- Pull out the trimmer unit to the back side until the stoppers [4] and [5] touch to the anti-drop brackets [6] and [7] by holding the configuration parts [3] of the trimmer unit.
- Reinstall the preceding parts following the removal steps in reverse.

(3) Removing/reinstalling the trimmer unit

- Conduct by the step 4 of the procedure for pulling out the trimmer unit (Refer to [F.19.4.4.\(2\) Procedure for pulling out the trimmer unit](#))

⚠ DANGER:

- Be sure not to pull out the trimmer unit to the back side until the stopper is removed. If the stopper is removed while the trimmer unit is pulled out to the back side, the trimmer unit drops.

- Disconnect 5 connectors [1] and then remove the wiring harness from the wiring harness clamp.

a0h2t3c021ca

3. Remove each 2 of the screws [1] at 2 places, and then remove the stoppers /1 [2] and /2 [3].
4. Pull out the trimmer unit [4] to the back side by holding the configuration parts [5].

Note

- Remove or reinstall the trimmer unit [4] by lifting it slightly to avoid the projection for preventing falling off [6] on the trimmer unit plate.
- Be sure not to hold the position that is easily damaged like the electrical parts.

⚠ Note:

- Be sure to perform this operation with 2 people because the trimmer unit is heavy.

5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the part, be sure to reset the parts counter.
 - No.270 (1250/1250P/1052)
 - No.234 (1200/1200P/1051)
 - No.233 (C8000)

19.4.5 Replacing the trimmer press motor (M32)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Trimmer press motor (M32)
- : Every 20,250,000 prints *1 (Actual replacement cycle: Every 500,000 cuts *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

a0h2t3c022ca

1. Pull out the trimmer unit. (Refer to [F.19.4.4 Replacing the trimming unit](#))
2. Disconnect the connector [1].
3. Loosen 4 screws [2].

Note

- When reinstalling it, be sure to tighten 4 screws [2] after making the tension of the spring [3] over the mounting plate [4].

4. Remove 4 screws [6] with keeping the trimmer press motor (M32) [5], and then remove it from the belt [7].

Note

- When reinstalling it, be sure to put the trimmer press motor (M32) [5] into the round hole [8].

5. Loosen the screw [1] and then remove the gear [2] from the trimmer press motor (M32) [3].
6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the part, be sure to reset the parts counter.
 - No.268 (1250/1250P/1052)
 - No.230 (1200/1200P/1051)
 - No.231 (C8000/C7000/C7000P/C70hc/C6000)

19.4.6 Replacing the trimmer blade motor (M31)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Trimmer blade motor (M31)
: Every 30,000,000 prints *¹ (Actual replacement cycle: Every 850,000 cuts *²)
- Trimmer blade motor (M31)
: Spot replacement (Actual replacement cycle: Every 2,500,000 feeds)*³

*¹ The periodical replacement is only for 1200/1200P/1051.

*² Actual replacement cycle of 1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

*³ Actual replacement cycle of 1250/1250P/1052

(2) Procedure (previous trimmer unit)

1. Remove the following parts.
 - Rear cover /Lt (Refer to [G.18.3.2 Rear cover /Lt](#))
 - Rear cover /Rt (Refer to [G.18.3.3 Rear cover /Rt](#))
 - Left cover (Refer to [G.18.3.4 Left cover](#))
 - Trimmer scraps guide (Refer to [F.19.4.1 Removing/installing the trimmer paddle assy](#))
2. Remove each 4 of the screws [1] at 2 places, and then remove 2 fixing plates [2].

3. Remove 2 screws [1] of the jig for supporting trimmer unit and then remove the anti-drop bracket [2].

4. Align the edge of the jig for supporting trimmer unit [1] with the corner [4] of the trimmer unit based on the hole [2] of the jig for supporting trimmer unit [1].

5. Disconnect the connector [1].

Note

- When reinstalling it, be careful not to nip the wiring harness with the metal plate.

6. Remove 2 screws [2] and then remove the stopper [3].
7. Reinstall the anti-drop bracket [5] with 2 screws [4] which have been removed in step 3.
8. Remove 6 screws [6].

⚠ DANGER:

- Be sure not to pull out the trimmer unit to the back side until the stopper [3] is removed. If the stopper is removed while the trimmer unit is pulled out to the back side, the trimmer unit drops.

9. Disconnect 5 connectors [1] and then remove the wiring harness from the wiring harness clamp.

10. Pull out the trimmer unit to the back side until the stoppers [3] touch to the anti-drop brackets [4] by holding the lower edges [2] of the trimmer unit [1].

Note

- Be sure not to hold the position that is easily damaged like the electrical parts.

11. Hold the lower right [2] of the trimmer unit [1], turn it around the engaging [3] of the stopper and the anti-drop bracket, and then put the trimmer unit [1] on the jig for supporting trimmer unit [4].

12. Disconnect the connector [1].

13. Remove 3 screws [1] and then remove the trimmer blade motor (M31) [2].

Note

- When reinstalling it, be sure to set so that the wiring harness [3] comes in the position as shown in the picture.

14. Check point when reinstalling the trimmer blade motor (M31)

Note

- When reinstalling it, be sure to insert the D-cut [1] of the shaft on the trimmer blade motor (M31) into the D-cut hole [2] of the planetary gear.

15. Remove 4 screws [1] and then remove the mounting bracket [3] from the trimmer blade motor (M31) [2].

Note

- When reinstalling it, be sure that the label [4] is in the same direction as the slotted hole [5] on the mounting bracket [3].

16. Reinstall the preceding parts following the removal steps in reverse.

17. After replacing the part, be sure to reset the parts counter.

- No.269 (1250/1250P/1052)
- No.231 (1200/1200P/1051)
- No.232 (C8000/C7000/C7000P/C70hc/C6000)

(3) Procedure (new trimmer unit)

1. Remove the rear cover /Lt. (Refer to [G.18.3.2 Rear cover /Lt](#))
2. Disconnect the connector [1].

3. Loosen 3 screws [1] and then remove the trimmer blade motor (M31) [2].

Note

- When reinstalling it, be sure to set so that the wiring harness [3] comes in the position as shown in the picture.

4. Check point when reinstalling the trimmer blade motor (M31)

Note

- When reinstalling it, be sure to insert the D-cut [1] of the shaft on the trimmer blade motor (M31) into the D-cut hole [2] of the planetary gear.

5. Remove 4 screws [1] and then remove the mounting bracket [3] from the trimmer blade motor (M31) [2].

Note

- When reinstalling it, be sure that the label [4] is in the same direction as the slotted hole [5] on the mounting bracket [3].

6. Reinstall the preceding parts following the removal steps in reverse.
7. After replacing the part, be sure to reset the parts counter.
 - No.269 (1250/1250P/1052)
 - No.231 (1200/1200P/1051)
 - No.232 (C8000/C7000/C7000P/C70hc/C6000)

19.4.7 Lubrication to the trimmer unit**(1) Periodic lubrication parts/cycle**

- Paper holding screw
 - : Every 1,400,000 prints (Actual lubrication cycle: Every 37,500 cuts) *1
 - : Every 1,500,000 prints (Actual lubrication cycle: Every 37,500 cuts) *2*3
- Drive gear /3, /4
 - : Every 20,250,000 prints (Actual lubrication cycle: Every 500,000 cuts) *2

*1 C6501/C6501P/C65hc

*2 1200/1200P/1051

*3 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure (previous trimmer unit)

1. Remove the rear cover /Lt. (Refer to [G.18.3.2 Rear cover /Lt](#))
2. Lubricate Molykote EM-30L to the paper holding screw [1].
3. Lubricate Molykote EM-30L to the drive gears /3 [2] and /4 [3].
4. Reinstall the preceding parts following the removal steps in reverse.

Note

- When applying the grease, be careful not to spill the grease to other parts.

(3) Procedure (new trimmer unit)

1. Pull out the trimmer unit. (Refer to [F.19.4.4.\(2\) Procedure for pulling out the trimmer unit](#))
2. Lubricate Molykote EM-30L to the paper holding screw [1].
3. Lubricate Molykote EM-30L to the drive gears /3 [2] and /4 [3].
4. Reinstall the preceding parts following the removal steps in reverse.

Note

- When applying the grease, be careful not to spill the grease to other parts.

19.5 Bundle processing section**19.5.1 Replacing the bundle press stage gear****(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Bundle press stage gear
: Every 20,250,000 prints *1 (Actual replacement cycle: Every 500,000 set (number of set of sheets exited to the bundle tray) *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 1250/1250P/1052/1200/1200P/1051/C6501/C6501P/C65hc/C8000/C7000/C7000P/C70hc/C6000 spotted replaced cycle

(2) Procedure

a0h2t3c028ca

a0h2t3c029ca

a0h2t3c030ca

1. Remove the following parts.
 - Rear cover /Lt (Refer to [G.18.3.2 Rear cover /Lt](#))
 - Left cover (Refer to [G.18.3.4 Left cover](#))
2. Rotate the jam cleaning knob [1] in the arrow-marked direction until it stops.

Note

 - When the jam cleaning knob [1] stops, be sure to check that the bundle registration plate [2] comes to the upper position [3] after the bundle press stage goes down and the tension of the wire [4] is released.
 - Be sure not to rotate the jam cleaning knob too much.
3. Remove the E-ring [5] and move the gear [8] to the back side after moving the bearings [6] and [7].

4. Disconnect the connector [1].
5. Remove 2 screws [2] and then remove the bundle press stage up down motor (M24).

Note

- Be careful not to lose the pin [3] as it drops off when removing the gear [2].

6. Remove the E-ring [1], and then remove the bundle press stage gear [2] and 2 bearings [3] on both sides of the gear.

Note

- After replacing the bundle press stage gear [2], be sure to apply plas guard No.2 to the gear.

7. Reinstall the preceding parts following the removal steps in reverse.
8. After replacing the part, be sure to reset the parts counter.
 - No.267 (1250/1250P/1052)
 - No.229 (1200/1200P/1051)
 - No.242 (C8000/C7000/C7000P/C70hc/C6000)

19.5.2 Replacing the bundle press stage unit**(1) Spotted replaced parts/cycle**

- Bundle press stage unit

: Spot replacement (Actual replacement cycle: every 2,500,000 copies (number of set of sheets exited to the bundle tray)) *1

*1 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

[1] a0h2t3c031ca

a0h2t3c032ca

1. Remove the following parts.
 - Rear cover /Lt (Refer to [G.18.3.2 Rear cover /Lt](#))
 - Rear cover /Rt (Refer to [G.18.3.3 Rear cover /Rt](#))
 - Left cover (Refer to [G.18.3.4 Left cover](#))
 - Trimmer unit (Refer to [F.19.4.4 Replacing the trimming unit](#))
2. Rotate the jam cleaning knob [1] in the arrow-marked direction until it stops.

Note

- When the jam cleaning knob [1] stops, be sure to check that the bundle registration plate [2] comes to the upper position [3] after the bundle press stage goes down and the tension of the wire [4] is released.
- Be sure not to rotate the jam cleaning knob too much.

3. Disconnect the connector [1].
4. Remove the wiring harness [2] from the clamp [3], and then pull it out from the hole [4] by following the arrow.

Note

- When reinstalling it, be careful not to nip the wiring harness [2] with the trimmer unit plate [5].

5. Remove 1 each of the screws at 2 places and remove 1 each of the up-down wire [2], and then take it out to the front side of the machine from the trimmer unit plate [3] by following the arrow.

Note

- When reinstalling it, be sure to lubricate Molykote EM-30L to each 2 shafts [4].

6. Remove 8 screws [5] and then remove the trimmer unit plate [3].

Note

- Be careful not to damage the trimmer scraps guide [6].
- When reinstalling it, be sure to align the projection [7].

7. Disconnect the connector [1] and remove the wiring harness [2] from clamp [3], and then take it out from the hole [4] of the metal plate to the arrow-marked direction.
8. Remove 2 screws [5] and then remove the bracket [6].
9. Remove 2 screws [7] and then remove the guide plate [8].

a0h2t3c035ca

10. Disconnect the connector [1].
11. Remove 3 screws [2] and then remove the bundle registration motor (M12) [3].
12. Disconnect the connector [4].
13. Remove 4 screws [5] and then remove the bundle press movement motor (M17) [6].

a0h2t3c036ca

14. Remove the E-ring [1] and then remove the gear [2] and the pin [3].
15. Remove the E-ring [4] and then remove the gear [5] and the pin [6].

16. Disconnect 3 connectors [1].
17. Cut the wire binding bands [2] and [3] and remove the wiring harness [4].

Note

- Be sure to let the wire binding bands [2] and [3] into the shaft hole [5] and install the wire retaining band [6] on the [2] side between the bands [2] and [3].

18. Pull out the bundle paper exit tray [1].
19. Remove 2 screws [2] and then remove the wire mounting plate /Lt [3].

Note

- Since the wire /Lt [4] has the tension of the spring, be sure to remove 2 screws [2] with keeping the wire mounting plate /Lt [3] and lift it up until the tension is released, and then take it off gently.

20. Loosen the screws [5] and pull the wire mounting plate /Rt [6] downward to move it to the opposite side of the shaft [7], and then remove it to the space between the side plate [8] and the timing belt [9].

Note

- Since the wire /Rt [10] has the tension of the spring, be sure to lift up the wire mounting plate /Rt [6] until the tension is released, and then take it off gently.

21. Check point when reinstalling the wire

Note

- When reinstalling it, be sure to put the wire [1] on 2 pulleys [2].

22. Push the bundle paper exit tray [1] fully to the back.
23. Remove 2 E-rings [2] and then remove 2 bearings [3] and the drive shaft [4].
24. Remove 2 E-rings [5] and then remove the bearings [6].

25. While keep holding the bundle paper exit assist roller [1] horizontally, push the bundle press stage unit [3] to the back with holding the shaft [2] to release the roller pin [4] of the bundle paper exit assist roller arm from the regulation bracket [5]. After the release, put down the bundle paper exit assist roller [1] gently.

Note

- Once the roller pin [4] of the bundle paper exit assist roller arm is removed from the regulation bracket [5], the bundle paper exit assist roller drops off. Therefore, be sure to hold with hands.
- When reinstalling, be sure to put the roller pin [4] under the regulation bracket [5].

26. Pull out the bundle paper exit tray [1] to about half.

Note

- If the bundle paper exit tray [1] is pulled out too much, the bundle press stage unit [2] drops off from the tray.

27. Pull out the bundle press stage unit [2] to the position in the picture with holding the bundle press section [3]. Then, pull it out more to the back with paying attention to the contacting places [5], [6], and [7] on the right side, and remove the arm [8].
28. Reinstall the preceding parts following the removal steps in reverse.

Note

- After the installation, be sure to check that the bundle press stage unit goes up and down horizontally by rotating the jam cleaning knob.

20. PERIODICAL MAINTENANCE PROCEDURE PB-503

20.1 Sub compile (SC) section

20.1.1 Precautions on maintenance

⚠ CAUTION

- Be sure to unplug the power plug of the PB from the power outlet.
- Make sure to unplug the power code of the main body from the power outlet when it is connected to the main body.

20.1.2 Replacing the switchback roller

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Switchback roller
 - : Every 750,000 prints ^{*1} (Actual replacement cycle: Every 600,000 cuts)
 - : Spotted replacement (Actual replacement cycle: Every 600,000 prints) ^{*2}
 - : Spotted replacement (Actual replacement cycle: Every 750,000 prints) ^{*3}

^{*1} 1200/1200P/1051

^{*2} C8000/C7000/C7000P/C70hc/C6000

^{*3} 1250/1250P/1052

(2) Procedure

a075f2c001ca

a075f2c002ca

1. Open the upper door [1] to open the SC door [2]. Then close the upper door [1].

Note

- To keep the SC door open, insert a screwdriver into the hole [3]. Be sure to remove the screwdriver when closing the sub clamp door, or the cover gets damaged.

2. Remove the 2 C-clips [4], and slide the 2 bearings [5] into the inside.

Note

- Before removing the C-clips, be sure to spread a sheet of paper and so on under the switchback roller assy to prevent the C-clips from dropping into inside of the machine.

3. Release the pulley [7] from the belt [6] gently, and remove the switchback roller assy [8].

4. Check point when reinstalling the switchback roller assy

Note

- After reinstalling the switchback roller assy, use a mirror to check that the belt [1] is properly looped over the pulley [2] without any slackness. If the belt has comes off the pulley, remove the SC cover /Up to correct that. (Refer to [G.19.2.12 SC cover /Up](#))

5. Remove the E-ring [1], and remove the roller [2] and the pin [3].
6. Remove the bearing [4].

Note

- Be sure to install the bearing [4] so that its collar faces toward the switchback roller.

7. Remove the E-ring [5], slide the switchback roller [8] in the direction of the arrow [6] (toward the pulley) and remove the pin [7]. Then remove the switchback roller [8] in the direction of the arrow [9].
8. Reinstall the preceding parts following the removal steps in reverse.
9. After replacing the part, be sure to reset the parts counter.
 - No.275 (1250/1250P/1052)
 - No.239 (1200/1200P/1051)
 - No.299 (C8000/C7000/C7000P/C70hc/C6000)

20.1.3 Replacing the SC switchback release motor (M13) and the one-way clutches /A and /B

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- SC switchback release motor (M13)
 - : Every 6,000,000 prints *¹ (Actual replacement cycle: Every 3,000,000 prints *²)
 - : Spot replacement (Actual replacement cycle: Every 750,000 prints *²)
- One-way clutch /B
 - : Spot replacement (Actual replacement cycle: Every 6,000,000 prints *²)
- One-way clutch /A
 - : Every 12,000,000 prints *¹ (Actual replacement cycle: Every 6,000,000 cuts *²)

*¹ Periodical replacement only for 1200/1200P/1051. C8000 is not supported.

*² Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove the SC cover /Up. (Refer to [G.19.2.12 SC cover /Up](#))
2. Open the upper door [1] to open the SC door [2] and set the paper [3].
3. Close the SC door [2].

Note

- Before removing the C-clips, be sure to spread a sheet of paper under the switchback roller assy to prevent the C-clips from dropping into the machine inside.

a0v9t3c021ca

4. Remove the screw [1] and remove the switchback cam [2].

Note

- The switchback cam [2] is tensioned by the spring [4] via the switchback arm [3]. When removing the screw [1], the switchback arm [3] is pulled by the spring [4] and the switchback cam [2] moves. At this time, be careful not to drop the screw [1].

a0v9t3c022ca

5. Check point when reinstalling the switchback cam

Note

- When reinstalling the switchback cam [2], be sure to install it following the positional relation with the actuator [2] as shown in the picture.

a0v9t3c023ca

6. Remove 2 E-rings [1] and remove 2 bearings [2].

7. Remove 2 springs [3].

a0v9t3c024ca

8. Disconnect 3 connectors [1] and remove the wiring harness from 2 wiring harness clamps [2].

9. Remove 2 screws [1] and remove the SC switchback release motor assy [2].

10. Remove 2 screws [1] and remove the SC switchback release motor [2].

11. Remove the E-ring [1] and remove the one-way clutch /B [2].

12. Check point when reinstalling the one-way clutch /B

Note

- When reinstalling the one-way clutch /B [1], be sure to install it in the direction shown in the picture.

13. Remove the screw [1] and remove the pressure cam [2].
 14. Remove the E-ring [3] and remove the one-way clutch /A [4].
 15. Reinstall the preceding parts following the removal steps in reverse.
 16. After replacing the part, be sure to reset the parts counter.
- No.272 (1250/1250P/1052)
 - No.236 (1200/1200P/1051)
 - No.296 (C8000)

a0v9t3c030ca

17. Check point when reinstalling the pressure cam

Note

- When reinstalling the pressure cam [1], be sure to install it following the positional relation with the actuator [2] as shown in the picture.

a0v9t3c033ca

18. Check point when reinstalling the one-way clutch /A

Note

- When reinstalling the one-way clutch /A [1], be sure to install it in the direction shown in the picture.

a0v9t3c004ca

19. Standard value when reinstalling the SC switchback release motor assy

Note

- When reinstalling the SC switchback release motor assy, be sure to set so that the distances "a" and "b" become same value.

Standard value: The difference of distances "a" and "b" = 0.2mm or less

20.1.4 Replacing the SC pressure arm solenoid (SD13)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- SC pressure arm solenoid (SD13)

: Every 20,250,000 prints *1 (Actual replacement cycle: Every 5,000,000 cuts *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

a0v9t3c005ca

1. Remove the SC unit. (Refer to [G.19.2.21 SC unit](#))**Note**

- When putting down the SC unit, be sure not to pin the wiring harness under it.
- Put the SC unit on a table so that the bottom surface of the sub scan alignment unit [1] does not contact the floor.

2. Pull out the sub scan alignment unit [1] in the arrow-marked direction.

3. Disconnect the connector [1].
4. Remove 2 screws [2] and remove the SC pressure arm solenoid (SD13) [3].
5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the part, be sure to reset the parts counter.
 - No.274 (1250/1250P/1052)
 - No.238 (1200/1200P/1051)
 - No.298 (C8000)

7. Standard value when reinstalling the SC pressure arm solenoid (SD13)

Note

- When reinstalling the SC pressure arm solenoid, adjust the position so that the distance "a" obtains a standard value with the plunger [1] pulled, and then fix with the screw [2].

Standard value: $a = 16.4 \pm 1\text{mm}$

20.1.5 Replacing the FD alignment solenoid (SD11)**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- FD alignment solenoid (SD11)

: Every 20,250,000 prints ^{*1} (Actual replacement cycle: Every 5,000,000 cuts ^{*2})

^{*1} The periodical replacement is only for 1200/1200P/1051.

^{*2} Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove the SC unit. (Refer to [G.19.2.21 SC unit](#))

Note

- When putting down the SC unit, be sure not to pin the wiring harness under it.
- Put the SC unit on a table so that the bottom surface of the sub scan alignment unit [1] does not contact the floor.

2. Remove 4 screws [1] and remove the SC door [2].

3. Put the SC unit with the FD alignment solenoid assy [4] faced up.

Note

- Put the SC unit on a table so that the SC switchback release motor assy [3] does not contact the floor.

4. Remove 2 springs [1].
5. Remove 2 screws [3] and pull out 2 shafts, and then remove the sub scan alignment plate [2].

6. Remove the E-ring [1] and remove the sub scan alignment arm [2].
7. Disconnect the connector [3] and remove the screw [4], and then remove the FD alignment solenoid assy [5].

Note

- When removing the FD alignment solenoid assy, be careful not to drop the pin.

8. Remove 2 screws [1] to remove the mounting plate [2], and then remove the FD alignment solenoid (SD11) [3].

Note

- When reinstalling the FD alignment solenoid, adjust the position so that the distance "a" obtains a standard value with the plunger [4] pulled.

Standard value: $a = 17.5 \pm 0.5\text{mm}$

9. Reinstall the preceding parts following the removal steps in reverse.
10. After replacing the part, be sure to reset the parts counter.
 - No.273 (1250/1250P/1052)
 - No.237 (1200/1200P/1051)
 - No.297 (C8000)

20.1.6 Lubrication to the sub scan alignment plate shaft

(1) Periodic lubrication parts/cycle

- Sub scan alignment plate shaft
- : Every 750,000 prints *1

*1 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

a15xt3c001ca

1. Remove the PB left unit. (Refer to [G.19.2.23 PB left unit](#))
2. Remove the upper cover /Md. (Refer to [G.19.2.21 SC unit](#))
3. Pull out the clamp unit [1].
4. Apply plas guard No.2 to the 4 sub scan alignment plate shafts [2].
5. Reinstall the preceding parts following the removal steps in reverse.

20.2 Cover paper table section**20.2.1 Precautions on maintenance****⚠ CAUTION**

- Make sure to unplug the power cord of the main body from the power outlet when it is connected to the main body.
- The glue tank unit is extremely hot right after turning OFF the main power switch (SW1) or the sub power switch (SW2) of the main body. To prevent burn injuries, leave the unit until it cools enough before performing the maintenance work.

Note

- Before performing the maintenance work, be sure to carry out the initial operation so that each part/unit is at the home position.

20.2.2 Replacing the roller cutter blade assy**(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Roller cutter blade assy

: Every 10,500,000 prints *1 (Actual replacement cycle: Every 100,000 cuts *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Remove the PB from the main body.
 2. Remove the conveyance unit /Lw. (Refer to [G.19.2.26 Conveyance unit /Lw](#))
 3. Remove 2 screws [1] and the roller cutter blade assy [2]. Then disconnect the connector [3].
- Note**
- Pull out the cover paper waste box before removing the roller cutter assy.
 - When reinstalling the roller cutter assy, be sure to route the wire binding [4] under the cutter motor (M50) [5].
 - Push the roller cutter blade assy [2] against the metal plate [6] to reinstall the assy.
4. Reinstall the preceding parts following the removal steps in reverse.
 5. After replacing the part, be sure to reset the parts counter.
 - No.280 (1250/1250P/1052)
 - No.244 (1200/1200P/1051)
 - No.304 (C8000/C7000/C7000P/C70hc/C6000)

20.2.3 Cleaning the cover paper folding plate and the book spine backing plate**(1) Periodically cleaned parts/cycle**

- Cover paper folding plate and the book spine backing plate
- : Every 750,000 prints*¹

*1 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Simplified cleaning procedure

a075f2c004cb

1. Carry out the I/O check in service mode in the order of following output check code, and turn OFF the sub power switch (SW2) and the main power switch (SW1) with the cover paper folding plate opened.
"77-55", "77-45", "77-58", "77-61"
2. Clean the cover paper folding plate [1] and the book spine backing plate [2].

20.2.4 Lubrication to the cover paper alignment plate shaft**(1) Periodic lubrication parts/cycle**

- Cover paper alignment plate shaft
: Every 750,000 prints *1

*1 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

a075f2c094ca

1. Turn the knob [1] to move the cover paper alignment plate inward.
2. Apply plas guard No.2 to the 4 cover paper alignment plate shafts [2].

Note

- Apply plas guard No.2 to the outside of the cover paper alignment plate bearing on both sides [3].

20.3 Cover paper supply section**20.3.1 Removing/reinstalling the pick-up roller assy and the separation roller assy****(1) Procedure**

a15xt3c002ca

1. Open the front door [1].
2. Unlock the cover paper tray [3] by slightly pushing up the cover paper tray lock lever [2] with a screwdriver or a similar tool, and pull out the cover paper tray [3].

3. Turn the pick-up roller [1] in the direction of the arrow (counterclockwise as seen from the front side) to make the coupling [2] upright.

Note

- Be sure not to rotate the pick-up roller [1] against the direction of the arrow (clockwise) forcibly, as the roller is not designed to rotate in that direction.

4. Remove 2 C-clips [3].

5. Remove the bearing /Fr [1].
6. Move the bearing /Rr [2] to the rear side.

Note

- When reinstalling them, insert the bearing /Rr [2] into the notch [5] on the metal frame while keeping on the level the flat face [4] of the bearing, and slightly pressing down the metal frame [3] of the pick-up roller assy. Then insert the bearing /Fr [1] in the same manner.

a075f2c011ca

7. Hold the pick-up roller assy [1] by hand and lift and tilt the paper feed roller [3] so that it rotates on the shaft [2] of the pick-up roller to remove it from the notch of the bearing [4] and the coupling [5].

Note

- When removing the pick-up roller assy [1], be careful not to damage the sensor [7] with the metal frame [6].

a075f2c081ca

8. Remove the pick-up roller shaft [2] from the arm [1] of the paper feed guide plate and then remove the pick-up roller assembly [3].
9. Reinstall the above parts following the removal steps in reverse.

Note

- After installing the pick-up roller assy, rotate the pick-up roller counterclockwise as seen from the front side.
- Make sure the paper feed roller and the belt rotate smoothly.
- The pick-up roller rotates in counterclockwise direction only. Be sure not to rotate it in the opposite direction.

10. Remove 2 screws [1] and then remove the entrance guide plate [2].

11. Remove 2 screws [1].

12. Open the frame [1] of the separation roller assy in the direction of the arrow, and remove the coupling pin [2] on the rear side from the joint [3]. Then remove the separation roller assy [4].

Note

- When reinstalling, make sure to engage the coupling pin [2] with the joint [3].
- When reinstalling the separation roller assy [4], fasten it with the screws while pressing it down.

13. Reinstall the above parts following the removal steps in reverse.

20.3.2 Replacing the pick-up roller and the paper feed roller

(1) Spotted replaced parts/cycle

- Pick-up roller
 - : Spot replacement (Actual replacement cycle: Every 500,000 feeds)*1
- Paper feed roller
 - : Spot replacement (Actual replacement cycle: Every 500,000 feeds)*1

*1 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure**Note**

- The outward appearance of the collar is identical for the paper feed roller and the separation roller. However, the collar of the paper feed roller has a one-way mechanism on the inside while the collar of the separation roller does not. Be careful not to confuse one with the other.

1. Remove the pick-up roller assembly. (Refer to [F.20.3.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
2. Remove the C-clip [1] of the pick-up roller assy.
3. Slide 2 bearings [2] and remove the pick-up roller [3] together with the shaft [4].

4. Remove the bearing [1] and pull out the pick-up roller [2] from the shaft [3].
5. Remove the pick-up roller [2] from the collar [4].
6. Replace the pick-up roller.

7. Remove the C-clip [1] and pull out the bearing /Fr [2] from the shaft [3].
8. Move the bearing /Rr [4] and remove the paper feed roller [5] together with the shaft [3].

9. Remove the C-clip [1].
10. Pull out the paper feed roller [3] from the collar [2].
11. Replace the pick-up roller [3].

12. Reinstall the preceding parts following the removal steps in reverse.

Note

- There is no big difference in appearance between the 2 collars (one for the paper feed roller, and the other one is for the separation roller). However, they are different in the inside. The collar [1] for the paper feed roller has a one-way mechanism in it, and the other one [2] does not. Make sure to attach them correctly.

13. After replacing the part, be sure to reset the parts counter.
 - No.276, No.277 (1250/1250P/1052)
 - No.240, No.241 (1200/1200P/1051)
 - No.300, No.301 (C8000)

20.3.3 Replacing the separation roller**(1) Spotted replaced parts/cycle**

- Separation roller

: Spot replacement (Actual replacement cycle: Every 500,000 feeds)*1

*1 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove the separation roller assy. (Refer to [F.20.3.1 Removing/reinstalling the pick-up roller assy and the separation roller assy](#))
2. Remove the C-clip [1] and remove the separation roller [3] together with the shaft [2].

3. Pull out the gear [2], the collar [3] and the separation roller [4] from the shaft [1] in the direction of the arrow.
4. Replace the separation roller [4].
5. Reinstall the preceding parts following the removal steps in reverse.

Note

- There is no big difference in appearance between the 2 collars (one for the paper feed roller, and the other one is for the separation roller). However, they are different in the inside. The collar [5] for the paper feed roller has a one-way mechanism in it, and the other one [6] does not. Make sure to attach them correctly.

6. After replacing the part, be sure to reset the parts counter.
 - No.277 (1250/1250P/1052)
 - No.241 (1200/1200P/1051)
 - No.301 (C8000)

20.3.4 Replacing the cover paper feed clutch (CL71) and the cover paper separation clutch (CL72)**(1) Spotted replaced parts/cycle**

- Cover paper pick up clutch (CL71)

: Spot replacement (Actual replacement cycle: Every 3,000,000 feeds)*1

- Cover paper separation clutch (CL72)

: Spot replacement (Actual replacement cycle: Every 3,000,000 feeds)*1

*1 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

a075f2c019ca

a075f2c020ca

1. Remove the stopper screws, 1 each, attached on the right and left rails of the cover paper tray and pull out the tray. (Refer to [G. 19.2.28 Cover paper tray](#))
2. Remove the 5 screws [1] and remove the clutch cover [2].

3. Disconnect 3 connectors [1].
4. Remove the C-clips [2], 1 each, and remove the cover paper feed clutch (CL71) [3] and the cover paper separation clutch (CL72) [4].

Note

- When reinstalling, be sure to insert the stopper [5] of the clutch over the tab [6] of the metal frame.

5. Reinstall the preceding parts following the removal steps in reverse.
6. After replacing the part, be sure to reset the parts counter.
 - No.278, No.279 (1250/1250P/1052)
 - No.242, No.273 (1200/1200P/1051)
 - No.302, No.303 (C8000)

20.4 Conveyance section**20.4.1 Replacing the sub tray exit solenoid (SD4)****(1) Periodically replaced parts/Spotted replaced parts/Cycle**

- Sub tray paper exit solenoid (SD4)

: Every 10,500,000 prints *1 (Actual replacement cycle: Every 3,000,000 prints *2)

*1 The periodical replacement is only for 1200/1200P/1051.

*2 Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Remove the PB from the main body.
2. Remove the PB left unit. (Refer to [G.19.2.23 PB left unit](#))
3. Remove the upper cover /FrRt. (Refer to [G.19.2.13 Upper cover / FrRt](#))
4. Remove the upper cover /RrRt. (Refer to [G.19.2.15 Upper cover / RrRt](#))
5. Remove the rear cover /Rt. (Refer to [G.19.2.5 Rear cover /Rt](#))
6. Remove 2 screws [1] and remove the metal frame [2].
7. Remove 6 screws [3] and disconnect the connectors [4] and [5].
8. Disconnect the connector [6].
9. Remove the screws of 3 knobs [7] and remove the knobs.
10. Remove 2 screws [9] and remove the metal frame [10].
11. Remove 6 screws [8] and remove the conveyance unit [11].

Note

- Put the conveyance unit on a table so that the paper entrance guide does not contact the floor.

12. Loosen the screws [1], 2 each, on the upper cover /Rt, and remove the upper cover /Rt.

13. Disconnect the connector [1].
14. Remove 3 screws [2] and remove the sub tray exit solenoid assy [3].

a0v9t3c016ca

a0v9t3c017ca

a0v9t3c018ca

a0v9t3c019ca

15. Remove 2 screws [1] and remove the sub tray exit solenoid assy (SD4) [2].
16. Reinstall the preceding parts following the removal steps in reverse.
17. After replacing the part, be sure to reset the parts counter.
 - No.271 (1250/1250P/1052)
 - No.235 (1200/1200P/1051)
 - No.295 (C8000/C7000/C7000P/C70hc/C6000)

18. Standard 1 value when reinstalling the sub tray exit solenoid assy (SD4)
 - When reinstalling the sub tray exit solenoid [1], adjust the position so that the distance "a" obtains a standard value with the plunger [2] pulled.
Standard value: $a = 3.7 \pm 0.5\text{mm}$

19. Standard 2 value when reinstalling the sub tray exit solenoid assy (SD4)
 - While pulling the plunger of the sub tray exit solenoid, adjust the position so that the distance "a" (the distance between the paper exit roller and the paper exit driven roller) obtains a standard value.
Standard value: $a = 0 \pm 1.5\text{mm}$

20. Check point when reinstalling the conveyance unit
 - After reinstalling the conveyance unit, check the points "a" shown in the picture, to see that the conveyance unit does not contact the upper door. When they are in contact, loosen 4 fixing screws on the upper cover /Rt and adjust the position so that the upper door and the upper cover /Rt does not come in contact.

20.5 Framework section

20.5.1 Replacing the exhaust filters /A and /B

(1) Spotted replaced parts/cycle

- Exhaust filter /A
: Spot replacement (Actual replacement cycle: Every 120 hours of rotation of glue apply roller)*1
- Exhaust filter /B
: Spot replacement (Actual replacement cycle: Every 240 hours of rotation of glue apply roller)*1

*1 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

a15xt3c003ca

a15xt3c004ca

a15xt3c005ca

1. Remove the exhaust filter assy [1].

2. Pull the filter holding lever [1] in the arrow-marked direction, and then remove 2 exhaust filters /A [2].

3. Reverse the exhaust filter assy and slide the exhaust filter /B [1] in the arrow-marked direction to remove it.

4. Reinstall the preceding parts following the removal steps in reverse.

5. After replacing the part, be sure to reset the parts counter.

- No.283, No.284 (1250/1250P/1052)
- No.250, No.251 (1200/1200P/1051)
- No.305, No.306 (C8000/C7000/C7000P/C70hc/C6000)

20.6 Glue tank section**20.6.1 Replacing the glue apply roller drive gear bearing****(1) Periodically replaced parts/cycle**

- Glue apply roller drive gear bearing

: Every 30,000,000 prints ^{*1} (Actual replacement cycle: Every 6,000 hours) ^{*2}

^{*1} The periodical replacement is only for 1200/1200P/1051.

^{*2} Actual replacement cycle of 1250/1250P/1052/1200/1200P/1051/C8000

(2) Procedure

1. Remove the glue tank unit. (Refer to [G.19.2.20 Glue tank unit](#))
2. Remove 6 screws [1] and remove the tank cover /Lt [2].

3. Loosen the screw [1] and remove the gear cover [3] from the notch [2].

Note

- When reinstalling, be sure to put the gear cover edge [3] into the notch [2].

4. Remove the 4 screws [1].

Note

- When reinstalling the slope, be sure to align 4 positioning projections [2].

5. Remove 2 E-ring [1].
6. Pull up the glue tank assy by holding the shaft [2], and remove the glue apply roller drive gears /1 [3] and /2 [4] and the bearings [5], 2 for each.
7. Reinstall the preceding parts following the removal steps in reverse.

20.6.2 Lubrication to the glue apply roller drive gear

(1) Periodic lubrication parts/Cycle

- Glue apply roller drive gear
- : Every 750,000 prints*1

*1 1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Open the front door and move the glue tank unit [1] frontward.
Note
 - When moving the glue tank unit, be sure to hold it by the metal frame [2] on the right side of the unit.
2. Remove the screw [1] and then remove the gear cover [4].
Note
 - When reinstalling, be sure to put the edge of the gear cover [4] under the notch [5] of the glue tank side.

a15xt3c011ca

3. Apply the multitemp FF-RM to the Glue apply roller drive gear [2].
4. Reinstall the above parts following the removal steps in reverse.

20.6.3 Replacing the pellet supply cooling fan (FM4)

(1) Periodically replaced parts/Spotted replaced parts/Cycle

- Pellet supply cooling fan (FM4)
 - : Every 750,000 prints *1
 - : Spot replacement (Actual replacement cycle: Every 120 hours) *2

*1 1200/1200P/1051

*2 1250/1250P/1052/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

8050ma3141

1. Remove the rear cover /Rt. (Refer to [G.19.2.5 Rear cover /Rt](#))
2. Disconnect the connector [1].
3. Remove 2 screws [2] and remove the pellet supply cooling fan (M4) [3].
4. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling the pellet supply cooling fan (FM4) [3], be sure to reinstall it to the same direction as shown in the picture.
- Be sure not to nip the wiring harness.

20.6.4 Replacing the glue tank assy

(1) Spotted replaced parts/cycle

- Glue tank assy
 - : Spot replacement (Actual replacement cycle: Every 2,000 hours) *1

*1 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

[2] a15xt3c012ca

1. Remove the glue tank unit. (Refer to [G.19.2.20 Glue tank unit](#))
2. Remove 2 screws [1] and then remove the wiring mounting cover [2].

[3] [5] a15xt3c013ca

3. Remove 2 screws [1], and then remove the glue thread cut plate [2].
4. Remove 6 screws [3] and remove the tank cover /Lt [4].
5. Remove 4 screws [5] and remove the tank cover /Rt [6].

Note

- When reinstalling it, reinstall it so that the curved part comes top.

a15xt3c014ca

a15xt3c015ca

a15xt3c016ca

6. Disconnect 4 connectors [2] of the translucent wiring harnesses of the temperature sensor.

Note

- When reconnecting the connector, check the color of the connector and the number label [3] on the wiring harness, and connect each connector to the corresponding wiring harness.

Number	Color
1	White
2	Blue
3	Yellow
4	Black

7. Remove the connector [4] from the metal frame [5].

Note

- When reinstalling it, be sure to set the metal wiring harness [6] toward the metal plate side [7].

8. Remove the square saddle [8] from the metal frame [7] and put the connector [4] to the inside of the glue tank unit.

9. Remove the wiring harness [1] from the 4 wire saddles [2].

10. Remove 4 screws [2] and remove the glue tank assy [1].

Note

- When reinstalling the slope, be sure to align 4 positioning projections [3].

11. Reinstall the preceding parts following the removal steps in reverse.

Note

- When reinstalling it, be sure to set it with 2 springs [1] put on the pin [3] on the bottom of the glue tank assy and on the projection [4] of the glue tank unit.
- After replacing the parts, be sure to conduct the glue apply roller gap adjustment. (Refer to [I.24.4 Glue apply roller gap adjustment](#))

12. After replacing the part, be sure to reset the parts counter.

- No.282 (1250/1250P/1052)
- No.249 (1200/1200P/1051)
- No.308 (C8000/C7000/C7000P/C70hc/C6000)

20.7 Clamp section

20.7.1 Lubrication to the clamp pressing board shaft

(1) Periodic lubrication parts/cycle

- Clamp pressure plate shaft
: Every 750,000 prints*1

*1 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Pull out the clamp unit [1].
2. Apply the plas guard No.2 to 2 positions on the clamp pressing board shaft [2].

a075f2c122ca

20.8 Book stock section

20.8.1 Lubrication to the guide shafts /Rt and /Lt

(1) Periodic lubrication parts/Cycle

- Guide shaft /Rt, /Lt
: Every 750,000 prints*1

*1 1250/1250P/1052/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000

(2) Procedure

1. Apply the plas guard No.2 to 4 positions on 4 positions [1] on the guide shafts /Rt and /Lt.

[1]

a15xt3c067ca

21. PERIODICAL MAINTENANCE PROCEDURE GP-501

21.1 Caution for maintenance procedure

DESCRIPTION ITEMS FOR SAFTY

These symbols are used in this documentation alert you to danger or important information.

	WARNING:	Indicates a potentially hazardous situation which, if not avoided, could result in death or serious Injury.
	WARNING:	Risk of electrical shock. This warning statement indicates situations where there is a risk of death by electric shock.
	CAUTION:	This notice indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.
		Certain components in this product are susceptible to damage from electrostatic discharge. Observe all ESD procedures to avoid component damage.

This section contains cleaning and maintenance procedures.

CAUTION

- **GP-501 uses screws of inch standard. Therefore, do not mix them with other products (metric standard screws). Otherwise, the screw hole is damaged.**
- **Make sure to unplug the power cord of the main body from the power outlet when it is connected to the main body.**

21.2 DIE SET SERVICE

21.2.1 Die Set Service

The Die Set assembly is not serviceable other than inspection and periodic lubrication. The one exception is the felt pad on the Twin Loop Die Set can be replaced. If a Die Set is at its end of life, it will tend to cause mis-feeds due to hanging chips. This is a result of die plate wear, and not pin wear, which cannot be corrected. When this occurs, the Die Set should be replaced with a new one.

21.2.2 Die Set Life Expectancy

The GP-501 Punch Die Sets have a minimum life expectancy of 500K cycles (sheets of paper punched). With periodic lubrication and optimum paper types, life can exceed this number. Variables that affect life expectancy:

- Failure to follow the lubrication schedule or using the incorrect lubricant.
- Variety and types of paper being punched
- Cover stocks being punched
- Length of the average job
- Other environmental conditions

21.2.3 Die Set Components

(1) Die Set Types

The GP-501 Punch uses two types of Die Sets.

Type	Description	Bindery Style
Felt Pad Retainer Assembly	Felt oiler pad on one side (with magnet and retaining plate)	DS-501, 503, 504, 506, 508, 510, 511, 513, 515, 517, 518
Encircled Felt Oiler Pad	Felt oiler pad surrounds the punch pins	DS-502, 505, 507, 509, 512, 514, 516

(2) Serviceable Components

- Shoulder bolt and spring [1]
- Punch pins [2]
- Felt pad [3]
- Floating pressure bar spring (not shown).

(3) Felt Pad Retaining Assembly

The twin loop Die Set has a removable felt pad assembly. The felt pad [1] provides lubrication to the punch pins under normal usage and helps keep them clean. The magnet [2] and retainer [3] keeps the felt pad in place during normal handling and operation.

Figure 3.2 Felt Pad Assembly.

Note

- The felt pad assembly on the Twin Loop Die Set is the only assembly that can be replaced.

(4) Reassembling the Felt Pad Assembly

The felt pad assembly consists of the felt pad [1], magnet [2], and retainer [3].

(a) To assemble the felt pad retaining assembly:

Figure 3.3 Placing Felt Oil Pad on Die Set.

Figure 3.4 Die Set Felt Pad Assembly Order.

1. Lay the die assembly on a table so that the open side of the top bar is facing up.
2. Lay the felt pad [1] along the punch pins so that it spans all pins.
3. If the pad needs oil, apply it along the full length of the pad.
4. Insert the magnet [2] into the retainer [3].

5. Place the magnet and retainer [1] over the pad [2] and lightly press them against the pad and the Die Set base. Make sure the assembly is sitting on the base [3] and that the felt pad is against the punch pins [4].

(5) Floating Pressure Bar Spring Replacement

Some Die Sets use springs to hold the top plate above the pressure bar [1]. Detents in the top plate hold the springs in place [2]. Ensure all springs are in place.

(a) To replace pressure bar springs:

1. Compress the spring and insert between the top bar and pressure bar.
2. Use a flat screwdriver to position the spring so that the detent holds it in place.
3. Compress the top bar to ensure it moves freely and that it returns.

21.2.4 Checking and Replacing the Die Set**(1) Periodically Checked and replaced parts/Spotted Checked and replaced parts/cycle**

- Dieset

: Every 2,000,000 prints ^{*1} (Actual replacement cycle: Every 500,000 punches ^{*2}) ^{*3}

^{*1} The periodical replacement is only for 1200/1200P/1051/C6501/C6501P/C65hc.

^{*2} Actual replacement cycle of 1200/1200P/1051/C6501/C6501P/C65hc/C8000.

^{*3} Replace as needed. Replacement is recommended if hanging chips are usually generated.

(2) Procedure

Set the Die Set on a table and press the top plate straight down at both ends [1] at the same time and look for a smooth operation. The top plate and pins should retract fully when you release.

Reinstall the Die Set into the punch and run several sheets of the customer's paper through the punch. Inspect the holes.

- Holes should be clean and even with no tearing or frayed edges.
- Holes should be punched completely, leaving no chip attached.
- Holes should be straight (no skew) and evenly spaced from the edge of the paper and aligned.

21.2.5 Checking and lubricating the Die Set pins and Die Set shoulder bolts**(1) Periodically Checked and lubricated parts/cycle**

- Die Set pins

: Every 200,000 prints (Actual lubrication cycle: Every 50,000 punches) ^{*1}

: Every 210,000 prints (Actual lubrication cycle: Every 50,000 punches) ^{*2}

- Die Set Shoulder bolts

: Every 800,000 prints (Actual lubrication cycle: Every 200,000 Punches) ^{*1}

: Every 750,000 prints (Actual lubrication cycle: Every 200,000 Punches) ^{*2}

^{*1} 1200/1200P/1051/C6501/C6501P/C65hc

^{*2} C8000

(2) Procedure

Inspect the punch pins for signs of wear or mis-alignment. Periodic lubrication extends the life of the Die Sets. The customer or operator can perform this maintenance between technician inspections.

**(3) To lubricate Die Set pins:**

- Lubricate with 3-IN-ONE oil (high quality machine oil).
- Apply oil lightly along the length of the pad [1], but do not over saturate.
- Do not use spray lubricants because they tend to dry up quickly and leave a sticky residue.

For the felt pad retaining assembly instructions, refer to [F.21.2.3 Die Set Components](#).

(4) To lubricate shoulder bolts:

- Lubricate the shoulder bolts and springs [2] using a brush to apply Magnalube-G Teflon Grease.
- Make sure the grease coats the bolts.

**21.2.6 Hole Alignment inspection**

Inspect the hole alignment on the customer's punched paper. Fold the punched sheet of paper in half [1] and the punched holes should be aligned evenly along the edge and centered between the ends [2]. If the punched holes are not aligned, then the Die Set cradle must be adjusted. For adjustment procedures.

**21.3 CHECK, CLEANING, AND LUBRICATION****21.3.1 CHECK, CLEANING, AND LUBRICATION**

If operating properly, the GP-501 will punch the same types of copy paper and cover materials handled by the copier and run at the same speed. Hole quality will vary between different grades of paper.

The following maintenance should be performed according to the schedule.

(1) Table 3.2 Maintenance Schedule

Description	Qty.	Part Number	Period	Check	Clean	Lubricate	Replace	Materials, Tools Used
Aligner belt (green belt)			12,000K prints		X			a soft cloth and alcohol
Aligner idler roller assembly			12,000K prints		X			a soft cloth and alcohol
Aligner idler rollers			3,000K prints	X	X			a soft cloth and alcohol
Aligner latching mechanisms			3,000K prints	X				-
Back gauge solenoid			3,000K prints	X	X			Blower brush/ vacuum cleaner
Back gauge mechanism	1	A0N9PP59##	4,000K prints				X	-

Base			3,000K prints		X			Vacuum cleaner

Paper path, punch			3,000K prints	X	X			a so ft cloth and alcohol
Punch drive cams			3,000K prints			Grease		Magnalube-G Teflon Grease
Roller energy drive			3,000K prints	X	X			a so ft cloth and alcohol
Timing belts			3,000K prints	X	X			a so ft cloth and alcohol

21.3.2 External Cleaning

The cover may be cleaned with a soft cloth moistened with mild detergent and warm water.

Do not use chemical cleaners or solvents as these may have a harmful effect. Use detergent sparingly to avoid contact with electrical components.

⚠ WARNING:

- **Make sure you disconnect the GP-501 Punch from its power source before cleaning. Failure to observe this warning could result in death or serious injury.**

21.3.3 Internal Cleaning

Occasionally remove the covers and remove paper dust and chips. Paper dust can accumulate throughout the punch including around the motors and other electrical components. Use a vacuum cleaner if possible. A small paintbrush can also be used but extreme care should be used around electrical components.

Non-electrical components may be cleaned with alcohol, an approved cleaner, or a soft cloth moistened with mild detergent and warm water.

Rollers can be cleaned with alcohol.

⚠ WARNING:

- **Make sure you disconnect the GP-501 Punch from its power source before cleaning. Failure to observe this warning could result in death or serious injury.**

21.3.4 Operational Inspection

Make sure the punch operates smoothly and produces the desired holes in the customer's paper.

21.3.5 Internal Inspection

Whenever the cover has been removed for corrective maintenance, visually inspect for defects and problems such as damaged components, loose screws or nuts, abraded wire insulation, loose terminals, etc. Correct any problems before returning the machine to service.

21.3.6 Cleaning the base

(1) Periodically cleaned parts/cycle

- Base
- Every 3,000,000 prints

(2) Procedure

Chips and paper dust falls to the bottom of the punch. Clean with a vacuum cleaner each time the machine is serviced. The customer can also do this between the technician's visits.

(3) Chip Bin

Remove the Chip bin tray and empty. Vacuum out paper chips and dust from the Chip bin [1], especially at the back around the chip tray switch.

**21.3.7 Cleaning the Die guide****(1) Periodically cleaned parts/cycle**

- Die guide
: Every 3,000,000 prints

(2) Procedure

Remove the Die Set and clean the guide [1] with a vacuum cleaner.

**21.3.8 Checking the Door Latch**

The door latch must hold the door closed and ensure that the switch activation tab is depressing the door switch [1]. The switch tab [2] should press the switch button just so that it is close to bottoming.

(1) Periodically checked parts/cycle

- Door latch
: Every 3,000,000 prints.

(2) Procedure

- Ensure latch holds door closed.
- Ensure switch is activated when the door is closed.
- To adjust the door latch. (Refer to [G.21.2.1 Door latch check](#))

21.3.9 Cleaning and Checking the aligner paper path and panels**(1) Periodically cleaned and checked parts/cycle**

- Aligner paper path and panels
: Every 3,000,000 prints.

(2) Procedure

Inspect for worn or damaged parts. Clean with alcohol, an approved cleaner, or a soft cloth moistened with mild detergent and warm water as needed.

(3) To clean the Aligner Panels:

1. Lift the Aligner latches to open panels.
2. Clean surfaces [1].
3. Clean paper alignment channels [2].

21.3.10 Cleaning and Checking the Aligner Idler Roller**(1) Cleaning and Checking the Aligner Idler Roller**

Aligner idler rollers press the paper against the green drive belts and align the paper for punching and exiting. To replace the idler rollers. (Refer to [F.21.3.25 Aligner Idler Roller Replacement](#))

(a) Periodically cleaned and checked parts/cycle

- Aligner Idler Roller
: Every 3,000,000 prints.

(b) Procedure

- Make sure the aligner rollers are clean.
- Ensure that the idler rollers maintain pressure against the green drive belt.
- Inspect for bent or damaged parts.

⚠ WARNING:

- **Disconnect the GP-501 Punch from power and retain the power cord in your possession for your safety. Failure to observe this warning could result in death or serious Injury.**

(c) To inspect the aligner idler rollers:

1. Press the top of each roller's bracket [1]. The roller should move away from the green belt drive and then when released, they spring back into place.

2. Ensure the torsion springs [1] are hooked over the bracket [2].

(d) To clean idler rollers:

1. Clean the idler rollers with a soft cloth and alcohol.
2. Inspect the idler rollers for wear patterns or groves. Surface should be evenly textured and clean.

21.3.11 Cleaning the Aligner (Green) Drive Belt

(1) Periodically cleaned parts/cycle

- Aligner (Green) Drive Belt
- : Every 12,000,000 prints. *1
- *1 1200/1200P/1051/C8000

(2) Procedure

- Ensure the Aligner Drive Belts are clean.
- Inspect for frayed edges and wear.

(3) To clean the Aligner Drive Belts:

1. Clean Green Drive Belt [1] with a plastic scouring pad.
 2. Use the drive knob [2] to turn the belt.
- Figure 3.16 Cleaning Green Drive Belt.

To adjust or replace the Aligner Drive Belt. (Refer to [F.21.3.26 Aligner Drive Belt Replacement](#))

21.3.12 Cleaning and Checking the Back Gauge Solenoid

(1) Periodically cleaned and checked parts/cycle

- Back Gauge Solenoid
- : Every 3,000,000 prints.

(2) Procedure

1. Inspect and ensure the Back Gauge solenoid linkage moves freely. Press linkage down and release [1]. Linkage should return.
2. Clean out the solenoid and surrounding area with a vacuum cleaner and canned air [2]. Make sure the solenoid is clean and dry.

Note

- Do not apply lubricants to the solenoid or linkage.

To remove and repair the back gauge. (Refer to [F.21.3.28 Replacing the back gauge mechanism](#), [F.21.3.29 Back Gauge Removal](#))

21.3.13 Cleaning and Checking the Idler Rollers

(1) Periodically cleaned and checked parts/cycle

- Idler rollers
- : Every 3,000,000 prints.

(2) Procedure

Idler rollers press against the drive rollers and move the paper through the bypass [1] or the punch [2].

Inspect rollers for wear patterns or grooves. The roller surface should be even and have a textured surface. Where practical, remove the roller assembly to clean [3].

Please see the reference page about the maintenance procedure of each roller.

Bypass Idler roller [3].

Punch Idler roller [4]. (Refer to [F.21.3.14 Cleaning and Checking the punch idler rollers](#))

(3) Cleaning and Checking the Bypass Idler Rollers

Idler rollers press against the drive rollers and move the paper through the bypass. Rollers can usually be serviced without removing the bypass panel.

1. Separate the punch from the printer.
2. Disconnect the power.
3. Lift the retaining spring over the end of the idler roller shaft. The illustration shows moving the spring [1] on the bypass plate, which has been removed from the machine for clarity.
4. Pull the released shaft end out of the bushing fork [2], releasing the opposite end of the shaft from the other retaining spring.
5. Clean the idler rollers with a soft cloth and alcohol.
6. Ensure the rollers turn freely on the shaft.
7. To install idler roller assemblies reverse the steps.

**Installation Note:**

- Make sure the flat surface of the bushing aligns in the fork.
- Rollers are non-directional so it does not matter which end goes in each fork.
- After the assembly is in place, gently pull the assembly outward and release to ensure it moves freely in the fork.

(4) Cleaning and Checking the punch idler rollers

Idler rollers press against the drive rollers and move the paper through the GP-501 Punch. Most can be serviced without disassembling punch components. Unplug unit and separate from the printer. (Refer to [G.21.3.2 Separating the Punch From the Printer](#)).

Also remove two side panels as described in [F.21.3.22 Bypass panel Removal](#) and [F.21.3.24 Aligner Panel Removal](#)

(a) Procedure

Inspect rollers for wear patterns or groves [1],[2]. The roller surface should be even and have a textured surface. Replace per the maintenance schedule.

Note

- Pull out the chip bin to access the idler roller [2]

- Use the drive knob [1] to turn the rollers to continue inspection and cleaning.

To remove the Punch Idler rollers:

1. Lift the retaining spring [1] over the end of the idler roller shaft.
2. Pull the released shaft end out of the bushing fork [2], releasing the opposite end of the shaft from the other retaining spring.
3. To install idler roller assemblies reverse the steps.

Installation Note:

- Make sure the flat surface of the bushing aligns in the fork.
- Rollers are non-directional so it does not matter which end goes in each fork.
- After the assembly is in place, gently pull the assembly outward and release to ensure it moves freely in the fork.

21.3.14 Cleaning and Checking the punch idler rollers

Idler rollers press against the drive rollers and move the paper through the GP-501 Punch. Most can be serviced without disassembling punch components. Unplug unit and separate from the printer. (Refer to [G.21.3.2 Separating the Punch From the Printer](#)).

Also remove two side panels as described in [F.21.3.22 Bypass panel Removal](#) and [F.21.3.24 Aligner Panel Removal](#)

(1) Procedure

Inspect rollers for wear patterns or groves [1],[2]. The roller surface should be even and have a textured surface. Replace per the maintenance schedule.

Note

- Pull out the chip bin to access the idler roller [2]

- Use the drive knob [1] to turn the rollers to continue inspection and cleaning.

(2) To remove the Punch Idler rollers:

1. Lift the retaining spring [1] over the end of the idler roller shaft.
2. Pull the released shaft end out of the bushing fork [2], releasing the opposite end of the shaft from the other retaining spring.
3. To install idler roller assemblies reverse the steps.

Installation Note:

- Make sure the flat surface of the bushing aligns in the fork.
- Rollers are non-directional so it does not matter which end goes in each fork.
- After the assembly is in place, gently pull the assembly outward and release to ensure it moves freely in the fork.

21.3.15 Cleaning and Checking the Drive Rollers

Drive rollers are located opposite the idler rollers.

(1) Periodically cleaned and checked parts/cycle

- Drive rollers
: Every 3,000,000 prints

(2) Procedure

Inspect for wear patterns or groves. The roller surface should be even and not glazed.

Some drive rollers are not easily accessible. Those that are [1], should be inspected and cleaned when the idler rollers are removed. Where practical, make sure the rollers are clean. Clean with a soft cloth and alcohol. Refer to also [F.21.3.13 Cleaning and Checking the Idler Rollers](#).

21.3.16 Checking the Aligner Latch

Latches [1] on both sides of the punch hold the Aligner Panels in place, which in turn keeps even pressure on the idler rollers.

(1) Periodically checked parts/cycle

- Aligner Latch
: Every 3,000,000 prints

(2) Procedure

- Inspect the latches for worn or damaged parts.
- Open and close the latches and ensure they lock into place when closed.
- Ensure the nylon wheel [2] turns freely on its bearing and that it aligns with its locking.

21.3.17 Cleaning the Optical Sensors

(1) Periodically checked parts/cycle

- Optical Sensors
- : Every 3,000,000 prints

(2) Procedure

- Inspect and clean Optical Sensors [1] per the maintenance schedule or as needed.

(3) Supplies Needed

Canned air or vacuum cleaner

Use canned air to blow the debris off each sensor. The illustration shows examples of three sensors [1].

21.3.18 Cleaning and Checking the Bypass Paper Path

(1) Periodically cleaned and checked parts/cycle

- Bypass paper path
: Every 3,000,000 prints

(2) Procedure

- Inspect the Bypass panel [1], rollers [2], and entrance guide [3] for wear, damage, and obstructions.
- Inspect the rollers for wear patterns or groves. The surface should be rough and even. Make sure the rollers are clean. Clean rollers with a soft cloth and alcohol. (Refer to [F.21.3.13 Cleaning and Checking the Idler Rollers](#), [F.21.3.15 Cleaning and Checking the Drive Rollers](#))
- Raise the panel and ensure the magnet holds it in open [4]. Inspect the path for obstructions. Clean as needed.
- Close the panel and check that it is flat and that paper will pass under it.
- Ensure the bypass diverter moves freely and returns to the bypass position.

21.3.19 Cleaning and Checking the Punch Paper Path

(1) Periodically cleaned and checked parts/cycle

- Punch Paper path
: Every 3,000,000 prints

(2) Procedure

- Inspect the entire paper path through the punch. Look for wear, damage, and obstructions.
- Inspect the rollers for wear patterns or groves.
- Open the Aligner Panels [1] and U-channel [2] and make sure there are no obstructions.
- Confirm that the latch [3] holds the U-channel tightly in place. Re-shape it if necessary.
- Clean as needed.

21.3.20 Cleaning and Checking the Timing Belt

(1) Periodically cleaned and checked parts/cycle

- Timing Belt
- : Every 3,000,000 prints

(2) Procedure

Inspect all timing belts [1], [2] for wear, missing teeth, frayed edges, and cracks. For replacement, refer to [F.21.3.43 Belt replacement](#).

Check for proper deflection of belts. The belts should be slightly loose with approximately 1/4" (6.35mm) deflection [1]. Belts that are too loose will not drive properly and belts that are too tight can wear out prematurely or damage their driven components. Five belts [2] have tensioners, it is these five belts that should be checked.

21.3.21 Bypass panel

(1) Tools Needed

- Phillips screwdriver or 1/4" nut driver
- Flat bladed screwdriver
- Needle nose pliers

(2) Procedure

Separate the punch from the printer and remove the rear cover. (Refer to [G.21.3.2 Separating the Punch From the Printer](#), [G.21.3.3 Removing the Rear Cover](#))

21.3.22 Bypass panel Removal**(1) To remove the Bypass panel:**

1. If removing the Bypass panel, remove the side panel cover by removing the 4 screws [1].

2. Disconnect the grounding strap by removing the screw [1] on the exit side of the bypass.
3. Unplug the exit side connector [2] at the rear frame.

4. Disconnect the connectors [1] of Enter sensor (S1) and Bypass sensor (S8).

5. From the rear of the punch, remove one of the E-rings [1] from the Bypass shaft.

6. From the side of the punch, slide the shaft towards the end of the shaft [1] without the E-Ring [2] until the other end of the shaft clears the nylon bushing and bracket.
7. Lift the opposite end of the shaft [3] and slide it out of the Bypass panel in the opposite direction of the removed E-Ring [4].

Installation Note

- Make sure the nylon bushing is installed so that it protrudes through the mounting bracket of the rear frame into the Bypass panel [5].

8. Rotate the rear of Bypass panel [1] so that it extends past the entrance side of the punch [2].

9. Remove the Bypass panel.
10. To install the Bypass panel, reverse the steps.

Installation Note

- Position the Bypass panel so that it is outside the shaft mounting brackets. The nylon bushings go through the mounting brackets [1], into the Bypass panel [2].

21.3.23 Aligner panels

The entrance side Aligner panel positions the paper in the Back Gauge for punching. The exit side Aligner panel positions the paper for the finisher. Prior to servicing the Aligner Panels, separate the GP-501 Punch from the printer. (Refer to [G.21.3.2 Separating the Punch From the Printer](#)).

21.3.24 Aligner Panel Removal

Removing the Aligner panels provides access to the paper path and the Aligner Green Drive Belt. The procedure is the same for the entrance and exit Aligner panels except that the exit side has a docking plate which must be removed first.

(1) To remove the Aligner panel:

1. If removing the exit side Aligner panel, remove the side panel cover by removing the 6 screws [1].

Note

- The rest of the steps are the same for both Aligner panels.

2. Release the Aligner latch [1].
3. Remove the E-clips from both ends of the Aligner shaft [2].
4. Remove the shaft nylon bushings [3]

5. Slide the shaft out the front of the punch.
6. Remove aligner latch stop by removing screws [1].

7. Unhook the tension spring from the panel [1].
8. Remove the Aligner panel [2] out the front of the punch.
9. Reverse the steps to install the Aligner panel.

21.3.25 Aligner Idler Roller Replacement**(1) Tools Required**

- Flat head screw driver
- Needle nose pliers

(2) Procedure

1. Pull off E-Clips [1]
2. Remove the pins [2]. During removal of pins hold on to spring with fingers.
3. Completely remove the springs [3] and then slide roller assembly [4] down and then out.

Note

- Aligner rollers must be moved downwards. Hence all the rollers need to be removed.

21.3.26 Aligner Drive Belt Replacement**(1) Procedure**

Before replacing the green drive belts, remove the Aligner panels. (Refer to [F.21.3.24 Aligner Panel Removal](#)) Then follow the procedures below for the entrance side or exit side green drive belt service.

(2) Tools Required

- Phillips screw driver
- Nut drivers, 1/4 and 5/16"
- Hex wrenches, 5/64 and 9/64"
- Snap ring pliers
- E-Ring tool
- Twelve inch metal ruler or similar straight edge

⚠ CAUTION

- Disconnect the GP-501 Punch from power and retain the power cord in your possession for your safety. Failure to observe this caution can result in injury.

Note

- Empty the paper chip bin and replace it. This makes it easier to find small parts that you may drop into the bin.

(3) Paper Entrance Side Green Drive Belt Replacement

1. Disconnect the enter sensor (S1) wire from the side frame [1].

2. Remove the 4 screws that secure the front paper chute [1] to remove the entrance guide [2].

3. To remove the GP2 aligner latch [1], do the following:
 1. Unhook the spring of the GP2 aligner latch on the right end.
 2. Remove only one (the one closest to the frame) of the E-rings of the GP2 aligner latch on the left end (front Door side).
 3. Push the GP2 aligner latch in toward the front door until it clears the rear frame.
 4. Pull the entire GP2 aligner latch, door latch out and set it aside.
4. To remove Entrance Idler Aligner panel [2] assembly. (Refer to F. 21.3.24 Aligner Panel Removal)
5. Remove the fan [7] that prevents access to the flexible cable. To remove it simply pull it off the shaft.
6. Remove the flexible cable using a hex wrench.
7. Remove the 2 screws [3]
8. Loosen screw from the solenoid link.
9. Remove the solenoid assembly [5] and link from the Diverter Shaft[6], leave it hanging.

10. Remove the 2 E-Rings of the Entrance Diverter assembly, slide the Diverter out and set it aside.
11. To remove the Entrance Drive Aligner assembly [7], which is the large sheet metal assembly that actually contains the green drive belt and Aligner.
 1. Remove the 6 Screws that secure the face of this assembly.
 2. Remove the 2 screws that secure this assembly from the side frame.
 3. Disconnect the sensor connector [8]
 4. Pull and walk the entire sheet metal assembly of the Paper Guide Aligner assembly up and outward. You can grab the assembly at the roller cut out with your fingers.

⚠ CAUTION

- As you pull the assembly out, disconnect the sensor harness behind the assembly as soon as you are able to reach it. Failure to observe this notice may damage the wiring.

12. Remove the green drive belt Aligner Roller assembly by removing the 4 screws [1].

⚠ CAUTION

- Leave the Flex Shaft [2] attached.

(4) Green Drive Belt Assembly

1. Stretch the new Belt [3] onto the Aligner Roller assembly, green side out. Rotate the Flex Shaft [2] to confirm that the belt tracks properly.
2. Slide the Aligner into place, loosely attach the 4 Pan Head Screws with the 4 Lock Washers.
 1. Check that the metal surface of the Aligner Roller assembly is flush with the Sheet Metal surface of the Paper Guide. A 12" metal ruler works well to check this adjustment. Slip the ruler under the green drive belt and press it flat against the two surfaces.
 2. Adjust the Aligner and snug the screws when perfectly flush.

Note

- The green drive belt should look like the drawing shown in Figure 3.35.

3. As a double check, hold the entire Paper Guide assembly up so that you can visually inspect the alignment between the sheet metal surface and the metal surface of the Aligner. The green drive belt should appear to be even or parallel, and just floating above the surface of the sheet metal.

3. To install the Paper Guide assembly into the GP-501 Punch:

1. As you slide the Paper Guide assembly into place,
 - Hook up the Sensor Harness to the Sensor on the back.
 - Lift it up slightly to clear the lower Transition Paper Guide.
 - Be sure to clear the Sensor Bracket at the top left.
 - Be sure that the Flex Coupling Shaft is sticking out of the rear of the GP-501 Punch properly.
2. Visually check all around the mounting area of the Paper Guide assembly and that the Sensor Harness is properly connected.
3. Loosely secure it in place with 3 screws on the left and 3 on the right.
4. Loosely install the 2 top screws.
5. Once all 8 mounting screws have been properly started you have good alignment. You may now go back and tighten the screws until they are snug.
4. Install the Flexible Shaft.
5. Install the curved sheet metal Exit Paper Guide (item 7) with Idler Roller 4 Screws. Start all 4 screws, (2 on front and 2 on back) then tighten.
6. Connect the Sensor Wire Harness at the top rear of the Exit Paper Guide.
7. Install the GP2 Shaft back into place by inserting it first into the front, then the back.

8. Close the GP2 Flipper Latch.
Repeat the test of rotating the pulleys to ensure smooth rotation of the Idler Rollers.
9. Attach the GP2 Shaft Spring.
10. Install the front E-Ring to secure GP2.

(5) Entrance Aligner Panel Installation

To install the Idler Aligner panel, refer to [F.21.3.24 Aligner Panel Removal](#). Then insert the punch into the printer and finisher and connect the power cord.

1. Test the GP-501 Punch by doing the following:
 1. Run 10 copies in bypass mode.
 2. Run 1 sheet in punch mode.
 3. Run 10 sheets in punch mode.
 4. Run 100 sheets in punch mode.

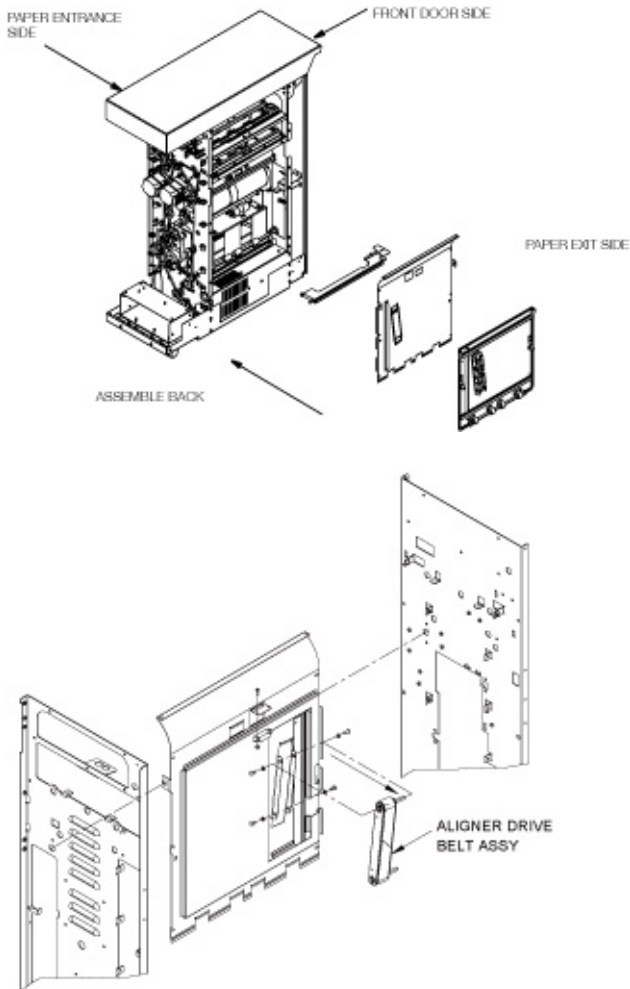

(a) Test the GP-501 Punch by doing the following:

1. Run 10 copies in bypass mode.
2. Run 1 sheet in punch mode.
3. Run 10 sheets in punch mode.
4. Run 100 sheets in punch mode.

(6) Paper Entrance and Exit Side Green Drive Belt Replacement

1. To remove the GP6 Flipper (C), Door Latch:
 1. Remove only one (the one closest to the frame) of the E-Rings of the GP6 Flipper on the right end (front door side).
 2. Push the GP6 Flipper in toward the front door until it clears the rear frame.
 3. Pull the entire GP6 Flipper, door latch out and set it aside.

2. To remove the Rear Aligner, Idler Paper Guide assembly:
 1. Remove 2 E-Rings from the Pivot Shaft.
 2. Slide the Shaft all the way out through the front of the GP-501 Punch.
 3. Remove the 2 nylon bearings.
 4. Remove and set aside the Rear Aligner, Idler Paper Guide assembly.
3. To remove the curved sheet metal Exit Paper Guide assembly:
 1. Remove the 4 screws (2 rear and 2 front) of the curved sheet metal Exit Paper Guide assembly.
 2. Unplug the sensor.
 3. Pull the entire sheet metal Exit Paper Guide assembly out, set aside.
4. To remove the Rear, Drive Side, and Paper Guide Aligner assembly. This is the large sheet metal assembly within the GP-501 Punch that contains the green drive belt Aligner.

CAUTION

- **Walk the Belt off of the Aligner Pulley at the rear.**

1. Remove the 2 screws that hold the block to the frame. The Coupler is loose and the rear panel will come out.
2. Remove the 6 screws that secure the face of this assembly.
3. Remove the 2 screws that secure this assembly from the top.
4. Pull and walk the entire sheet metal assembly of the Paper Guide Aligner up and outward. You can grab the assembly at the roller cut out with your fingers.

CAUTION

- **Handle the helical coupling carefully. It is very delicate.**

Note

- **In order to access these screws, you must first remove the Die Set storage shelf and the cable shield attached to the Die storage shelf at the paper entrance side. Moving the Die Storage shelf aside will enable better access to the 2 screws with a short Phillips screw driver.**

CAUTION

- **As you do this, disconnect the sensor harness behind the assembly as soon as you are able to reach it. Failure to do this can damage the unit.**

5. Remove the green drive belt Aligner Roller assembly by removing the 4 screws (S).

CAUTION

- **Leave the Flex Shaft (FS) attached.**

6. Remove the green drive belt Aligner Roller assembly by removing the 4 screws.

CAUTION

- **Leave the Coupler attached.**

(7) Green Drive Belt Assembly

1. Stretch the new green drive belt onto the Aligner Roller assembly, green side out.
 - Take care when handling the Aligner Roller assembly so as not to damage the Flex Coupling.
 - Rotate the shaft to confirm that the belt tracks properly.
2. Slide the Aligner into place, loosely attach the 4 pan head screws with the 4 lock washers.

Check that the metal surface of the Aligner Roller assembly is flush with the sheet metal surface of the Paper Guide. A 12" metal ruler works well to check this adjustment. Slip the ruler under the green drive belt and press it flat against the two surfaces. Adjust the Aligner and snug the screws when perfectly flush. The green drive belt should look like the drawing shown in Figure 3.41.

To ensure proper assembly, hold the entire Paper Guide assembly up so that you can visually inspect the alignment between the sheet metal surface and the metal surface of the Aligner. The green drive belt should appear to be even and just floating above the surface of the sheet metal.

3. To install the Paper Guide assembly into the GP-501 Punch:
 1. As you slide the Paper Guide assembly into place:
 - Hook up the Sensor Harness to the Sensor on the back.
 - Lift it up slightly to clear the lower Transition Paper Guide.
 - Be sure to clear the sensor bracket at the top left.
 - Be sure that the Flex Coupling shaft is sticking out of the rear of the GP-501 Punch properly.
 2. Visually check all around the mounting area of the Paper Guide assembly and that the sensor harness is properly connected.
 3. Loosely secure it in place with 3 screws on the left and 3 on the right.
 4. Loosely install the 2 top screws.
 5. Once all 8 mounting screws have been properly started go back and tighten the screws until they are snug.

CAUTION

- Do not over tighten the 2 screws on top.

4. Install the 2 screws to secure the bearing block for the pulley arrangement at the rear of the GP-501 Punch. Press the block to the top of the punch before tightening.
5. Install the pulley and belt onto the pulley block. Once properly aligned, check belt and pulley movement. Tighten the set screw.
6. Install the Die Set storage rack with 3 screws front and 3 screws back. Remember to attach the ground strap at the middle screw on the rear (belt side). Start each screw to achieve proper alignment, then go back over each screw and tighten it.
7. Install the Cable Guard on top of the Die Set storage rack (2 Screws).
8. Install the curved sheet metal Exit Paper Guide with Idler Roller 4 screws.
9. Start all 4 screws, (2 on front and 2 on back) then tighten.
10. Connect the sensor wire harness at the top rear of the Exit Paper Guide.
11. To install the Idler Aligner Paper Guide:
 1. Hold it loosely in place.
 2. Press the nylon flange bearings into place, through both pieces of sheet metal, with the flange to the inside.
 3. Slide the shaft through the front of the machine, while holding the nylon flange bearing in place.
 4. Secure with 2 E-rings on the inside of the bearing.
 5. Inspect by pressing in on the bottom area of the sheet metal for:
 - A slight deflection of each Idler Roller as you press.
 - As you press, you can turn the pulleys at the rear of the GP-501 Punch and see the Idler Rollers rotate smoothly.
12. Bend the small metal tab back into place.
13. Install the GP6 shaft back into place by inserting it first into the front, then the back.
14. Close the GP6 Flipper Latch.

Repeat the test of rotating the pulleys to ensure smooth rotation of the Idler Rollers.
15. Attach the GP6 shaft spring.
16. Install the front E-Ring to secure GP6.

(8) Aligner Panel Installation

To install the Idler Aligner panel, refer to [F.21.3.24 Aligner Panel Removal](#). Then insert the punch into the main body and finisher and connect the power cord.

(a) Test the GP-501 Punch by doing the following:

1. Run 10 copies in bypass mode.
2. Run 1 sheet in punch mode.

3. Run 10 sheets in punch mode.
4. Run 100 sheets in punch mode.

21.3.27 Cleaning and checking the energy drive roller

(1) Periodically cleaned and checked parts/ cycle

- Energy drive rollers
- : 3,000,000 prints

(2) Procedure

Reference Figure 3.44 Energy Roller as you perform this procedure.

1. Without disconnecting either retaining spring [1], roll one of them gently to one side to release the Energy Drive Roller shaft from its mounting bracket.
2. Lift the shaft [2] from the mounting bracket.
3. Using a clean cloth and alcohol, clean the surfaces of the rollers [3] to remove any paper dust or toner that may have accumulated over time.
4. Reverse steps 2 & 1 above to replace the shaft into the holder.
5. Ensure the flats of the bearings are seated properly in the mounting brackets.
6. Ensure the springs are straight on the bearing to apply sufficient force for the rollers to turn when you rotate the knob at the front of the machine.

21.3.28 Replacing the back gauge mechanism

The Back Gauge assembly pauses the paper just as the edge has entered the die set. Working properly, the sheet will pause only long enough for the holes to be punched correctly. The Back Gauge assembly also controls the paper chad falling into the chad bin, significantly reducing the amount of chad that could flow through the paper path. Some chad falls outside the chad bin and should be cleaned up with a vacuum cleaner during each servicing.

⚠ WARNING

- **Disconnect the GP-501 Punch from its power source before removing the Back Gauge assembly.**
Failure to observe this warning can result in severe injury or death and damage the punch.

(1) Periodically replaced parts/Spotted replaced parts/cycle

- Back gauge mechanism
- : Every 16,000,000 prints*¹ (Actual replacement cycle: Every 4,000,000 punches*²)

*¹ The periodical replacement is only for 1200/1200P/1051.

*² Actual replacement cycle of 1200/1200P/1051/C8000.

(2) Procedure

Remove Back Gauge assembly to clean and service the solenoid or to replace the Back Gauge. Also allows the removal of the Punch Module.

To repair or replace the Back Gauge, separate the GP-501 Punch from the printer and finisher and then remove the rear cover. (Refer to [G. 21.3.1 Preparing the GP-501 punch for service](#))

(3) Tools Required

Phillips screw driver or 1/4" nut driver

Note

- Empty the paper chip bin and replace it. This makes it easier to find small parts that you may drop into the bin.

21.3.29 Back Gauge Removal**(1) To remove the Back Gauge assembly:**

1. Turn the Punch Cycle knob [1] so that the punch drive indicator [2] lines up the position indicator [3].

2. Remove the Die Set and Chip Bin.
3. Remove the two Die Set Chip Brush bracket screws [1].

4. On the rear of the punch, unplug the drive punch flag sensor connector [1].
5. Remove the 2 Die Set Adjustment Bracket screws [2] and pull the bracket aside [3].

6. Remove the 2 Back Gauge rear mounting screws [1].

7. Disconnect the Back Gauge connector from the Punch Controller PCB [1].

8. Cut wire harness ties as needed to free the solenoid wires.
9. Cut the 2 harness ties on the entrance side of the punch.

10. Remove the grommet from the frame [1].

Note

- If you are not replacing the Back Gauge or are removing it for access to the Punch Module, it is not necessary to pull the wire through the hole in the frame. The Back Gauge can be set aside.

11. Feed the connector through the hole in the frame and the grommet separately [2].

12. Remove one top screw [1] of chip tray full sensor bracket [2] and pivot the bracket down.

13. Gently slide the Back Gauge assembly to the rear of the punch [1] so that it extends through the slot [2] and clears the wiring harness [3].

CAUTION

- Do not damage the wires in the wiring harness. Failure to observe this precaution may damage the wiring.

14. Make sure the left end of the Back Gauge clears the opening on the front of the punch [1] and pull it out [2] while sliding it to towards the front.

15. Remove the Back Gauge and rail as an assembly.
16. To install the Back Gauge, reverse these steps.
17. After replacing the Back gauge mechanism, conduct the following item.
When connecting to C8000/C7000/C7000P/C70hc/C6000
Counter reset of the parts counter number 317
When connecting to 1250/1250P/1052
Counter reset of the parts counter number 293
When connecting to 951
Counter reset of the parts counter number 175

(2) Testing

(a) To test the Back Gauge:

1. Install a Die Set.
2. Rotate the punch drive knob to ensure the drive and cams turn easily.
3. Test for proper hole alignment to the paper edge by doing the following.
 - a. Run 1 page at a time.
 - b. Run 2 pages at a time.
 - c. Run 5 pages at a time.
 - d. Run 10 pages at a time.
 - e. Run 50 pages at a time.

21.3.30 Solenoid Spring Replacement

(1) Procedure

Removal of spring [1] and [2] -

Grasp the loop of the spring with needle nose pliers and then pull them off the shaft.

Removal of spring [3] -

Grasp the loop of the spring with needle nose pliers and then pull them off the sheet metal part.

21.3.31 Back Gauge Paddle

(1) Procedure

First remove Back gauge assembly as described in "[F.21.3.29 Back Gauge Removal](#)".

Deep or angled deep punches may be caused by a broken weld on the Paddle shaft [1]. Inspect the Paddle and press down on it while holding the linkage to keep the linkage from moving. If the paddle [2] moves, replace the Back Gauge assembly.

21.3.32 Back Gauge Assembly Adjustment

The Back Gauge can be adjusted up and down for optimum operation for specific Die Sets.

The Back Gauge should be at its highest position for VeloBind or PB Die Sets. If it is not, the Back Gauge Paddle may not completely close the paper path gap. This can result in paper (especially with excessive curl) slipping through the gap created by the Paddle and the top plate of the Die Set. This causes a deep punch.

Initially, move the assembly to its highest position and then adjust accordingly after testing each Die Set.

Ensure it is easy to insert and remove three hole Die Sets. If the Die Set is too tight, evenly lower the Back Gauge slightly to achieve the tightness required, while still retaining the PB and VeloBind functionality mentioned above.

(1) To adjust the Back Gauge:

1. Loosen the 3 phillips head screws [1].
2. Move the entire assembly [2] upward or downward as needed while keeping it even.
3. While holding the assembly up, tighten the 3 screws.

(2) Testing

(a) To test the Back Gauge adjustment:

1. Run a few sheets of paper and check for skew with each Die Set.
2. Adjust the Back Gauge as needed and re-test.
3. Run 200 to 500 sheets of paper and check for mis-feeding, deep punching, and skew.

21.3.33 Punch module

(1) Tools Required

- Phillips screw driver or 1/4" nut driver
- Hex wrench, 5/64"

NOTE

- Empty the paper chip bin and replace it. This makes it easier to find small parts that you may drop into the bin.

(2) Procedure

Remove the module to lubricate the cams, or to service or replace the following components.

- Punch motor
- Drive motor belt
- Punch module brake
- Cams
- Flexible drive coupling
- Punch Module drive rollers

The clutch can be replaced without removing the module. (Refer to [F.21.3.36 Punch Clutch Replacement](#)).

⚠ WARNING

- Disconnect the GP-501 Punch from its power source before removing the Back Gauge assembly. Failure to observe this warning can result in severe injury or death and damage the punch.

21.3.34 Punch Module Removal

The Back Gauge assembly must be removed before removing the Punch Module. (Refer to [F.21.3.29 Back Gauge Removal](#)).

(1) To remove the Punch Module:

1. Remove the Back Gauge assembly.
2. Use a 5/64" hex wrench to remove the Punch Cycle knob [1].

3. Remove the 4 Punch Module retaining screws [1] from the front panel.

4. Release the cable ties on the left wiring harness [1] to free the Punch Module wiring. Remove the connector from flag sensor [2]. Remove harness from brake and clutch as per image below.

5. Remove the belts in the following order.
 1. Remove the bottom left and right vertical belts [1] by walking the belts over the pulleys.
 2. Remove the 4 power supply screws [5].
 3. Loosen the belt idler rollers [2] and remove the upper vertical belt [3].
 4. Remove the bottom triangular belt [4] after loosening the respective tensioner.

6. Remove the two rear Punch Module screws [1].

7. Cut wire harness ties as needed to release the punch wiring.
8. Unplug the punch connector [1] from the control board.

9. Carefully slide the Punch Module out the back of the punch. Ensure that the wiring harness does not get caught or prevent removal of the module.

21.3.35 Lubricating to the Punch Drive Cams

(1) Periodically lubricated parts/cycle

- Punch drive cams
: Every 12,000,000 prints (Actual lubrication cycle: Every 3,000,000 punches)*1

*1 1200/1200P/1051/C8000

(2) Procedure

Back gauge and rail needs to be removed for accessing punch module cams. refer to [F.21.3.29 Back Gauge Removal](#) for removing back gauge. Use brush for reach to cams for further cleaning operation.

Installation Note

- Make sure the wires on the rear of the punch are not obstructing the Die Set or Chip Bin.

21.3.36 Punch Clutch Replacement

(1) Procedure

Replace if Punch clutch is malfunctioning.

Note

- The Punch clutch can be removed without removing the Punch Module.

(2) Tools Required

- Phillips screwdriver or 1/4" nut driver
- Hex wrench, 5/64"

(3) To remove the clutch:

1. Unplug the punch flag sensor (S9) connector [1].

2. Slide the fan [1] off the shaft.

3. Remove the lower drive belt [1].

4. Loosen the 2 pulley socket head set screws [1].
5. Remove the pulley and its shaft key [2].

6. Remove the 2 clutch bracket screws [1].

Installation Note

- When installing the clutch bracket, ensure that the fork of the clutch engages the tab on the bracket [2].

7. Loosen the 2 clutch socket head set screws [1], slide the Punch clutch [2] off the shaft, and remove the shaft key [3].

Installation Note

- When installing the Punch clutch, be sure to install the shaft key. Press the Punch clutch against the drive gear plate. While pressing the clutch against the plate, tighten the 2 set screws. The assembly does not require a gap between the Punch clutch and clutch plate.

8. Cut wire ties as needed and unplug the clutch connector [1] from the Punch Controller PCB.

9. Slide the back portion of the clutch [1] off the shaft.
The motor drive belt [2] can be removed at the same time.
10. To install the clutch, reverse these steps.

21.3.37 Punch Module Brake Replacement and Adjustment

(1) Procedure

To replace the Punch module brake, first remove the clutch and related drives. (Refer to [F.21.3.36 Punch Clutch Replacement](#)). The Punch module brake must be adjusted while on drive shaft. To adjust the Punch module brake. (Refer to [F.21.3.39 Punch Module Brake Adjustment](#))

(2) Tools Needed

- Feeler gauge, 0.0001" (0.00254 mm)
- Hex wrenches, 0.05" and 3/32"
- Flat blade screwdriver
- Pliers

21.3.38 Punch Module Brake Replacement**(1) To replace the Punch module brake**

1. Remove the 4 socket head set screws [1].
2. Loosen the 2 set screws [2] until the brake pad [3] slides freely on the shaft.

Installation Note

- When installing the Punch module brake, ensure that the 2 set screws engage the flats on the shaft. To adjust the Punch module brake. (Refer to [F.21.3.39 Punch Module Brake Adjustment](#))

3. Remove the E-Ring at the opposite end of the shaft [1].
4. Slide the shaft [2] out of the bearing bracket, away from the clutch end.
5. Slide the Punch module brake assembly off the shaft.
6. To install the Punch module brake assembly, reverse these steps.

21.3.39 Punch Module Brake Adjustment**(1) Procedure**

The Punch module brake can be adjusted without removing the Punch module brake from the shaft. The gap between the brake and the pad is 0.0001" (0.00254 mm) .

(2) To adjust the Punch module brake

0.0001" (0.00254 mm)

1. Loosen the 2 set screws [1] until the brake pad slides freely on the shaft.

2. Use a 0.0001" (0.00254 mm) feeler gauge to set the gap between the brake and the brake pad.
3. Tighten the 2 set screws and check the gap.

21.3.40 Punch Module Motor Replacement**(1) Procedure**

Replace motor when it malfunctions.

(2) To replace the Punch Module motor:

1. Cut any wire ties as necessary to release the motor wires.
2. Unplug motor wire connections from the capacitor [1].

3. Remove the metal spring clip [1] from the fan and slide the fan [2] off the shaft.

Installation Note

- When installing the fan, be sure to align the flat of the fan hub with the flat on the shaft. Also, make sure the hub and spring clip are facing away from the motor.

4. Loosen the 2 socket head set screws[1] on the pulley and slide the pulley and belt off the shaft.
5. Remove the motor mounting 4 nuts [2].
6. To install the motor, reverse these steps.

21.3.41 Punch Module Motor Drive Belt Replacement**(1) Procedure**

Replace the belt when it is frayed, missing teeth, or worn out.

(2) To replace the Punch Module drive belts:

1. With the fan removed from the shaft, work the belt [1] off the clutch gear [2].
2. Install a new belt by looping it over the motor pulley and then work it onto the clutch gear.
The belt requires no adjustment. It should have slight deflection when pressed.

21.3.42 Punch Module Drive Roller Replacement**(1) Procedure**

Inspect for wear patterns or grooves. The roller surface should be even and not glazed. Clean with a soft cloth and alcohol.

(2) Tools Required

- Phillips screw driver or 1/4" nut driver
- Flat bladed screwdriver

- Needle nose pliers

With the Punch Module out of the machine, the punch entrance side [1] and exit [2] drive rollers can be cleaned or replaced.

(3) To clean the punch entrance drive rollers:

1. Remove the idler roller assembly [1].
2. Rotate and clean the drive rollers [2].

(4) To replace the punch entrance drive rollers:

1. Unplug the sensor [1].
2. Remove the 2 screws at the ends of the idler roller assembly [2].
3. Remove the 2 screws at the ends of the drive roller assembly [3].

4. Remove the E-Ring at the end of the drive roller shaft [1].
5. Slide the drive roller shaft and bracket towards the opposite end of the Punch Module so that the end of the shaft clears the bearing at the end where you removed the E- Ring [1].
6. Lift the drive roller and bracket out of the Punch Module.

(5) To clean the punch exit drive rollers:

1. Move one retaining spring [1] to the side and then remove the idler roller assembly [2].
2. Rotate and clean the drive rollers [2].

(6) To replace the punch exit drive rollers:

1. Move one retaining spring [1] to the side and then remove the idler roller assembly [2].
2. Remove the 2 screws at each end of the idler roller assembly [3].
3. Remove the E-Ring [4] at the end of the drive roller shaft.
4. Slide the drive roller shaft and bracket towards the opposite end of the Punch Module so that the end of the shaft clears the bearing at the end where you removed the E-Ring [4].
5. Lift the drive roller and bracket out of the Punch Module [5].
6. Remove the sensor [6].
7. To install the drive roller, reverse these steps.

21.3.43 Belt replacement**(1) To replace belts:**

[1]->[2]->[3]->[4]->[5]

1. Loosen the screws of the 3 belt idlers [1].

Installation Note

- When setting the belt tension, adjust the belt idlers so that the belt has approximately 1/4" (6.35mm) of deflection.

2. Remove the belts in order as follows

3. To install and adjust the tension of the belts, reverse these steps.

21.3.44 Tools

Tools (needs to be reviewed by Engineering for current design accuracy)
Tools recommended for service of the GP-501 Punch:

(1) Standard Measure Tools (English as opposed to metric)

- Open end ignition wrench - 1/4" (required only for chad kit installation)
- Phillips screwdriver or 1/4" and 5/16" nut drivers
- Hex wrenches, 3/32", 5/64", and 9/64"

(2) Other Recommended Tools and Supplies

- Needle nose pliers
- Wire cutters

- Screw driver, flat head, small
- Supply of wire tie wraps

22. PERIODICAL MAINTENANCE PROCEDURE GP-502

The descriptions of the periodical maintenance procedure GP-502 are mentioned in the GP-502 service manual.

G DISASSEMBLING/REASSEMBLING

1. ITEMS NOT ALLOWED TO BE DISASSEMBLED

1.1 Screw-lock applied screw

Note

- The screw-lock is applied as a prevention of screw looseness.
- The screw-lock is applied to the screws which have a risk of loosening with the oscillation and load during using and shipment.
- When loosening or removing the screw which has been applied the screw-lock, be sure to apply the screw-lock again after tightening the screw.

1.2 Prohibition of adjusting the volume of boards

Note

- Do not change the volume of the boards whose adjustment procedures are not indicated.

1.3 Precaution on removing the boards

⚠ CAUTION

- When removing the boards, check the safety and important warning items and then remove the boards following the removal procedure.
- The removal procedures from the connector and the board support are omitted.
- Be sure to use the body earth when touching the element on the board by necessity.
- For the prevention of electric shock, do not touch the DC power supply /1 of the main body for 515 minutes after turning OFF the power switch.
There is a possibility of electrical shock caused by charging voltage.
- For the prevention of electric shock, do not touch the DC power supply /2 of the main body for 30 minutes after turning OFF the power switch.
There is a possibility of electrical shock caused by charging voltage.
- For the prevention of electric shock, do not touch the DC power supply of the RU for 50 minutes after turning OFF the power switch.
There is a possibility of electrical shock caused by charging voltage.

1.4 Scanner section

1.4.1 Read position adjusting plates /Fr and /Rr

(1) Positions from which removing is prohibited

- The skew adjustment by the DF skew adjustment screw [1] is not allowed as a rule.

1050fs2073c

[1]	Screws not allowed to be removed	[2]	Read position adjusting plate /Fr
[3]	Read position adjusting plate /Rr	-	

(2) Reason of prohibition

The read position adjusting plates /Fr and /Rr hold in place the slit glass that becomes the read position while in the DF scan. The displacement of the slit glass damages the image read by the DF to be distorted. Accordingly, changing the position of installation is not allowed.

1.4.2 Mirror unit/exposure unit

(1) Position not allowed to be adjusted

- Installation positions of the mirror unit and the exposure unit

[1]	Mirror unit	[2]	Exposure unit
-----	-------------	-----	---------------

(2) Reason of prohibition

The distance between the mirror unit and the exposure unit affects the magnifications of the original to be read in the sub scan direction. Therefore, adjusting the installation positions of the mirror unit and the exposure unit arbitrarily is not allowed. However, when the exposure unit and the scanner wire have been removed, these parts must be reinstalled using the optics unit positioning jig.

1.5 CCD unit

1.5.1 Positions from which removing is prohibited

- 9 screws used to assemble the CCD unit
- 4 attaching screws of the lens reference plate assembly

[1]	Screws not allowed to be removed	[2]	Screws not allowed to be removed
[3]	CCD unit	[4]	Read position adjusting plate /Rr
[5]	Attaching screw of the CCD unit (allowed to be removed when replacing the CCD unit)	-	

1.5.2 Reason of prohibition

The accuracy of the CCD unit is guaranteed as a unit, and if disassembled, its accuracy is not guaranteed. Accordingly, removing screws that lead up to the disassembly of the CCD unit is not allowed.

The lens reference plate assembly acts as the basis for the installation position of the CCD unit. Removing this assembly causes the displacement of the optical axis of the CCD unit. So, be sure not to remove the attaching screws of the lens reference plate assembly.

1.6 Developing unit

1.6.1 Positions from which removing is prohibited

- 2 fixing screws of the developer regulation blade
- One fixing screw of the magnet angle adjusting knob

a0g6t3c272ca

[1]	Screws not allowed to be removed	[2]	Screws not allowed to be removed
[3]	Magnet angle adjusting knob	[4]	Developing roller
[5]	Developer regulation blade	-	

1.6.2 Reason of prohibition

The developer regulation blade and the magnet angle adjusting knob both decide the heights of the developer in the developing roller. They have been adjusted to an appropriate value in advance. Accordingly, removing these fixing screws is not allowed.

1.7 DUPLEX SECTION

1.7.1 Positions from which removing is prohibited

- 1 fixing screw of the belt cleaning unit mounting bracket /Fr
- 1 fixing screw of the belt cleaning unit mounting bracket /Rr

a0g6t3c273ca

[1]	Screws not allowed to be removed	[2]	Belt cleaning unit mounting bracket /Rr
[3]	Belt cleaning unit mounting bracket /Fr	[4]	Screws not allowed to be removed
[5]	Belt cleaning unit	-	

1.7.2 Reason of prohibition

The belt cleaning unit holds in place the transfer belt unit. The positional relation between the transfer belt unit and the drum has been adjusted to an appropriate place in advance by the installation position of the belt cleaning unit mounting bracket /Fr and /Rr. Accordingly, removing the fixing screws of these mounting brackets is not allowed.

1.8 Photo conductor section

1.8.1 Positions from which removing is prohibited

- 1 fixing screw of the LPH mounting bracket /Fr
- 1 fixing screw of the LPH mounting bracket /Rr

a0g6t3c384ca

[1]	Screws not allowed to be removed	[2]	LPH mounting bracket /Rr
[3]	LPH mounting bracket /Fr	[4]	Screws not allowed to be removed

1.8.2 Reason of prohibition

The positions of the LPH and the drum are adjusted beforehand according to the installation position of the LPH mounting brackets /Fr and /Rr. Accordingly, removing the fixing screws of these mounting brackets is not allowed.

2. bizhub PRESS 1250/1250P/1052/PRO 951

2.1 List of disassembling and assembling parts

Note

- This list shows the explanation of the disassembly and reassembly of the parts which are considered necessary to replace (other than periodically replaced parts). However, these parts except for the covers do not require to be disassembled while in normal service operations.
- For the replacement procedure of the periodically replaced parts, refer to "[F.5. Periodical maintenance procedure bizhub PRO 1200/1200P/1051.](#)"

No.	Section	Parts name

2.2 Disassembling and assembling procedures

2.2.1 Precautions on disassembling and assembling

⚠ Note:

- When disassembling/reassembling the parts, be sure to unplug the power plug of the main body from the power outlet.

2.2.2 Rear cover

(1) Procedure

1. Loosen 3 screws [1] and remove the exhaust cover [2].

2. Remove 9 screws [1] and then remove the rear cover [2].
3. Reinstall the preceding parts following the removal steps in reverse.

2.2.3 Right cover

(1) Procedure

1. Remove 6 screws [1] and then remove the right cover [2].
2. Reinstall the preceding parts following the removal steps in reverse.

2.2.4 Left cover

(1) Procedure

1. Remove 6 screws [1] and then remove the left cover [2].
2. Reinstall the preceding parts following the removal steps in reverse.

2.2.5 Front door /Rt**(1) Procedure**

1. Open the front door /Rt [1].
2. Loosen 2 screws [2] and bring down the shaft [3].
3. Remove the front door /Rt [1].
4. Reinstall the preceding parts following the removal steps in reverse.

2.2.6 Front door /Lt**(1) Procedure**

1. Open the front door /Lt [1].
2. Loosen 2 screws [2], bring down the shaft [3] and remove the front door /Lt [1].

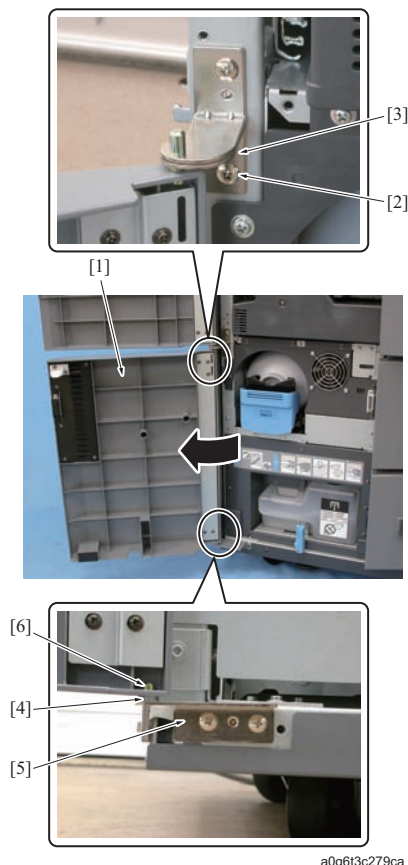

Note

- When reinstalling the front door /Lt [1], be sure to insert the projection [6] of the hinge [5] into the hole [4] provided in the lower section of the front door /Lt.

3. Reinstall the preceding parts following the removal steps in reverse.

2.2.7 Toner supply door

(1) Procedure

1. Open the toner supply door [1].
2. Remove the screw [2] and then remove the hinge [3] together with the toner supply door [1].

Note

- When reinstalling the toner supply door [1], be sure to insert the projection [6] of the hinge [5] into the hole [4] provided in the lower section of the toner supply door.

3. Reinstall the preceding parts following the removal steps in reverse.

2.2.8 Upper cover /Rr1

Note

- The same removal and reinstallation procedure is applicable when the DF-615/616 is provided.

(1) Procedure

1. Remove 3 screws [1] and then remove the upper cover /Rr1 [2].
2. Reinstall the preceding parts following the removal steps in reverse.

2.2.9 Upper cover /Rr2

Note

- The same removal and reinstallation procedure is applicable when the DF-615/616 is provided.

(1) Procedure

a0g6t3c282ca

1. Remove 2 screw caps [1].
2. Remove 2 screws [2] and then remove the upper cover /Rr2 [3].
3. Reinstall the preceding parts following the removal steps in reverse.

2.2.10 Upper cover /Rt**Note**

- The same removal and reinstallation procedure is applicable when the DF-615/616 is provided.

(1) Procedure

a0g6t3c283ca

1. Remove 3 screw caps [1].
2. Remove 5 screws [2] and then remove the upper cover /Rt [3].
3. Reinstall the preceding parts following the removal steps in reverse.

2.2.11 Original glass**Note**

- The same removal and reinstallation procedure is applicable when the DF-615/616 is provided.
- When reinstalling the original glass, be sure that the shading correction plate (white) is on the upper side of the glass.

(1) Procedure

1. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
2. Remove 2 screws [1] and then remove the original stopper plate / Lt [2].
3. Remove 3 screws [3] and then remove the original stopper plate / Rr [4].
4. Remove 2 screws [5] and then remove the original stopper plate / Rt [6].
5. Remove the original glass [7].
6. Reinstall the preceding parts following the removal steps in reverse.

2.2.12 Upper cover / Lt**Note**

- The same removal and reinstallation procedure is applicable when the DF-615/616 is provided.

(1) Procedure

1. Remove 2 screws [1] and then remove the original stopper plate / Lt [2].
2. Remove 2 screws [3] and then remove the upper cover /Lt [4].
3. Reinstall the preceding parts following the removal steps in reverse.

2.2.13 Upper cover /Fr**Note**

- The same removal and reinstallation procedure is applicable when the DF-615/616 is provided.

(1) Procedure

1. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
2. Remove the original glass. (Refer to [G.2.2.11 Original glass](#))
3. Remove the upper cover /Lt. (Refer to [G.2.2.12 Upper cover / Lt](#))
4. Remove the original glass guide /Fr [1].

5. Remove the front door /Rt. (Refer to [G.2.2.5 Front door /Rt](#))
6. Remove the front door /Lt. (Refer to [G.2.2.6 Front door /Lt](#))
7. Remove 4 screws [2] provided on the bottom of the upper cover / Fr [1].

a0g6t3c287ca

8. Remove 4 screws [1] and then remove the upper cover /Fr [2].
9. Reinstall the preceding parts following the removal steps in reverse.

2.2.14 CCD unit

(1) Procedure

1050fs2074c

1. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
2. Remove the original glass. (Refer to [G.2.2.11 Original glass](#))
3. Remove 10 screws [1] and then remove the lens light blocking cover [2].

a0g6t3c289ca

4. Remove 2 screws [1] and then remove the cable cover [2].

1050fs2076c

5. Remove the ribbon cable [2] from the CCD board (CCDB) [1].

1050fs2077c

Note

- When removing the ribbon cable [1], bring down the lock lever [3] of the connector [2] in the direction as shown in the drawing to release the lock and pullout the ribbon cable.

**Note**

- When reinstalling the ribbon cable [1], make sure that the lock lever [2] is released. Then insert the ribbon cable fully into the connector [3] while taking care that the conductor side of the ribbon cable comes to the under side of the lock lever.

**Note**

- After that, return the lock lever [1] to its original position and lock the ribbon cable [2].

- Remove the screw [1], and remove the ground terminal [2].
- Remove 2 screws [3] and then remove the CCD unit [4].
- Reinstall the preceding parts following the removal steps in reverse.
- After reinstalling the CCD unit, conduct the following items in order.
 - Printer FD-Mag. Adj. (Side1)
(Refer to [I.5.3.7 Printer FD-Mag. Adj. \(Side1\) \(Magnification Adjustment\)](#))
 - Scanner paper feed direction magnification adjustment
(Refer to [I.5.3.11 Scanner FD-Mag. Adj. \(Magnification Adjustment\)](#))
 - Scanner paper feed direction magnification adjustment
(Refer to [I.5.3.12 ADF FD-Mag. Adjustment \(Magnification Adjustment\)](#))
 - Scanner restart timing adjustment
(Refer to [I.5.3.19 Scanner Restart Timing Adj. \(Timing Adjustment\)](#))
 - Distortion adjustment original glass (main scan direction)
(Refer to [I.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment original glass (sub scan direction)
(Refer to [I.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment ADF (main scan direction)
(Refer to [I.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment ADF (sub scan direction)
(Refer to [I.5.3.35 Distortion Adjustment](#))

2.2.15 Exposure lamp**(1) Procedure**

- Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
- Remove the original glass. (Refer to [G.2.2.11 Original glass](#))
- Remove the upper cover /Lt. (Refer to [G.2.2.12 Upper cover / Lt](#))
- Remove the original glass guide /Fr [1].
- Remove the original glass guide /Rr [2].

6. Move the exposure unit [1] to the notch position [2] of the main body frame.
7. Remove the screw [3] and then remove the cable clamp [4].
8. Disconnect the connector [5].
9. Remove the screws [6], 1 each, and then remove the lamp presser plates /Fr [7] and /Rr [8].
10. Remove 2 screws [9] and then remove the exposure lamp [10].
11. Reinstall the preceding parts following the removal steps in reverse.
12. After reinstalling the exposure lamp, conduct the following steps.
 - Scanner restart timing adjustment
(Refer to [I.5.3.19 Scanner Restart Timing Adj. \(Timing Adjustment\)](#))
 - Distortion adjustment original glass (main scan direction)
(Refer to [I.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment original glass (sub scan direction)
(Refer to [I.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment ADF (main scan direction)
(Refer to [I.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment ADF (sub scan direction)
(Refer to [I.5.3.35 Distortion Adjustment](#))

2.2.16 Exposure unit

(1) Procedure for removal

1. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
2. Remove the original glass. (Refer to [G.2.2.11 Original glass](#))
3. Remove the upper cover /Lt. (Refer to [G.2.2.12 Upper cover / Lt](#))
4. Remove the upper cover /Fr. (Refer to [G.2.2.13 Upper cover /Fr](#))
5. Remove 3 screws [1] and remove the upper cover /Lt [2].

1050fs2083c

6. Move the exposure unit [1] to the notch position [2] of the main body frame.
7. Remove 2 screws [3] and then remove the cord presser member [4].
8. Remove the screw [5] and then remove the ground terminal [6].
9. Disconnect the connector [7].
10. Remove 4 screws [8] and then remove the exposure unit [1].

(2) Procedure for reinstallation

1050fs2084c

1. Move the V-mirror unit [1] toward the V-mirror positioning hole [2].
2. Insert the optics unit positioning jig [3] into the V-mirror positioning hole [2], and fix the V-mirror unit [1].

Note

- Be sure to insert the optics unit positioning jig [3] from the front side and pass it through the V-mirror unit [1].
- Be care full not to confuse the V-mirror positioning hole [2] with the unused hole [4].

3. Insert the optics unit positioning jig [6] into the exposure unit positioning hole [5].
4. Press the exposure unit [7] against the optics unit positioning jig [6].
5. Reinstall the exposure unit with 4 screws.
6. Remove 2 optics unit positioning jigs.
7. Be sure that the reinstallation of the following parts follows the removal steps in reverse.
8. After reinstalling the exposure unit, conduct the following items in order.
 - Scanner restart timing adjustment
(Refer to [1.5.3.19 Scanner Restart Timing Adj. \(Timing Adjustment\)](#))
 - Distortion adjustment original glass (main scan direction)
(Refer to [1.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment original glass (sub scan direction)
(Refer to [1.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment ADF (main scan direction)
(Refer to [1.5.3.35 Distortion Adjustment](#))
 - Distortion adjustment ADF (sub scan direction)
(Refer to [1.5.3.35 Distortion Adjustment](#))

2.2.17 Scanner wire

Note

- Be sure to wind the wire closely without overlapping each other.
- When re-stretching or replacing the scanner wire, be sure to use the optics unit positioning jig.

- When re-stretching or replacing the scanner wire, be sure to conduct the image adjustment in the service mode. (Refer to [ADJUSTMENT/SETTING](#))

(1) Procedure for removal

1. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
2. Remove the original glass. (Refer to [G.2.2.11 Original glass](#))
3. Remove the upper cover /Lt. (Refer to [G.2.2.12 Upper cover / Lt](#))
4. Remove the upper cover /Fr. (Refer to [G.2.2.13 Upper cover /Fr](#))
5. Remove the exposure unit. (Refer to [G.2.2.16 Exposure unit](#))
6. Loosen each screw [1], release 2 spring fixing plates [2], and remove the spring [3].
7. Remove the wire terminal [4] from the spring fixing plate [2], and then remove the scanner wires /Fr [9] and /Rr [10] from the pulley /3 [5], the pulley [7] of the V-mirror unit [6] and the pulley /2 [8] in order.
8. Remove the wire restriction sheet [13] from the wire stoppers /Fr [11] and /Rr [12].
9. Remove the metal ball [14] from the wire stoppers /Fr [11] and /Rr [12], and then remove each scanner wire from the pulley [7] of the V-mirror unit [6] and the pulley /1 [15] in order.
10. Remove the scanner wires Fr [9] and /Rr [10] from the drive pulley [16].

(2) Procedure for reinstallation

1. Move the V-mirror unit [1] toward the V-mirror positioning hole [2].
2. Insert the optics unit positioning jig [3] into the V-mirror positioning hole [2], and fix the V-mirror unit [1].

Note

- Be sure to insert the optics unit positioning jig [3] from the front side and pass it through the V-mirror unit [1].
- Be care full not to confuse the V-mirror positioning hole [2] with the unused hole [4].

1050fs2226c

3. Drop the metal ball [3] in between the scanner wire /Fr [1] and /Rr [2] into the installation hole of the drive pulley [4]. With this hole as a starting point, wind the wire 4 turns [5] outwards and 5 turns [6] inwards.

Note

- Be sure to wind the scanner wire with the metal ball [7] at the end outwards and the scanner wire with the wire terminal [8] at the end inwards.
- For both scanner wires, be sure to pull out the one wound outwards in the paper feed direction [9] from above the drive pulley and the one wound inwards in the paper exit direction [10] from above the drive pulley.

4. For each scanner wire that has been wound outside of the drive pulley, pass it through the wire stopper /Fr [11] or /Rr [12], pulley /1 [13] and the outside of the pulley [15] of the V-mirror unit [14] in order, and then fasten it to the respective wire stoppers.

Note

- Each wire stopper is provided with 2 grooves. Fix the metal ball [7] in the groove on the outside for the wire stopper /Fr [11], and fix it in the groove on the inside for the wire stopper /Rr [12].

5. For each scanner wire that has been wound inside of the drive pulley, reverse it by the pulley /2 [16], pass it through the inside of the pulley [15] of the V-mirror unit [14] and pulley /3 [17], and then hook the wire terminal [8] to the spring fixing plate [18].
6. Paste the wire restriction sheet [19] to the wire stoppers /Fr [11] and /Rr [12]. (The sheet is common to both the front and rear stoppers.)

Note

- Be sure to paste it so that the wire restriction sheet comes in contact with the wire.

7. Fasten tentatively each of the spring fixing plates with the screw [20].
8. Loosen once the screw [20], attach the spring [21] between 2 spring fixing plate [18] and then fix each spring fixing plate with the screw [20].

Note

- After reinstalling each scanner wire, check the respective exposure unit mounting brackets [22] if they turn to the inside.

9. Be sure that the reinstallation of the following parts follows the removal steps in reverse.

10. After reinstalling the scanner wire, conduct the following items in order.

- Mirror unit positioning (require the jigs)
- Scanner restart timing adjustment
(Refer to [1.5.3.19 Scanner Restart Timing Adj. \(Timing Adjustment\)](#))
- Distortion adjustment original glass (main scan direction)
(Refer to [1.5.3.35 Distortion Adjustment](#))
- Distortion adjustment original glass (sub scan direction)
(Refer to [1.5.3.35 Distortion Adjustment](#))
- Distortion adjustment ADF (main scan direction)
(Refer to [1.5.3.35 Distortion Adjustment](#))
- Distortion adjustment ADF (sub scan direction)
(Refer to [1.5.3.35 Distortion Adjustment](#))

2.2.18 Lift wire

Note

- The same procedure for removing/reinstalling the lift wire is used for both the trays /1 and /2.

(1) Procedure

1050fs2754c

1. Remove the tray. (Refer to [F.5.7.5 Removing/reinstalling the tray](#))
2. Remove 2 screws [1] and 2 screws [2] with washer.
3. Disconnect the connector [3] and then remove the tray front cover [4].

1050fs2755c

1050fs2756c

4. Remove the E-ring [1].
5. Remove 5 screws [2].
6. Remove the screw [3].
7. Remove the bearings [5] and [6], and the torque restriction gear (1250/1250P/1052 only) [7] together with the gear mounting plate [4].

Note

- When removing the gear mounting plate [4], take note that the gear comes off freely.
- When reinstalling it, make sure that the step [8] of each shaft gets in the gear mounting plate [4] securely.
- Be sure to reinstall the bearing (large) [5] from the outside of the gear cover [4] and the bearing (small) [6] from the inside.

8. Remove the E-ring [1] and then remove the gear [2] and the pin [3].
9. Remove the E-ring [4].

10. Slide the pulley [1] and remove the wire end [2] from the shaft hole [3].

Note

- When reinstalling it, lift up the paper lift plate a little to give slack to the lift wire you want to insert. Then insert the wire ends [2] into the shaft hole [3] one at a time and fix it with the pulley [1].

11. Remove the E-rings [1], 1 each provided at the 2 places and then remove the wire covers [2], 1 each.
12. Remove the lift wires /Fr1 [4] and /Fr2 [5] from the pulley [3].

Note

- When reinstalling it, make sure that the lift wires /Fr1 [4] and /Fr2 [5] are contained in the wire cover [2] and they are not crossing each other.

13. Pull out from up to down the lift wires /Fr1 and /Fr2 [2] from the arm [1] of the paper lift plate.

Note

- Be sure to pull out the lift wire gently and take care that the lift wire does not get damaged by the edges of the metal frame.

1050fs2760c

14. Remove the screw [1] and then remove the ground [2].
15. Remove 3 screws [3] and then remove the cover [4].
16. Remove 4 screws [5] and then remove the connector mounting plate [6].

1050fs2761c

17. Remove the E-ring [1].
18. Slide the pulley [2] and remove the wire end [3] from the shaft hole [4].

1050fs2762c

19. Remove the E-rings [1], 1 each provided at the 2 places and then remove the wire covers [2], 1 each.
20. Remove the lift wires /Rr1 [4] and /Rr2 [5] from the pulley [3].

Note

- When reinstalling it, make sure that the lift wires /Rr1 [4] and /Rr2 [5] are contained in the wire cover [2] and they are not crossing each other.

21. Pull out from up to down the lift wires /Rr1 and /Rr2 [2] from the arm [1] of the paper lift plate.

Note

- Be sure to pull out the lift wire gently and take care that the lift wire does not get damaged by the edges of the metal frame.

22. Reinstall the preceding parts following the removal steps in reverse.

Note

- The lift wire /Fr is gray in color and /Rr black in color.
- Make sure that the lift wires do not cross each other.
- After reinstall the lift wire, check the paper lift plate to ensure it is level.

2.2.19 Paper feed assist fan (1250/1250P/1052 only)

Note

- The same removal and reinstallation procedures of the paper feed assist fans /Fr1 (FM21), /Rr1 (FM20) and /Fr2 (FM23), /Rr2 (FM24) are used for trays1 and 2.

(1) Procedure

1. Remove the tray. (Refer to [F.5.7.5 Removing/reinstalling the tray](#))
2. Loosen a screw [1].
3. With the release lever [2] placed at its original position, hold the stopper [3] and tighten the screw [1] to fix the stopper.
4. Remove the tray front cover. (Refer to [G.2.2.18 Lift wire](#))

1050fs2764c

[1] [2]

1050fs2765c

[1] [2] [1]

1050fs2767c

5. Loosen each screws provided at the 4 places [1], and slide the bracket [2] to the arrow-marked direction.
6. Hold down the paper stopper [3] and pull out the lift plate cover [4] upward to remove it.

Note

- When removing the lift plate cover [4], raise up the pick-up roller [5] in the arrow-marked direction to move it out of the way.
- When reinstalling the bracket [2], push it slightly in the opposite direction of removal and fix it with screws.

7. Rotate the gear of the drive section by hand and raise the paper lift plate [1] upward. Move the coupling gear [2] in the arrow-marked direction and then fix the lift plate.

8. Disconnect the connectors [1], 1 each, and the wire binding bands [2], 1 each.

Note

- To make it clear, the picture shows the condition in which the lift plate is removed.

9. Remove the screw [1], the screw [2], the screw [3] and the screws [4], 3 each.

10. Remove the paper guides /Fr [5] and /Rr [6].

Note

- When reinstalling it, be sure to fasten the paper guides /Fr [5] and /Rr [6] with the screws [2] and the screws [3], 3 each. Then tentatively tighten the screws [1] and the screws [4], 3 each and tighten them up fully after placing the paper guides /Fr and /Rr in a vertical position.
- To check the verticality of the paper guides, move the guide plate up and down with copy paper placed on the lift plate and check the clearance of the paper guide.

11. Remove the screws [1], 2 each, of the paper guide /Rr and then remove the paper guide cover [2].

12. Remove the screws [1], 2 each, and then remove the paper stopper mounting plate [2].
13. Remove 6 screws [3], the screw (with a washer and a spring washer) [4] and 3 screws [5], and then remove the fan motor mounting plate [6].

14. Disconnect the connector [1].
15. Remove 2 screws (nuts) [2] and the paper feed assist fans /Rr1 (FM20) and /Rr2 (FM24) [3].

16. Remove the screws [1], 2 each of the paper guide /Fr and then remove the paper guide cover [2].
17. Remove 2 screws [3] and then remove the lever cover [4].

18. Remove 2 screws [1] and then remove the paper stopper mounting plate [2].
19. Remove 6 screws [3], the screw (with a washer and a spring washer) [4] and 3 screws [5], and then remove the fan motor mounting plate [6].

20. Cut off the connector [1] and the wire binding band [2].
21. Remove 2 screws (nuts) [3] and the paper feed assist fans /Fr1 (FM21) and /Fr2 (FM23) [4].

Note

- When reinstalling it, be sure to replace the wire binding band with a new one.

22. Reinstall the preceding parts following the removal steps in reverse.

Note

- After completion of reinstallation, be sure to conduct the paper size detection adjustments. (Refer to [I.5.3.1 Tray Size Adjustment \(Tray Adjustment\)](#))

2.2.20 Paper lift motor**Note**

- The same removal and reinstallation procedures are employed for the tray lift-up motors /1 (M25) and /2 (M34) of the trays1 and 2.

(1) Procedure

1050fs2775c

1050fs2776c

1. Remove the tray. (Refer to [F.5.7.5 Removing/reinstalling the tray](#))
2. Remove 2 screws [1] and 2 screws [2] with washer.
3. Disconnect the connector [3] and then remove the tray front cover [4].

4. Remove 4 screws [1] and then remove the stopper [2] and the cover [3].

5. Remove the E-ring [1].
6. Remove 5 screws [2].
7. Remove the screw [3].
8. Remove the bearings [5] and [6], and the torque restriction gear (1250/1250P/1052 only) [7] together with the gear mounting plate [4].

Note

- When removing the gear mounting plate [4], take note that the gear comes off freely.
- When reinstalling it, make sure that the step [8] of each shaft gets in the gear mounting plate [4] securely.
- Be sure to reinstall the bearing (large) [5] from the outside of the gear cover [4] and the bearing (small) [6] from the inside.

1050fs2777c

1050fs2778c

9. Remove the E-ring [1] and then remove the gear [2] and the pin [3].

10. Remove 2 screws [1].

1050fs2779c

11. Disconnect the connector [1] and the wire binding band [2], and then remove the tray lift-up motors /1 (M25) and /2 (M34) [3].

Note

- For ease of the removal and reinstallation operations, press the release lever [4] so that the coupling gear [5] can raise.

12. Reinstall the preceding parts following the removal steps in reverse.

1050fs2780c

2.2.21 Multi feed detection board (1250/1250P/1052 only)

Note

- When replacing the multi feed detection board /S and /R, be sure to conduct the sensitivity adjustments of the multi feed sensor. (Refer to [I.5.6.5 Adjustment when replacing the multi feed detection board \(main body\) \(1250/1250P/1052 only\)](#))

(1) Procedure

1. Pull out the duplex section from the main body. (Refer to [F.5.9 Duplex Section](#))
2. Remove 2 screws [1] and then remove the cover of the multi feed detection board /R [2].

3. Disconnect the connector [1].
4. Remove 2 screws [2] and then remove the multi-feed detection board /R (MFDBR) [3].

5. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
6. Turn over the registration section and remove the connector [1].
7. Remove 2 screws [2], then remove the multi-feed detection board /S (MFDBS) [3].
8. Reinstall the preceding parts following the removal steps in reverse.

2.2.22 DUPLEX SECTION**Note**

- Be sure to perform this operation with 2 people because the duplex section is heavy.

(1) Procedure

1. Remove the fusing section. (Refer to [F.5.10 transfer section](#))
2. Remove the transfer belt unit. (Refer to [F.5.9.8 Removing/reinstalling the transfer belt unit](#))
3. Remove the registration section. (Refer to [F.5.9.12 Removing/reinstalling the registration section](#))
4. Open the paper reverse-exit section [1].
5. Remove 2 screws [2] and then remove the connector cover [3].

Note

- When reinstalling the connector cover, be sure to set the positioning hole [4] to the projection [5] of the duplex section.

6. Disconnect 5 connectors [1].
7. Remove 4 screws [2] and remove the cable arm [3].

Note

- When reinstalling the cable arm, be sure to set the positioning hole [4] to the projection [5] of the duplex section.

8. Remove the screws [1], 3 each, to release the duplex section [2] from the guide rails /Lt [3] and /Rt [4].
9. Hold the stays /Lt [5] and /Rt [6] with 2 people, and remove the duplex section.

Note

- Be sure place the duplex section in a horizontal place.
- Be sure to avoid placing the duplex section from the front side diagonally since it deforms the open/close door /A [7].

10. Reinstall the preceding parts following the removal steps in reverse.

2.2.23 Fusing temperature sensor /1 (TH1)**Note**

- After reinstalling the fusing temperature sensor /1 (TH1), be sure to check if the wiring harness is not in touch with the fusing roller /Up.

(1) Procedure for removal

1. Pull out the duplex section from the main body. (Refer to [F.5.9 Duplex Section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the web section. (Refer to [F.5.10.15 Replacing the fusing temperature sensor /2 \(TH2\)](#))
4. Disconnect the connector [1].
5. Remove the screw [2] and remove the fusing temperature sensor / 1 assy [3].

Note

- When removing the fusing temperature sensor /1 assy, be careful to avoid the driver from being in touch with the fusing roller /Up [4].

6. Remove the screw [1] and then remove the fusing temperature sensor /1 (TH1) assy [2].
7. Reinstall the preceding parts following the removal steps in reverse.

2.2.24 Fusing temperature sensor /3 (TH3)

Note

- Be sure to make the position adjustments when the roller has cooled down.
- When reinstalling the fusing temperature sensor /3 (TH3), adjust it with the temperature sensor positioning jig /B before fixing it. Be sure to apply Screw-lock to the screw that has been fixed.
- After reinstalling the fusing temperature sensor /3 (TH3), be sure to check if the wiring harness is not in touch with the fusing heating roller.

(1) Procedure for removal

1. Pull out the duplex section from the main body. (Refer to [F.5.9 Duplex Section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the fusing heating roller assy. (Refer to [F.5.10.9 Removing/reinstalling the fusing heating roller assembly](#))
4. Remove the screw [1] and then remove the connector cover [2].
5. Disconnect the connector [4] of the fusing temperature sensor /3 (TH3) [3].

Note

- There are 3 connectors of the fusing temperature sensor in the same place. The number of pins of each connector is different. The connector of the fusing temperature sensor /3 (TH3) is 4 pin connector.

6. Cut off 3 wiring bands [5].

Note

- When attaching a wire binding band, be sure to use a heat-resistant one (P/N:V501010014).

7. Remove the 2 screw [6] and then remove the fusing temperature sensor /3 (TH3) assy [3].

(2) Procedure for reinstallation

1. Insert the temperature sensor positioning jig /B [3] between the fusing temperature sensor /3 (TH3) [1] and the fusing heating roller [2].
2. Adjust the position of the fusing heating sensor /3 (TH3) so that it becomes flush with the temperature sensor positioning jig /B, and then fix it with 2 screws [4].

Note

- Be sure to adjust the distance a [5] between the fusing temperature sensor /3 (TH3) and the fusing heating roller so that it becomes flush with the temperature sensor positioning jig /B. Standard value: $a = 0.7 \pm 0.1\text{mm}$
- Be sure to set the fusing temperature sensor /3 (TH3) parallel to the roller.

3. Apply Screw-lock to 2 screws [4].
4. Be sure that the reinstallation of the following parts follows the removal steps in reverse.

2.2.25 Thermostat /1 (TS1), /2 (TS2)

Note

- Be sure to make the position adjustments when the roller has cooled down.
- When reinstalling the thermostat /1 (TS1) and /2 (TS2), adjust it with the thermostat positioning jig /A before fixing it. Be sure to apply Screw-lock to the screw that has been fixed.
- After reinstalling the thermostat /1 (TS1), /2 (TS2), be sure to check if the wiring harness is not in touch with the fusing roller /Up.

(1) Procedure for removal

1. Pull out the duplex section from the main body. (Refer to [F.5.9 Duplex Section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Remove the web section. (Refer to [F.5.10.15 Replacing the fusing temperature sensor /2 \(TH2\)](#))
4. Remove the faston terminals [1], 2 each.
5. Remove the screws [2], 1 each, and remove the thermostats /1 (TS1) [3] and /2 (TS2) [4].

(2) Procedure for reinstallation

1. Install the faston terminals [3], 2 each, to the thermostats /1 (TS1) [1] and /2 (TS2) [2].
2. Insert the thermostat positioning jig /A [5] between the thermostat /1 (TS1) [1] and the fusing roller /Up [4].
3. Adjust the position of the thermostat /1 (TS1) so that it becomes flush with the thermostat positioning jig /A, and then fix it with the screw [6].
4. Following the steps 2 and 3, install the thermostat /2 (TS2) [2].

Note

- Be sure to adjust the distance a [6] between each thermostat and the fusing roller /Up so that it becomes equal to the thickness of the thermostat positioning jig /A. Standard value: $a = 3.0 \pm 0.2\text{mm}$
5. Apply Screw-lock to the screw [6].
 6. Be sure that the reinstallation of the following parts follows the removal steps in reverse.

2.2.26 Thermostat /3 (TS3)

Note

- Be sure to make the position adjustments when the roller has cooled down.
- When reinstalling the thermostat /3 (TS3), adjust it with the thermostat positioning jig /B before fixing it. Be sure to apply Screw-lock to the screw that has been fixed.
- After reinstalling the thermostat /3 (TS3), be sure to check if the wiring harness is not in touch with the fusing heating roller.

(1) Procedure for removal

a0g6t3c257ca

1. Pull out the duplex section from the main body. (Refer to [F.5.9 Duplex Section](#))
2. Remove the fusing section. (Refer to [F.5.10.3 Removing/reinstalling the fusing section](#))
3. Open the fusing heating roller assy. (Refer to [F.5.10.9 Removing/reinstalling the fusing heating roller assembly](#))
4. Remove 2 faston terminals [1].
5. Remove the screw [2], and then remove the thermostat /3 (TS3) [3].

(2) Procedure for reinstallation

a0g6t3c258ca

1. Install 2 faston terminals [2] to the thermostat /3 (TS3) [1].
2. Insert the thermostat positioning jig /B [4] between the thermostat /3 (TS3) [1] and the fusing heating roller [3].
3. Adjust the position of the thermostat /3 (TS3) so that it becomes flush with the thermostat positioning jig /B, and then fix it with the screw [5].

Note

- Be sure to adjust the distance a [6] between the thermostat /3 (TS3) and the fusing heating roller so that it becomes equal to the thickness of the thermostat positioning jig /B.
Standard value: $a = 3.0 \pm 0.2\text{mm}$

4. Apply Screw-lock to the screw [5].
5. Be sure that the reinstallation of the following parts follows the removal steps in reverse.

2.2.27 Hard disk /1 (HDD1)

(1) Procedure

a0g6t3c297ca

a0g6t3c298ca

1. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
2. Remove 12 screws [1].
3. Remove and turn over the cover [2], and disconnect 2 connectors [3].

4. Remove 4 screws [1] and then remove the hard disk mounting bracket [2].
5. Remove 4 screws [3] and then remove the hard disk /1 (HDD1) [4].
6. Reinstall the preceding parts following the removal steps in reverse.

2.2.28 Hard disk /2

(1) Procedure

For the disassembling and assembling procedures for the hard disk /2 (HDD2), refer to "[G.20.3.6 Hard disk /2 \(HDD2\)](#)".

3. DF-615 /616

3.1 Items not allowed to be disassembled/reassembled

3.1.1 DF skew adjustment screw

Note

- The skew adjustment by the DF skew adjustment screw [1] is not allowed as a rule.

3.2 List of disassembling and assembling parts

No.	Section	Parts name
1	DF main body	DF
2	Cover	Cover /Fr, /Rr, /Lt

3.3 Disassembling and assembling procedures

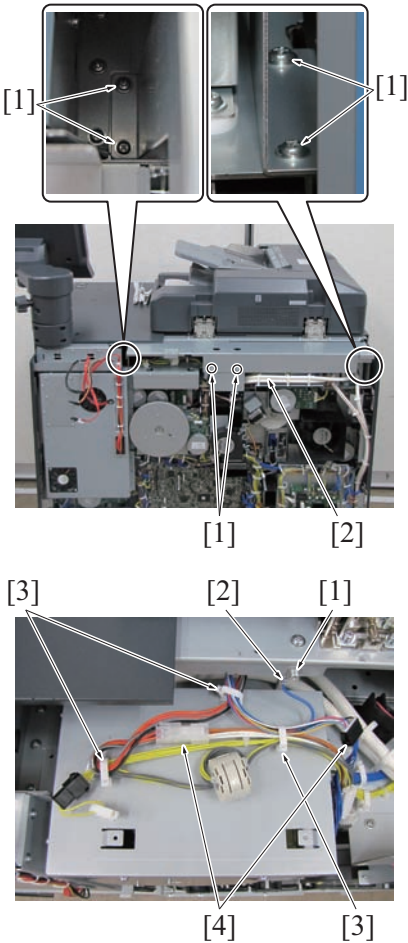

3.3.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

3.3.2 DF

(1) Procedure for removal

1. Remove the main body rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Remove the upper cover /Rr1 of the main body. (Refer to [G.2.2.8 Upper cover /Rr1](#))
3. Remove the upper cover /Rr2 of the main body. (Refer to [G.2.2.9 Upper cover /Rr2](#))
4. Remove 6 screws [1] and remove the exterior mounting plate [2] of the main body.
5. Remove the screw [1], and remove the ground terminal [2].
6. Remove 3 clamps [3] and disconnect 2 connectors [4].

df603fs2023c

7. Remove 2 screws [1] and then remove 2 angle adjustment plates [2].

df603fs2025c

8. Open the DF until it is vertical.
9. Remove 3 screws [1] and then remove the cable conduit [2].

df603fs2026c

10. Pull out the cable [1] to the upper side of the main body.

df603fs2027c

11. Close the DF, remove 2 screws [1] each, and then remove 2 fixing plates /Rr [2].

df603fs2028c

12. Open the DF until it is vertical.
13. Remove 1 screw [1] on each plate while supporting the DF, and remove 2 fixing plates /Fr [2].
14. Remove the DF from the main body.

Note

- The DF may fall to the back side when the fixing plate /Fr [2] is removed. Be sure to conduct operations while supporting it.

(2) Procedure for reinstallation

df603fs2029c

1. With the DF set to the main body, temporarily hold 2 fixing plates / Fr [2] with a screw [1].

Note

- For the fixing plate /Fr [2], be sure to insert the potbellied hole section [3] under the guide screw [4].

2. Remove 2 screws [5] and remove the original stopper plate /Lt [6].
3. Remove the cable conduit following the removal steps in reverse.
4. Reinstall other parts following the removal steps 2 to 6 in reverse.

5. Install 2 DF positioning jigs [2] in 2 holes [1] provided in the place to which the original stopper plate /Lt is attached.

6. Close the DF slowly and set the reference hole (oval) [1] and the reference hole (round) [2] to the DF positioning jigs [3].

7. With the positions put together, reinstall 2 fixing plates /Rr [2] with 2 screws [1] each.

8. Open the DF and tighten the screw [2], 1 for each plate, of the fixing plates /Fr [1].

df603fs2034c

9. Remove the DF positioning jig and reinstall the original stopper plate /Lt [2] with 2 screws [1].

df603fs2035c

10. Close the DF and check to see if each of 2 stopper pieces [1] on the DF side comes in touch with the dent [2] in the original stopper plate /Lt on the main body side.

df603fs2036c

11. When the stopper pieces do not get contact with the dent on the original stopper plate /Lt at the same time, make adjustments by turning the adjusting screw A [1].

Note

- When a satisfactory adjustment cannot be obtained with the adjusting screw A [1], make adjustments turning the adjusting screws A [1] and B [2] alternately.

12. Repeat the steps 10 and 11 until each of the stopper pieces get contact with the dent on the original stopper plate /Lt at the same time.
13. Reinstall the angle adjustment plate following the removal step 7 in reverse.
14. Reinstall the main body rear cover.

3.3.3 Cover /Fr, /Rr, /Lt

(1) Procedure

1. Open the DF.
2. Remove 4 screws [1].

3. Close the DF.
4. Remove the screw [1].

5. Open the open-close cover.
6. Remove the screw [1].
7. Remove the cover /Fr [2].

8. Remove 4 screws [1] and remove the cover /Rr [2].

[1]

[2]

[1]

a10tt3c041ca

[4]

[3]

[1]

[2]

a10tt3c042ca

9. Open the open-close cover.

10. Remove the screw [1] and remove the sensor cover [2].

11. Remove 2 screws [3] and remove the cover /Lt [4].

12. Reinstall the preceding parts following the removal steps in reverse.

4. PF-703

4.1 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover	Right cover
2		Rear cover
3		Front door
4		Tray front cover
5	Paper feed tray section	Tray
6		Lift wire
7		Paper feed assist fan /Fr1 (FM1), /Fr2 (FM5), /Fr3 (FM9), /Rr1 (FM2), /Rr2 (FM6), /Rr3 (FM10)
8		paper leading edge separation fan /Fr1 (FM3), /Fr2 (FM7), /Fr3 (FM11), /Rr1 (FM4), /Rr2 (FM8), Rr3 (FM12)(
9		Paper lift motor /1 (M7), /2 (M8), /3 (M9)
10		Paper feed check window
11	Others	PF drive board (PFUDB)
12	Cover	Left cover /Up, /Lw (PI-PFU only)
13	Others	Multi feed detection boards /S (MFDBS) and /R (MFDBR)

4.2 Disassembling and assembling procedures

4.2.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

4.2.2 Right cover

(1) Procedure

1. Remove 2 screws [1] and remove the paper feed cover [2].
2. Remove 10 screws [3] and then remove the right cover.
3. Reinstall the preceding parts following the removal steps in reverse.

4.2.3 Rear cover

(1) Procedure

1. Remove 2 screws [1] and then remove the PI-PFU cover [2] (PI-PFU only).
2. Remove 11 screws [3] and then remove the rear cover [4].
3. Reinstall the above parts following the removal steps in reverse.

4.2.4 Front door

(1) Procedure

a0gdt3c125ca

1. Open the front door [1].
2. Remove 2 screws [2] and remove the mounting plate [3] and the washer [4], and then remove the front door [1].
3. Reinstall the above parts following the removal steps in reverse.

4.2.5 Tray front cover

(1) Procedure

a0gdt3c047ca

1. Pull out the paper feed tray. (Refer to [G.4.2.6 Tray](#))
2. Remove 4 screws [1] and 2 screws [2] and disconnect the connector [3], and then remove the tray front cover [4].

4.2.6 Tray

(1) Procedure for pulling out the tray

1. Open the front door [1].
2. Insert a driver into the hole [2] and pull out the tray [4] while lifting up a little the tray lock lever [3].

(2) Procedure for pulling out the tray at the maximum

⚠ Note:

- Be sure to pull out the trays one at a time. Avoid pulling out more than 2 trays at once. It causes the PF to turn over.

1. Pull out the paper feed tray. (Refer to [G.4.2.6.\(1\) Procedure for pulling out the tray](#))
2. Remove the stopper screws [2], 1 each, provided on the right and left rails [1] and further pull out the tray.
3. Reinstall the above parts following the removal steps in reverse.

(3) Procedure for removing the tray

⚠ Note:

- Be sure to perform this operation with 2 people because the tray unit is heavy.

Note

- The removing/installing procedure of the tray is common between the trays1, 2, and 3 but the installation position is different between the tray1 and the trays2 and 3 at some part. This section shows the procedure for the tray 1 and the different parts are described in the procedure.
- Be sure to lift the tray by holding the specified positions. Holding it at positions other than those positions specified damage the tray, thus resulting in a paper feed jam.

1. Pull out the tray at the maximum. (Refer to [G.4.2.6.\(2\) Procedure for pulling out the tray at the maximum](#))
2. Remove the screws [1] and [2], 2 each, and then remove the jam release gear assy [3]. (Tray1 only)

Note

- Be careful not to let 2 screws [1] oblique when reinstalling it. When it is hard to reinstall, remove the tray front cover (refer to [G.4.2.5 Tray front cover](#)) and loosen the screw [4] to remove the jam release knob [5].

3. Remove screws [1], 2 each, from the left and right rails.

4. Loosen 2 screws [1] and set the side guide [2] to the minimum size.
5. Remove the tray by holding the specified positions [4] of the tray [3] and lifting upward.

⚠ Note:

- Be sure to lift the tray with 2 people.

Note

- Be sure to hold the specified positions [4] and not to hold the positions [5] that can be easily deformed. This may affect the paper tray, thus resulting in a jam.

6. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling it, be sure to insert the 4 knobs [1] on the rail to the shallow groove [2] in the case of the tray1. In the case of the trays2 and 3, be sure to insert the knobs to the deep groove [3].

4.2.7 Lift wire

(1) Procedure

1. Remove the tray. (Refer to [G.4.2.6 Tray](#))
2. Remove the tray front cover. (Refer to [G.4.2.5 Tray front cover](#))
3. Remove the paper leading edge separation fan /Fr1 (FM3), /Fr2 (FM7), /Fr3 (FM11), /Rr1 (FM4), /Rr2 (FM8), /Rr3 (FM12))
4. Remove the paper lift gear assy. (Refer to [G.4.2.10 Paper lift motor /1 \(M7\), /2 \(M8\), /3 \(M9\)](#))
5. Remove the E-ring [1] and the gear [2].

Note

- When reinstalling it, be sure to reinstall the gear [2] with the aligned position by inserting the screwdriver to the quadrilateral hole [3] and rotating the gear [4] going through the hole [5] of the gear [4].

6. Remove 4 E-rings [1] and then remove 1 each of the pulley covers [2].
7. Lift the paper lift plate [3] horizontally to loosen 1 each of the lift wires /Rt [4] back and forth, and then remove it from the pulleys [5] and [6].
8. Lift the paper lift plate [3] horizontally to loosen 1 each of the lift wires /Lt [7] back and forth, and then remove it from the pulleys [6].

Note

- When hooking the lift wire to the pulley, be sure to hook the shorter lift wire /Lt [7] to the inside and the longer lift wire /Rt [4] to the outside.
- When installing the wires, make sure that the lift wires are properly routed inside the wire covers and are not crossed each other.

9. Remove the pulleys [5] and [6].

Note

- When reinstalling the pulley, be sure that the metal bearing comes to the outside.

10. Remove the E-ring [1] and move the bearing [2] inward.
11. Remove the E-ring [3] and move the gear [4] inward and then remove the pin [5].
12. Remove the E-ring [6] and move the bearing [7] inward.

13. Remove the lift wire /Lt [3] from the shaft hole [4] by moving the pulley [1] inward [2], and then remove the lift wire /Rt [6] by moving the pulley [5].

Note

- Be sure to put the shorter lift wire /Lt [7] to the inside and the longer lift wire /Rt [4] to the outside.

14. Pull out the lift wires /Rt and /Lt [3] from the hole [2] of the lift plate arm [1] to downward.

Note

- When reinstalling it, be sure to put the circular cylindrical shape wire end [4] from the downside of the hole [2].
- Be sure to install the shorter lift wire /Lt to the lift plate arm [5] and the longer lift wire /Rt to the lift plate arm [6].
- When pulling/installing it, be sure to pull out carefully and be careful not to damage it with the corner of the metal plate.

15. Reinstall the above parts following the removal steps in reverse.

4.2.8 Paper feed assist fan /Fr1 (FM1), /Fr2 (FM5), /Fr3 (FM9)

(1) Procedure

1. Pull out the tray at the maximum. (Refer to [G.4.2.6 Tray](#))
2. Remove the side guide assy /Fr and remove the cover, and then open the side guide assy. (Refer to [F.7.2.2.\(3\) Removing procedures of the shutter solenoids /Fr1 \(SD4\), /Fr2 \(SD6\) and /Fr3 \(SD8\)](#))
3. Remove the screw [1] and then remove the supporting bracket [2] and the side guide lock lever [3].

a0gdt3c101ca

4. Remove 2 screws [1] and remove the reinforcing hinge [2].

a0gdt3c102ca

5. Disconnect the connector [1].

a0gdt3c103ca

6. Remove 3 screws [1] and then remove the protecting sheet [2], the paper feed assist fans /Fr1 (FM1), /Fr2 (FM5) and /Fr3 (FM9) [3].

Note

- When reinstalling it, be sure to install so that the wiring harness comes to the position in the picture.
- Be sure to install so that the protecting sheet does not slack.

7. Reinstall the above parts following the removal steps in reverse.

4.2.9 Paper leading edge separation fan /Fr1 (FM3), /Fr2 (FM7), /Fr3 (FM11), /Rr1 (FM4), /Rr2 (FM8), /Rr3 (FM12)

Note

- Since the bottom of the tray 1 has the horizontal conveyance unit, the height inside the tray is different from the height of the trays 2 and 3. Therefore, the tray needs to be removed to remove the paper leading edge separation fan of the tray 1. In the case of the trays 2 and 3, the paper leading edge separation fan can be removed while it is installed to PF.

(1) Procedure

a0gdt3c006ca

[1]

a0gdt3c135ca

[8]

a0gdt3c007ca

1. Remove the tray. (Refer to [G.4.2.6 Tray](#))
2. Remove 4 screws [1] and then remove the fan cover [2].

3. Disconnect 2 connectors [1].
4. Remove the screw [2] and then remove the 2 wiring harness clamp [3].

5. Remove 3 screws [1] and remove the paper leading edge separation fan /Fr1 (FM3) [2] by moving it in the arrow-marked direction [3].
6. Remove 3 screws [4] and remove the paper leading edge separation fan /Rr1 (FM4) [5] by moving it in the arrow-marked direction [6].

Note

- When reinstalling the paper leading edge separation fans / Fr1 [2] and /Rr1 [5], be sure to press them against the air duct [7] and secure the screws so that there is no space between the contacting section [8].

7. Reinstall the above parts following the removal steps in reverse.

(2) Procedure for the trays 2 and 3

1. Remove the stopper and pull out the tray at the maximum. (Refer to [G.4.2.6 Tray](#))
2. Remove 4 screws [1] and then remove the fan cover [2].

3. Disconnect 2 connectors [1].
4. Remove 3 screws [2] and remove the paper leading edge separation fans /Fr2 and /Fr3 [3].
5. Remove 3 screws [4] and remove the paper leading edge separation fans /Rr2 and /Rr3 [5].

Note

- When reinstalling the paper leading edge separation fans /Fr2, /Fr3 [3] and /Rr2, /Rr3 [5], be sure to press them against the air duct [6] and secure the screws so that there is no space between the contacting section [7].

6. Reinstall the above parts following the removal steps in reverse.

4.2.10 Paper lift motor /1 (M7), /2 (M8), /3 (M9)

(1) Removing procedure of the paper lift gear assy

Note

- The removing/installing procedure of the paper lift gear assy is common between the trays 1, 2, and 3 but the installation position is different at some part. This section shows the procedure for the tray 1 and the different parts are described in the procedure.

1. Remove the tray. (Refer to [G.4.2.6 Tray](#))
2. Remove the tray front cover. (Refer to [G.4.2.5 Tray front cover](#))
3. Remove 4 screws [1] and then remove the fan cover [2].

a0gdt3c105ca

4. Remove 4 screws [2] (in the case of the tray1 [1]) or 4 screws [4] (in the case of the trays2 and 3 [3]) and then remove the reinforcing plate [5].

a0gdt3c106ca

5. Disconnect the connector [1].

a0gdt3c107ca

6. Remove 5 screws [1], the E-ring [2], and the bearing [3] and then remove the paper lift gear assy [4].
7. Reinstall the above parts following the removal steps in reverse.

(2) Removing procedure of the paper lift motor

1. Remove the paper lift gear assy. (Refer to [G.4.2.10.\(1\) Removing procedure of the paper lift gear assy](#))
2. Remove 2 screws [1] and then remove the support bracket [2].

**Note**

- When reinstalling it, be sure to put the pin [2] of the arm [1] into the hole [3] and the pin [4] into the hole [6] of the support bracket [5].

3. Remove the E-ring [1] and remove the bearing [2].

Note

- When reinstalling it, be sure to align the bearing [3] on the opposite side.

4. Remove the E-ring [4].
5. Remove 3 screws [5].

a0gdt3c111ca

6. Remove 5 screws [1], and then remove the top of the paper lift gear assy [2].

Note

- When reinstalling it, be sure to align 3 D-cut [3] positions of the shaft and then tighten the screw [1].

a0gdt3c112ca

7. Remove 2 screws [1], and then remove the paper lift motor [2].
8. Reinstall the above parts following the removal steps in reverse.

4.2.11 Paper feed check window**(1) Procedure**

a0gdt3c126ca

1. Pull out the paper feed tray. (Refer to [G.4.2.6 Tray](#))
2. Remove 2 screws [1] and then remove the paper feed check window [2].
3. Reinstall the above parts following the removal steps in reverse.

4.2.12 PF drive board (PFUDB)

(1) Procedure

1. Remove the rear cover. (Refer to [G.4.2.3 Rear cover](#))
2. Disconnect all connectors.
3. Remove 8 clamps [1] and then remove the PF drive board (PFUDB).
4. Reinstall the above parts following the removal steps in reverse.

4.2.13 Left cover /Up, /Lw (PI-PFU only)

(1) Procedure

1. Remove 2 screws [1] and remove the mounting brackets [2], [3].
2. Remove 4 screws [2] and then remove the left cover /Up [5].
3. Remove the screws [6], 2 each, and then remove the mounting brackets [7], [8].
4. Remove 9 screws [4] and then remove the left cover /Lw[10].
5. Reinstall the above parts following the removal steps in reverse.

4.2.14 Multi feed detection boards /S (MFDBS) and /R (MFDBR) (PI-PFU only)

(1) Procedure

1. Remove the exit conveyance unit (FA-501). (Refer to [F.7.6.1.\(2\) Removing procedure of the PI-PFU exit conveyance unit \(FA-501\)](#))
2. Disconnect the connector [1] and 2 screws [2] and then remove the multi feed detection board /S (MFDBS) [3].

3. Remove 2 screws [1] and remove the cover [2].

a0gdt3c130ca

[2]

a0gdt3c131ca

4. Disconnect the connector [2] and 1 screws [2] and then remove the multi feed detection board /R (MFDBS) [3].

5. Check the stamp letter [1] placed on the multi feed detection board /S and /R, and rotate the rotary switch [2] on the multi feed detection drive board (MFDDB) as per following table.

Stamp letter	Rotary switch
A	A
B	B
C	C
D	D
F	F

6. Reinstall the above parts following the removal steps in reverse.

Note

- After the installation, be sure to conduct the adjustment which is conducted in replacing the multi feed detection board (PI-PFU). (Refer to [1.5.6.11 Adjustment when replacing the multi feed detection board \(PI-PFU\)](#))

5. PF-706

5.1 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover	Right cover
2		Rear cover
3		Front door
4		PF drive board (PFUDB)
5	Tray section	Tray
6		Lift wire
7		Paper feed assist fans /Fr and /Rr
8		Lift motor
9		Paper feed sensor
10	Conveyance section	Conveyance exit unit
11		Vertical conveyance units /Up and /Lw

5.2 Disassembling and assembling procedures

5.2.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

5.2.2 Right cover

(1) Procedure

pf701fs2026c

1. Remove 6 screws [1] and then remove the right cover [2].
2. Reinstall the above parts following the removal steps in reverse.

5.2.3 Rear cover

(1) Procedure

1. Remove the screws [1], 2 each, and then remove 2 stays [2].
2. Remove 10 screws [3] and then remove the rear cover [4].
3. Reinstall the above parts following the removal steps in reverse.

5.2.4 Front door

(1) Procedure

1. Open the front door [1].
2. Remove 2 screws [2] and then remove the front door [1] after removing the mounting plate [3].

5.2.5 PF drive board (PFUDB)

(1) Procedure

a0gct3c031ca

1. Remove the rear cover. (Refer to [G.5.2.3 Rear cover](#))
2. Disconnect the connector [1].
3. Remove 8 clamps [2] and then remove the PF drive board (PFUDB).

5.2.6 Tray

⚠ Note

- Be sure to perform this operation with 2 people because the tray unit is heavy.
- Be sure to pull out the trays one at a time. Avoid pulling out more than the 2 trays at once. This may cause the PF to turn over.

Note

- The removing/reinstallation procedures of the trays are the same for all the trays 1 to 3. The explanation here is of tray1.
- When raising up the tray, be sure to hold it at the specified positions. Holding it at positions other than those positions specified damage the tray, thus resulting in a paper feed jam.

(1) Procedure

pf701fs2030c

1. Open the front door [1].
2. Insert a driver into the hole [2] and pull out the tray [4] while lifting up a little the tray lock lever [3].
3. If any paper remaining, remove it.

pf701fs2031c

4. Remove the stopper screws [2], 1 each, provided on the right and left rails [1] and further pull out the tray.

5. Remove the screws [1], 2 each, provided on the right and left rails and lift up the tray [2] at the specified positions to remove it.

Note

- When reinstalling it, be sure to check the knobs [3] provided on 4 rails to ensure they get into the notches [4] of the tray securely.
- When raising up the tray, be sure to hold it at the specified positions [5] and raise it up with 2 persons.
- Do not hold the part indicated with [6] as the part can easily become deformed, which adversely affects paper feed resulting in a paper jam.

6. Reinstall the above parts following the removal steps in reverse.

pf701fs2032c

5.2.7 Lift wire**Note**

- The removing/reinstalling procedure of the lift wire is the same for trays /1 to /3.

(1) Procedure

1. Remove the tray.
2. Remove 2 screws [1] and then remove the washer and 4 screws [2].
3. Disconnect the connector [3] and remove the front cover [4] of the tray.

4. Remove the E-ring [1].

5. With the pulley [1] slid, pull out the wire end [2] from the hole of the shaft [3].

Note

- When reinstalling the pulley, be sure to raise the lift plate a little to give slack to the wire you are inserting. Then insert the wire ends [2], one at a time, into the shaft hole and fasten it with the pulley [1]. In this way, the wires can be inserted easily.

pf701fs2036c

pf701fs2037c

pf701fs2038c

pf701fs2039c

6. Remove the E-rings [1], 1 each, and then remove the wire cover [2].
7. Remove the wires /Fr1 [4] and /Fr2 [5] from the pulley [3].

Note

- When installing the wires, be sure to check to see if they are contained in the wire cover [2] and do not cross each other.

8. Pull out the wire /Fr [2] from the lift plate arm [1].

Note

- When pulling out the wire, pull it out gently and be careful not to damage it with the corner of the metal frame.

9. Remove the E-ring [1].
10. Slide the pulley [2] and remove the wire end [3].

11. Remove the E-ring [1].
12. Remove the pulley cover [2] and then remove the wire /Rr [3] from the pulley [4].
13. Pull out the wire /Rr [3] from the lift plate arm [5].
14. Reinstall the above parts following the removal steps in reverse.

Note

- The wire /Fr is red in color and the wire /Rr is dark blue.
- Be sure to insert each wire into the corresponding shaft hole. The shaft hole on the center side of the tray is used for the shorter wire.
- Check the wires to see if they cross each other.
- After completion of installation, check the lift plate to see if it is horizontal.

5.2.8 Paper feed assist fan /Fr (FM1/FM3/FM5), /Rr (FM2/FM4/FM6)

Note

- The removal and reinstallation procedures of the paper feed assist fans are the same for the trays 1 to 3.

(1) Procedure

pf701fs2063c

a0gct3c032ca

pf701fs2040c

1. Remove the tray. (Refer to [G.5.2.6 Tray](#))
2. Push in the release lever [1] and insert the screw [2] into the hole [3] to fasten the release lever [1].
3. Remove the tray front cover. (Refer to [G.5.2.7 Lift wire](#))

4. Remove 4 stepped screws [1] and 4 screws [2], and remove the paper guide support plates /Fr [3] and /Rr [4].

Note

- There is an E-ring on the stepped screw to prevent coming off. Be sure to remove this E-ring together.

5. Loosen the 2 screws [1] and move the metal fitting [2] in the arrow-marked direction.
6. Hold down the paper stopper [3] and pull out the lift plate cover [4] upward to remove it.

Note

- When removing it, lift up the pick-up roller for evacuation.
- When reinstalling the bracket [2], push it slightly in the opposite direction of removal and fix it with screws.

[2] pf701fs2041c

a0gct3c033ca

a0gct3c034ca

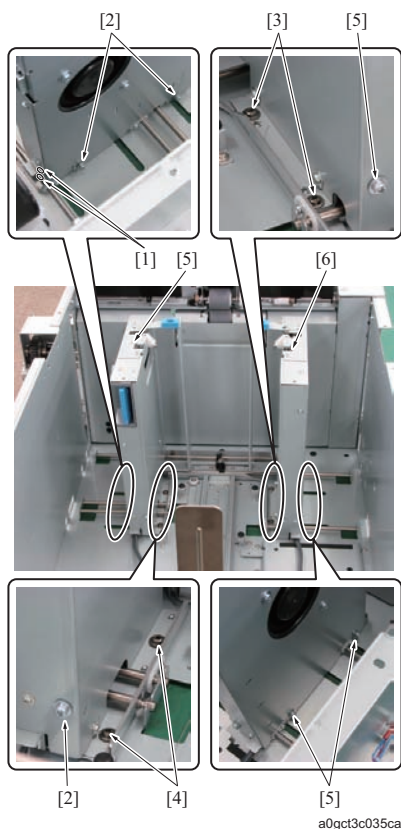

7. Rotate the gear of the drive section by hand to raise up the lift plate [1] upward and move the coupling gear [2] in the arrow-marked direction to fix the lift plate.

8. Remove 3 wire binding bands [1] and disconnect 2 connectors [2].

Note

- To make it clear, the picture shows the condition in which the lift plate is removed.

9. Move the 2 small-size guides [1] inward as shown in the picture.

10. Remove 2 screws [1], 3 screws (including the washers) [2], 2 screws [3], 2 screws [4] and 3 screws (including the washers) [5].
11. Remove the paper guides /Fr [6] and /Rr [7].

Note

- When reinstalling it, be sure to fasten the paper guides /Fr [6] and /Rr [7] with the screws [3] and the screws [4], 2 each. Then tentatively tighten 2 screws [1], 3 screws [2] and 3 screws [5], tighten them up fully after placing the paper guides /Fr and /Rr in a vertical position.
- To check the verticality of the paper guides, move the guide plate up and down with copy paper placed on the lift plate and check the clearance of the paper guide.

12. Remove 2 screws [1] of the paper guide /Fr and then remove the paper guide mounting plate [2].
13. Remove 2 screws [3] and then remove the lever cover [4].
14. Remove 8 screws [5] and remove the fan motor mounting plate [6].

a0gct3c037ca

a0gct3c038ca

15. Remove 2 screws [1] of the paper guide /Rr and then remove the paper stopper mounting plate [2].
16. Remove 8 screws [3] and then remove the fan motor mounting plate [4].

17. Remove the wire binding bands [1], 2 each, and disconnect the connectors [2], 1 each.
18. Remove the screws (nuts) [3], 2 each, and then remove the paper feed assist fans /Fr (FM1/FM3/FM5) [4] and /Rr (FM2/FM4/FM6) [5].
19. Reinstall the above parts following the removal steps in reverse.

Note

- After completion of installation, be sure to conduct the paper size detection adjustments.
(Refer to [I.5.3.1 Tray Size Adjustment \(Tray Adjustment\)](#))

5.2.9 Paper lift motor (M42/M43/M44)**Note**

- The removal and reinstallation procedures of the paper lift motor are the same for the trays 1 to 3.

(1) Procedure

pf701fs2050c

1. Remove the tray. (Refer to [G.5.2.6 Tray](#))
2. Remove the tray front cover. (Refer to [G.5.2.7 Lift wire](#))
3. Remove 6 screws [1], and remove the motor cover [2].
4. Remove 2 screws [3].

5. Remove the E-ring [1] and remove the bearing [2].
6. Remove 2 screws [3].
7. Remove 2 screws [4].
8. Remove 4 screws [5].
9. Remove the gear mounting plate [6].

10. Remove the E-ring [1] and then remove the gear [2] and the pin [3].
11. Remove 3 gears [4] together with the shaft.

12. Remove 2 screws [1].

13. Disconnect the connector [1] and remove the paper lift motor (M42/M43/M44) [2].
14. Reinstall the above parts following the removal steps in reverse.

5.2.10 Cleaning the paper feed sensor (PS3/7/11)

(1) Procedure

1. Open the front door [1].
2. Insert a driver into the hole [2] and pull out the tray [4] while lifting up a little the tray lock lever [3].

3. Lift up the pick-up roller [1].
4. Remove 2 screws [2] to remove the sensor mounting plate [3], and then turn over the paper feed sensor [4] for cleaning.
5. Reinstall the above parts following the removal steps in reverse.

5.2.11 Conveyance exit unit

Note

- Be sure to avoid holding the conveyance exit unit at the paper-through section. This may deform the paper-through section and affect the paper through, thus resulting in a jam.

(1) Procedure

1. Disconnect 2 connectors [1].
2. Remove 6 screws [2] and then remove the conveyance exit unit [3].

Note

- Be sure to avoid holding the conveyance exit unit at the paper-through section. This may deform the paper-through section and affect the paper through, thus resulting in a jam.

3. Reinstall the above parts following the removal steps in reverse.

Note

- Be sure to reinstall it so that the lever placed at marked with " ! " [4] of the vertical conveyance unit /Lw comes to the upper side.

5.2.12 Vertical conveyance units /Up and /Lw**Note**

- Be sure to avoid holding the vertical conveyance unit at the paper-through section. This may deform the paper-through section and affect the paper through, thus resulting in a jam.

(1) Procedure

1. Remove the exit conveyance unit. (Refer to [G.5.2.11 Conveyance exit unit](#))
2. Disconnect 2 connectors [1].
3. Remove 4 screws [2] and then remove the vertical conveyance unit /Up [3].

Note

- When reinstalling the Vertical conveyance unit, be sure to align it with the positioning pin [4].

4. Disconnect 3 connectors [1].
5. Remove 4 screws [2] and then remove the vertical conveyance unit /Lw [3].

Note

- When reinstalling the Vertical conveyance unit, be sure to align it with the positioning pin [4].

6. Reinstall the above parts following the removal steps in reverse.

6. LU-409/410

6.1 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover section	Upper door
2		Right cover
3		Front cover
4		Rear cover
5		Front door
6	Up/down section	Lift wire of LU-409
7		Lift wire of LU-410

6.2 Disassembling and assembling procedures

6.2.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

6.2.2 Upper door

(1) Procedure

- Open the upper door [1].
- Remove the hook [3] of spring [2] from the paper feed guide plate [4].
- Remove 2 screws [5] and slide the upper door [1] in the arrow-marked [6] direction. Then remove it upward.
- Reinstall the above parts following the removal steps in reverse.

6.2.3 Right cover

(1) Procedure

- Open the upper door.
- Remove 5 screws [1] and then remove the right cover [2].
- Reinstall the above parts following the removal steps in reverse.

6.2.4 Front cover

(1) Procedure

- Open the upper door.
- Remove the right cover. (Refer to [G.6.2.3 Right cover](#))
- Open the front door [1] and remove the 6 screws [2].
- Close the front door [1], and remove the front cover [3].
- Reinstall the above parts following the removal steps in reverse.

6.2.5 Rear cover

(1) Procedure

1. Open the upper door.
2. Remove the right cover. (Refer to [G.6.2.3 Right cover](#))
3. Remove 13 screws [1] (for LU-409) and then remove the rear cover [2].

Note

- For LU-410, remove 13 screws [1] and the screw [3], that is, 14 screws in all, and then remove the rear cover [2].

4. Reinstall the above parts following the removal steps in reverse.

6.2.6 Front door

(1) Procedure

1. Open the front door [1].
2. Remove 2 screws [4] and then remove the front door.

Note

- When installing the front door [1], be sure to push it in the arrow-marked direction [3] and tighten up the screw [2].

3. Reinstall the above parts following the removal steps in reverse.

6.2.7 LU-409 lift wire

Note

- There are 4 kinds of lift wires different in length. And the following wire: /Fr1 [1], /Fr2 [2], /Fr3 [3], /Fr4 [4], and /Rr1 [5], /Rr2 [6], /Rr3 [7], /Rr4 [8], 8 in all, are employed according to the pulleys arranged from outside toward inside. Lift wires of the same length can be used either on the front and rear sides.
Lift wires /Fr1 [1] and /Rr1 [5]: 769.3mm
Lift wires /Fr2 [2] and /Rr2 [6]: 661.0mm
Lift wires /Fr3 [3] and /Rr3 [7]: 1250.3mm
Lift wires /Fr4 [4] and /Rr4 [8]: 1323.6mm
- When installing the wire, be sure to install the wire end formed of a ball [9] to the wire mounting plate [11] or [12] and the wire end of a cylindrical form [10] to the pulley side.
- For LU-409 and LU-410, the positions on the paper lift plate to which the lift wires /Fr3 [3], /Fr4 [4], /Rr3 [7], /Rr4 [8] are connected are reversed on the right and left sides. Be careful not to mixed the right side with the left side. For LU-409, the lift wires /Fr3 [3] and /Rr3 [7] are connected to the left [11] of the paper lift plate and lift wires /Fr4 [4] and /Rr4 [8] are connected to the right [12].

(1) Procedure for removal

Note

- Be sure to press the tray down switch (SW100) while charging to lower the paper lift plate to the bottom before operation.

1. Open the upper door.
2. Remove the LU from the main body.
3. Remove the following door and covers.
 - Upper door (Refer to [G.7.2.2 HDD installing unit](#))
 - Right cover (Refer to [G.6.2.3 Right cover](#))
 - Front cover (Refer to [G.6.2.4 Front cover](#))
 - Rear cover (Refer to [G.6.2.5 Rear cover](#))
4. Remove 3 screws [1] and then remove the clutch cover [2].

5. Remove the screw [1] and then remove the wiring harness cover [2].
6. Remove the E-ring [3] and remove the gear [4].

7. Pull out the pin [2] from the shaft [1].
8. Remove the E-ring [3] and remove the bearing [4].
9. Remove 4 screws [5] and then remove the paper lift motor assy [6].

Note

- When reinstalling it, be sure to check to see if it gets into the mounting plate securely [8] since the shaft to which it is installed is stepped [7].

10. Remove the E-ring [1].

11. Loosen the lift wire /Rr1 [3] by pressing the rear wire mounting plate /Lt [2] downward and slide the wire end [4] in the arrow-marked direction for removal.

Note

- When installing the wire end [4] of the lift wire /Rr1 [3], be sure to mount it into the installation hole provided on the outside of the rear wire mounting plate /Lt [2].

12. Remove the pulley /Rr1 [5] from the shaft and then remove the lift wire /Rr1 [3].

Note

- When installing it, be sure to wind it 6 turns around the pulley /Rr1 [5] so that the lift wire / Rr1 [3] can be pulled out from above the pulley.
- Be careful that the wire does not overlap each other.

13. Loosen the lift wire /Rr2 [7] by pressing downward the rear wire mounting plate /Rt [6] and slide the wire end [8] in the arrow-marked direction for removal.

Note

- When installing the wire end [8] of the lift wire /Rr2 [7], be sure to mount it into the installation hole provided on the outside of the rear wire mounting plate /Rt [6]. When the wire end [8] will not get into the installation hole provided on the inside, be sure to rewind closely the lift wire /Rr2 [7] that has been wound around the pulley /Rr2 [9] before installing it.

14. Remove the pulley /Rr2 [9] from the shaft and then remove the lift wire /Rr2 [7].

Note

- When installing it, be sure to wind it 6 turns around the pulley /Rr2 [9] so that the lift wire / Rr2 [7] can be pulled out from above the pulley.
- Be careful that the wire does not overlap each other.

15. Remove the E-ring [1].

16. In the same manner as with Step 11 on the rear side, loosen the lift wire /Fr1 [3] by pressing the front wire mounting plate /Lt [2] downward and slide the wire end [4] in the arrow-marked direction for removal.

Note

- When installing the wire end [4] of the lift wire /Fr1 [3], be sure to mount it into the installation hole provided on the outside of the front wire mounting plate /Lt [2].

17. Remove the pulley /Fr1 [5] from the shaft and then remove the lift wire /Fr1 [3].

Note

- When installing it, be sure to wind it 6 turns around the pulley /Fr1 [5] so that the lift wire / Fr1 [3] can be pulled out from above the pulley.
- Be careful that the wire does not overlap each other.

18. Loosen the lift wire /Fr2 [7] by pressing downward the front wire mounting plate /Rt [6] and slide the wire end [8] in the arrow-marked direction for removal.

Note

- When installing the wire end [8] of the lift wire /Fr2 [7], be sure to mount it into the installation hole provided on the inside of the front wire mounting plate /Rt [6]. When the wire end [8] will not get into the installation hole provided on the inside, be sure to rewind closely the lift wire /Fr2 [7] that has been wound around the pulley /Fr2 [9] before installing it.

19. Remove the pulley /Fr2 [9] from the shaft and then remove the lift wire /Fr2 [7].

Note

- When installing it, be sure to wind it 6 turns around the pulley /Fr2 [9] so that the lift wire / Fr2 [7] can be pulled out from above the pulley.
- Be careful that the wire does not overlap each other.

20. Remove the E-ring [1] and then remove the pulley /Fr3 [2] from the shaft.
21. With the lift wire /Fr3 [6] set onto the notch [5] of the pulleys [3] and [4], slide the wire cover [7] and remove the lift wire /Fr3 [6] from the pulleys [3] and [4].
22. Pull out downward the wire end [8] of the lift wire /Fr3 [6] from the front wire mounting plate /Lt [9], and remove the lift wire /Fr3 [6].
23. Remove the pulley /Fr4 [10] from the shaft. And in the same manner as with Step 21, remove the lift wire /Fr4 [13] from the pulleys [11] and [12].
24. Pull out downward the lift wire /Fr4 [13] from the front wire mounting plate /Rt [14] for removal.

25. Remove the E-ring [1] and then remove the pulley /Rr3 [2] from the shaft.
26. In the same manner as with Step 21, remove the lift wire /Rr3 [5] from the pulleys [3] and [4].
27. In the same manner as with Step 22, remove the lift wire /Rr3 [5] from the rear wire mounting plate / Lt [6].
28. In the same manner as with Step 23, remove the pulley /Rr4 [7] from the shaft and then remove the lift wire /Rr4 [10] from the pulleys [8] and [9].
29. In the same manner as with Step 24, pull out the lift wire /Rr4 [10] from the rear wire mounting plate /Rt [11] for removal.

(2) Procedure for reinstallation

1. For the removal Step 29 to Step 6, reinstall the parts following the removal steps in reverse.
2. Remove the E-ring [1] and then remove the idle gear [2].
3. With a screwdriver inserted into the hole [4] of the remaining paper detection gear [3], set it onto the position of the hole [6] of the paper lift motor mounting plate [5].

Note

- Be sure to position the 2 holes with the paper lift plate at its lower most position.

4. Insert the idle gear [2] into the shaft while taking care that the position of the hole [4] of the remaining paper detection gear [3] does not move, and then reinstall the E-ring [1].
5. For the removal Step 4 to Step 1, reinstall the parts following the removal steps in reverse.

Note

- After installing, carry out the paper lift plate horizontal adjustment. (Refer to [I.13.3 Paper lift plate horizontal adjustment](#))

6.2.8 LU-410 lift wire

Note

- There are 4 kinds of lift wires different in length. And the following wire: /Fr1 [1], /Fr2 [2], /Fr3 [3], / Fr4 [4], and /Rr1 [5], /Rr2 [6], / Rr3 [7], /Rr4 [8], 8 in all, are employed according to the pulleys arranged from inside toward outside. Lift wires of the same length can be used either on the front and rear sides.

Lift wires /Fr1 [1] and /Rr1 [5]: 1057.3mm

Lift wires /Fr2 [2] and /Rr2 [6]: 692.1mm

Lift wires /Fr3 [3] and /Rr3 [7]: 1321.7mm

Lift wires /Fr4 [4] and /Rr4 [8]: 1303.1mm

- When installing the wire, be sure to install the wire end formed of a ball [9] to the wire mounting plate [11] or [12] and the wire end of a cylindrical form [10] to the pulley side.
- For LU-409 and LU-410, the positions on the paper lift plate to which the lift wires /Fr3 [3], /Fr4 [4], /Rr3 [7], /Rr4 [8] are connected are reversed on the right and left sides. Be careful not to mix the right side with the left side. For LU-410, the lift wires /Fr3 [3] and /Rr3 [7] are connected to the right [11] of the paper lift plate and lift wires /Fr4 [4] and /Rr4 [8] are connected to the left [12].

(1) Procedure for removal

⚠ Note:

- Make sure to unplug the power cord of the main body from the power outlet when it is connected to the main body.

Note

- Be sure to press the tray down switch (SW100) while charging to lower the paper lift plate to the bottom before operation.

1. Open the upper door.
2. Remove the LU from the main body.
3. Remove the following door and covers.
 - Upper door (Refer to [G.6.2.2 Upper door](#))
 - Right cover (Refer to [G.6.2.3 Right cover](#))
 - Front cover (Refer to [G.6.2.4 Front cover](#))
 - Rear cover (Refer to [G.6.2.5 Rear cover](#))
4. Remove 3 screws [1] and then remove the clutch cover [2].

5. Remove the E-ring [1] and the bearing [2].
6. Remove 5 screws [3] and remove the gear cover [4].

Note

- When reinstalling it, be sure to check to see if it gets into the mounting plate securely [6] since the shaft to which it is installed is stepped [5].

7. Remove the bearing [1].
8. Remove the idle gear [2].
9. Remove the E-ring [3] and then remove the gear [4] and the pin [5].
10. Remove the E-ring [6] and then remove the gear [7] together with 2 bearings [8] provided on either side of the gear [7].

11. Remove the E-ring [1] and then remove the gear [2] and the pin [3].
12. Remove the E-ring [4] and then remove the bearing [5].

13. Disconnect 5 connectors [1].
14. Remove the wiring [3] from the clamps [2] provided at the 7 positions.
15. Remove 6 screws [4] and then remove the paper lift motor assy [5].

Note

- When reinstalling it, be sure to check to see if it gets into the mounting plate [7] securely since the shaft [6] to which it is installed is stepped.

16. Remove the E-ring [1].
17. Loosen the lift wire /Rr1 [3] by pressing the rear wire mounting plate /Lt [2] downward and slide the wire end [4] in the arrow-marked direction for removal.

Note

- When installing the wire end [4] of the lift wire /Rr1 [3], be sure to mount it into the installation hole provided on the outside of the rear wire mounting plate /Lt [2].

18. Remove the pulley /Rr1 [5] from the shaft and then remove the lift wire /Rr1 [3].

Note

- When installing it, be sure to wind it 6 turns around the pulley /Rr1 [5] so that the lift wire / Rr1 [3] can be pulled out from above the pulley.
- Be careful that the wire does not overlap each other.

19. Press downward the rear wire mounting plate /Rt [6] and slide the wire end [8] of the lift wire /Rr2 [7] in the arrow-marked direction for removal.

Note

- When installing the wire end [8] of the lift wire /Rr2 [7], be sure to mount it into the installation hole provided on the outside of the rear wire mounting plate /Rt [6]. When the wire end [8] will not get into the installation hole provided on the inside, be sure to rewind closely the lift wire /Rr2 [7] that has been wound around the pulley /Rr2 [9] before installing it.

20. Remove the pulley /Rr2 [9] from the shaft and then remove the lift wire /Rr2 [7].

Note

- When installing it, be sure to wind it 6 turns around the pulley /Rr2 [9] so that the lift wire / Rr2 [7] can be pulled out from above the pulley.
- Be careful that the wire does not overlap each other.

21. Remove the E-ring [1].
22. In the same manner as with Step 11 on the rear side, loosen the lift wire /Fr1 [3] by pressing the front wire mounting plate /Lt [2] downward and slide the wire end [4] in the arrow-marked direction for removal.

Note

- When installing the wire end [4] of the lift wire /Fr1 [3], be sure to mount it into the installation hole provided on the outside of the front wire mounting plate /Lt [2].

23. Remove the pulley /Fr1 [5] from the shaft and then remove the lift wire /Fr1 [3].

Note

- When installing it, be sure to wind it 6 turns around the pulley /Fr1 [5] so that the lift wire / Fr1 [3] can be pulled out from above the pulley.
- Be careful that the wire does not overlap each other.

24. Loosen the lift wire /Fr2 [7] by pressing downward the front wire mounting plate /Rt [6] and slide the wire end [8] in the arrow-marked direction for removal.

Note

- When installing the wire end [8] of the lift wire /Fr2 [7], be sure to mount it into the installation hole provided on the inside of the front wire mounting plate /Rt [6]. When the wire end [8] will not get into the installation hole provided on the inside, be sure to rewind closely the lift wire /Fr2 [7]

that has been wound around the pulley /Fr2 [9] before installing it.

25. Remove the pulley /Fr2 [9] from the shaft and then remove the lift wire /Fr2 [7].

Note

- When installing it, be sure to wind it 6 turns around the pulley /Fr2 [9] so that the lift wire / Fr2 [7] can be pulled out from above the pulley.
- Be careful that the wire does not overlap each other.

26. Remove the E-ring [1] and then remove the pulley /Fr3 [2] from the shaft.

27. With the lift wire /Fr3 [6] set onto the notch [5] of the pulleys [3] and [4], slide the wire cover [7] and remove the lift wire /Fr3 [6] from the pulleys [3] and [4].

28. Pull out downward the wire end [8] of the lift wire /Fr3 [6] from the front wire mounting plate /Lt [9], and remove the lift wire /Fr3 [6].

29. Remove the pulley /Fr4 [10] from the shaft. And in the same manner as with Step 27, remove the lift wire /Fr4 [13] from the pulleys [11] and [12].

30. Pull out downward the wire end [8] from the front wire mounting plate /Rt [14], and remove the lift wire /Fr4 [13].

31. Remove the E-ring [1] and then remove the pulley /Rr3 [2] from the shaft.
32. In the same manner as with Step 21, remove the lift wire /Rr3 [5] from the pulleys [3] and [4].
33. In the same manner as with Step 22, remove the lift wire /Rr3 [5] from the rear wire mounting plate / Lt [6].
34. In the same manner as with Step 23, remove the pulley /Rr4 [7] from the shaft and then remove the lift wire /Rr4 [10] from the pulleys [8] and [9].
35. In the same manner as with Step 24, pull out the lift wire /Rr4 [10] from the rear wire mounting plate /Rt [11] for removal.

(2) Procedure for reinstallation

1. For the removal Step 35 to Step 9, reinstall the parts following the removal steps in reverse.
2. With a screwdriver inserted into the hole [2] of the remaining paper detection gear [1], set it onto the position of the hole [4] of the paper lift motor mounting plate [3].

Note

- Be sure to position the 2 holes with the paper lift plate at its lower most position.

3. Insert the idle gear [5] into the shaft while taking care that the position of the hole [2] of the remaining paper detection gear [1] does not move.

Note

- While taking note of the direction in which the idle gear [5] is inserted, check to see if it is engaged securely with the gears [6] and [7].

4. For the removal Step 7 to Step 1, reinstall the parts following the removal steps in reverse.

Note

- After installing, carry out the paper lift plate horizontal adjustment. (Refer to [I.13.3 Paper lift plate horizontal adjustment](#))

7. RH-101

7.1 List of disassembling and assembling parts

No.	Section	Parts name
1	HDD installing unit	HDD installing unit

7.2 Disassembling and assembling procedures

7.2.1 Precautions on disassembling and assembling

- ⚠ CAUTION
- Be sure to unplug the power plug from the power outlet.

7.2.2 HDD installing unit

(1) Procedure

1. Remove 5 screws [1], and remove the rear cover [2] of the HDD installing unit.

2. Disconnect 4 connectors [1].

3. Remove 3 screws [1] and then remove the HDD installing unit [2].
- Note**
- Make sure that the HDD unit [3] is locked, or that the HDD unit [3] is uninstalled.
4. Reinstall the preceding parts following the removal steps in reverse.

**Note**

- Connect the signal wiring harness [1] and the power source wiring harness [2] to M/B side (lower stage) [3].
- Connect the power feed wiring harness [4] and the I/F wiring harness [5] to the printer side (upper stage) [6].
- The wiring harness band [7] is attached to the I/F wiring harness [5] as a mark.
- To make it clear, the picture shows the condition in which the main body rear cover is removed.

8. EF-102

8.1 List of disassembling and assembling parts

The procedure is the same as that of fusing unit of 1250/1250P/1052.

No.	Section	Parts name
1	Fusing section	Fusing temperature sensor /1
2		Fusing temperature sensor /3
3		Thermostat /1, /2
4		Thermostat /3

9. RU-509/HM-102

9.1 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover	Front door
2		Rear cover
3		Upper cover
4	Humidification section (HM-102)	Humidification unit
5		Water feed tank
6	Conveyance section	Color density sensor unit
7		Shutter
8	Others	RU control board (RUCB)

9.2 Disassembling and assembling procedures

9.2.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

9.2.2 Front door

(1) Procedure

1. Open the front door [1], remove the screw [2] and then remove the wire [3].

Note

- When reinstalling, be sure to set so that the wire [3] becomes level.

2. Remove 2 screws [4] and then remove the door support bracket [5] and the front door [1] in the arrow-marked direction.

Note

- The front door [1] is heavy. Support it securely when removing it.

3. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling, check that the front door [1] closes securely.

9.2.3 Rear cover

(1) Procedure

1. Remove the 8 screws [1] and then remove the rear cover [2].
2. Reinstall the above parts following the removal steps in reverse.

9.2.4 Upper cover

(1) Procedure

1. Remove 4 screws [1].
2. Remove 4 screws [2].
3. Remove the upper cover [3].
4. Reinstall the above parts following the removal steps in reverse.

9.2.5 Humidification unit

(1) Procedure

1. Remove the rear cover. (Refer to [G.9.2.3 Rear cover](#))
2. Open the front door [1].
3. Pull out the humidification unit [2].

4. Release 4 clamps [1].

5. Cut off the connection of the pipes [3] and [4] while pressing the brackets [1] and [2].

Note

- Discharge water inside the cut pipe [4] to proper container, otherwise water leaks when cutting off the connection of the pipe [4].

6. Remove 2 connectors [1] from the board.
7. Remove 2 relay connectors [2].
8. Remove the screw [3] and then remove the ground.
9. Remove the screw [4] and then cut off the connecting arm.

10. Remove 4 screws [1] from the right and left rails.
11. Remove the humidification unit [2].

Note

- When removing the humidification unit [2], never hold the parts easily deformed such as Jam clearing lever.
- When reinstalling the humidification unit [2], be sure to fit the groove on the left side of the unit [3] to the rail [4] before putting the entire unit on the rail.

12. Reinstall the above parts following the removal steps in reverse.

**Note**

- When putting down the humidification unit, put a support board or something under it not to damage the clamp [1] or the pipe [2].

9.2.6 Water feed tank**(1) Procedure**

1. Open the front door. (Refer to [G.9.2.2 Front door](#))
2. Remove the rear cover. (Refer to [G.9.2.3 Rear cover](#))
3. Disconnect the connector [1].
4. Release the wiring harness from all clamps [2].

Note

- Be sure to put the removed connector in the water feed tank tray [3].

5. Remove 2 screws [4] and then remove the stopper [5].

6. Pull out the humidification unit and remove 2 pipes. (Refer to [G.9.2.5 Humidification unit](#))
7. Pull out the water feed tank. (Refer to [F.11.3.2 Replacing the water feed filter](#))

Note

- Be sure to put the pipe to the left [1] beforehand so that it does not get stuck inside.

8. Put the humidification unit to the original position.

Note

- Be sure to pull out the water feed tank before putting back the humidification unit so that the pipe does not get stuck inside.

9. Remove 2 screws [2] and then remove the water feed tank [3].

10. Reinstall the above parts following the removal steps in reverse.

Note

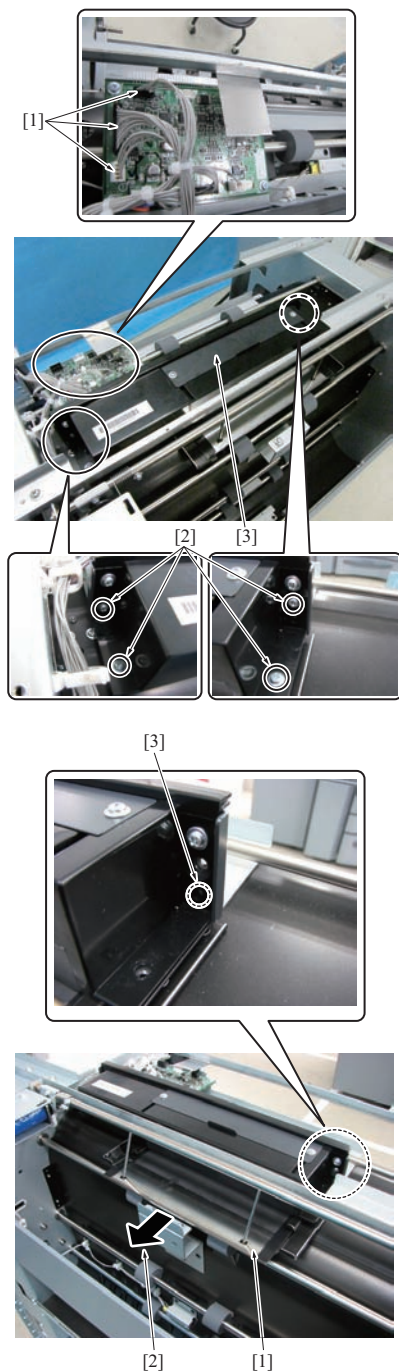

- When reinstalling the water feed tank, be sure to set the positioning [1] hole to the projection of the water feed tank tray.

9.2.7 Color density sensor unit

Note

- When replacing the color density sensor unit, replace the shutter at the same time.

(1) Procedure

1. Remove the upper cover. (Refer to [G.9.2.4 Upper cover](#))
2. Disconnect the 3 connectors [1].
3. Remove 4 screws [2] and then remove the color density sensor unit [3].

4. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling the unit, be sure to set the projection of the mounting plate in the hole [3] of the unit by pressing the color sensor unit while pulling the shutter [1] in the arrow-marked direction [2].

9.2.8 Shutter

(1) Procedure

1. Remove the upper cover. (Refer to [G.9.2.4 Upper cover](#))
2. Loosen 2 screws [1] and then remove the stopper [2].
3. Pull out the shutter [3] in the arrow-marked direction to remove.
4. Reinstall the above parts following the removal steps in reverse.

9.2.9 Note for replacing the board

(1) Procedure

⚠ Note

- When the RU control board (RUCB) is replaced, be sure to replace the EEPROM (IC33).

1. Install EEPROM (IC33) of the old control board [1] to the new control board [2].

Note

- Be sure to install the "A" sections of the EEPROM (IC33) in the same direction.
- After replacing the RU control board (RUCB), conduct rewriting of the firmware. (Refer to [J. Rewriting of firmware](#))

10. RU-510

10.1 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover	Front door
2		Rear cover
3		Left cover
4		Upper cover
5	Others	RU control board (RUCB)

10.2 Disassembling and assembling procedures

10.2.1 Precautions on disassembling and assembling

CAUTION

- Be sure to unplug the power plug from the power outlet.

10.2.2 Front door

(1) Procedure

1. Open the front door [1] and remove the screw [2] and release the wire [3].
2. Remove the 3 screws [4] and then remove the door support bracket [5] and the front door [1].

Note

- The front door [1] is heavy. Support it securely when removing it.

3. Reinstall the preceding parts following the removal steps in reverse.

10.2.3 Rear cover

(1) Procedure

1. Remove 5 screws [1] and then remove the rear cover [2].
2. Reinstall the preceding parts following the removal steps in reverse.

10.2.4 Left cover

(1) Procedure

1. Remove 10 screws [1] and then remove the left cover [2].
2. Reinstall the preceding parts following the removal steps in reverse.

10.2.5 Upper cover

(1) Procedure

1. Remove 4 screws [1].
2. Remove 4 screws [2].
3. Remove the upper cover [3].
4. Reinstall the preceding parts following the removal steps in reverse.

10.2.6 Note for replacing the board

1. When the RU control board (RUCB) is replaced, be sure to replace the EEPROM (IC19). Install EEPROM (IC19) of the old control board [1] to the new control board [2].

a04jf2c017ca

Note

- Be sure to install the "A" sections of the EEPROM (IC19) in the same direction.
- After replacing the RU control board (RUCB), conduct rewriting of the firmware.
(Refer to [J. Rewriting of firmware](#))

11. ZU-608

11.1 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover section	Rear cover
2		Upper cover
3		Front cover
4	Z-folding section	Z-folding/conveyance unit
5	Conveyance section	Punch motor (M604)
6		Registration motor (M601)
7		Main motor cooling fan (FM601)
8		Paper edge sensor board (PESB)
9	Punch section	Punch unit
10		Punch motor (M604)
11		Punch shift motor (M605)
12	Others	ZU control board (ZUCB)

11.2 Disassembling and assembling procedures

11.2.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

11.2.2 Rear cover

- Remove the power code [1].

- Loosen the screw [1], and remove 2 screws [2], and remove the rear cover [3].

- Reinstall the above parts following the removal steps in reverse.

11.2.3 Upper cover

1. Remove 4 screws [1] and then remove the upper cover [2].

2. Reinstall the above parts following the removal steps in reverse.

11.2.4 Front cover

1. Remove 3 screws [1] and then remove the right cover [2].

2. Reinstall the above parts following the removal steps in reverse.

11.2.5 Punch unit

1. Remove the rear cover.

[G.11.2.2 Rear cover](#)

2. Pull out the Z folding/conveyance unit [1].

3. Cut the wiring harness band [1], and disconnect 2 connectors [2].

Note

- When bind the wiring harness band [1], be sure to bind it so that the wiring harness [3] passes the wiring harness band [1] from left to right from the view of the rear.
- Be sure to bind the wiring harness band [1] with sufficient length of the wiring harness [3] when the punch unit move to forward.

4. Remove 4 screws [1], and remove the punch unit [2].

5. Reinstall the above parts following the removal steps in reverse.

11.2.6 Z-folding/conveyance unit

1. Remove the rear cover.

[G.11.2.2 Rear cover](#)

2. Remove the right cover.

[G.11.2.4 Front cover](#)

3. Pull out the Z folding/conveyance unit [1].

4. Cut the wiring harness band [1], and disconnect 2 connectors [2].

Note

- When bind the wiring harness band [1], be sure to bind it so that the wiring harness [3] passes the wiring harness band [1] from left to right from the view of the rear.
- Be sure to bind the wiring harness band [1] with sufficient length of the wiring harness [3] when the punch unit move to forward.

5. Remove 4 screws [1], and remove the punch unit [2].

6. Reinstall the above parts following the removal steps in reverse.

11.2.7 Punch motor (M604)

1. Remove the upper cover.

[G.11.2.3 Upper cover](#)

2. Pull out the Z folding/conveyance unit [1].

3. Disconnect 3 connectors [1] and remove 2 screws [2], and remove the arm [3].

4. Reinstall the Z folding/conveyance unit back again.

5. Remove 4 screws [1], and remove Z-folding/conveyance unit [3] to the front [4] by holding the rails [2] at the both sides.

Note

- When placing the Z-folding/conveyance unit, place it on the flat surface with its top or left side down.
- When reinstalling the Z-folding/conveyance unit, be sure to place the rails on the rail holders [1] at 4 positions.

6. Reinstall the above parts following the removal steps in reverse.

11.2.8 Main motor (M606)

1. Remove the punch unit.

[G.11.2.6 Z-folding/conveyance unit](#)

2. Remove 2 screws [1], and remove the punch motor assy [2].

Note

- When reinstalling the punch motor assy [2], press the punch motor gear [3] to the gear [4]. Be sure to check that the gears rotate smoothly and there is appropriate backlash.

3. Remove 2 screws [1] and disconnect the connector [2], and remove the punch motor assy [3].

4. Reinstall the above parts following the removal steps in reverse.

11.2.9 Registration motor (M601)

1. Remove the upper cover.

[G.11.2.3 Upper cover](#)

2. Remove 4 screws [1], and remove the conveyance upper cover [2].

3. Remove the Z folding/conveyance unit.
[G.11.2.7 Punch motor \(M604\)](#)
4. Remove the screw [1], and remove the conveyance encoder sensor installation board [2].

5. Remove 3 screws [1], and disconnect the connector [2], and remove the harness from 3 wire saddles [3].

6. Remove the screw [1], the slit circular disc [2] and the belt [3], and remove the main motor assy [4].

7. Remove 4 screws [1], and remove the main motor [2].

8. Reinstall the preceding parts following the removal steps in reverse.

11.2.10 Punch shift motor (M605)

1. Disconnect the connector [1], and remove 3 screws [2], and remove the registration motor assy [3].

2. Remove the screw [1].
3. Remove 4 screws [2], and remove the registration motor [3].

4. Reinstall the above parts following the removal steps in reverse.

11.2.11 Main motor cooling fan (FM601)

1. Remove the rear cover.

[G.11.2.2 Rear cover](#)

2. Disconnect 2 connectors [1] and remove 3 screws [2], and remove the punch shift motor assy [3].

3. Disconnect the connector [1] and remove 2 screws [2], and remove the punch shift motor [3].

Note

- When installing the punch shift motor assy, adjust its position so that there is a clearance of "a", as specified below, at the front and rear sides and make sure that the motor assy is horizontal. Adjustment value: "a" = 2 mm

4. Reinstall the preceding parts following the removal steps in reverse.

11.2.12 ZU control board (ZUCB)

1. Remove the rear cover.

[G.11.2.2 Rear cover](#)

2. Remove the upper cover.

[G.11.2.3 Upper cover](#)

3. Disconnect the connector [1], and remove 4 screws [2], and remove the harness from wire saddle [3], and remove the main motor cooling fan assy [4].

4. Remove 2 screws [1], and remove the main motor cooling fan [2].

5. Reinstall the above parts following the removal steps in reverse.

11.2.13 Paper edge sensor board (PESB)

1. Remove the rear cover.

[G.11.2.2 Rear cover](#)

2. Disconnect all 13 connectors from the ZU control board.
3. Remove 7 board supports [1], and remove the ZU control board [2].

4. Reinstall the above parts following the removal steps in reverse.

12. FS-532

12.1 Items not allowed to be disassembled/reassembled

12.1.1 PI paper feed path adjustment screw

(1) Positions from which removing is prohibited

- 1 adjustment screw of the PI paper feed path

[1] Screws not allowed to be removed

-

(2) Reason of prohibition

The installation position of the PI paper feed path is adjusted before shipping.

If the position of the PI paper feed path shifts, the paper that is fed from the PI is likely to be tilted. Therefore, the installation position must not be changed.

12.2 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover	Front door
2		Rear cover
3		Upper cover /Rt1
4		Upper cover /Rt2
5		Upper cover /Fr
6		Upper cover/Rr
7		Upper cover /Md
8		Front cover
9		Sub tray
10	Stacker section	Stacker unit
11	Main tray section	Main tray
12		Main tray up down motor (M11)
13		Main tray up down drive assy

12.3 Disassembling and assembling procedures

12.3.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

12.3.2 Front door

(1) Procedure

1. Open the front door [1].
2. Remove the upper cover /Fr1. (Refer to [G.12.3.6 Upper cover / Fr1](#))
3. Remove the screw [2] and release the wire [3].
4. Remove the screw [4] and then remove the door support bracket [5] and the front door [1].

Note

- The front door [1] is heavy. Support it securely when removing it.
- When installing the front door [1], be sure to set so that the shaft [4] is inserted into the hole [5] of the front door.

5. Reinstall the preceding parts following the removal steps in reverse.

12.3.3 Rear cover

(1) Procedure

1. Remove 5 screws [1].
2. Loosen 2 screws [2] and then remove the rear cover [3] in the arrow-marked direction.
3. Reinstall the above parts following the removal steps in reverse.

12.3.4 Upper cover /Rt1**(1) Procedure**

1. Loosen 2 screws [1].
2. Remove the upper cover /Rt1 [2] in the arrow-marked direction.
3. Reinstall the above parts following the removal steps in reverse.

12.3.5 Upper cover /Rt2**(1) Procedure**

1. Remove 2 screws [1].
2. Open the front door [2], remove 2 screws [3] and then remove the upper cover /Rt2 [4].
3. Reinstall the above parts following the removal steps in reverse.

12.3.6 Upper cover /Fr1

(1) Procedure

1. Remove 3 screws [1] and remove the upper cover /Fr1 [2].
2. Reinstall the preceding parts following the removal steps in reverse.

12.3.7 Upper cover /Fr2

(1) Procedure

1. Remove the upper cover /Fr1. (Refer to [G.12.3.6 Upper cover / Fr1](#))
2. Remove the upper cover /Rt1. (Refer to [G.12.3.4 Upper cover / Rt1](#))
3. Remove the front door. (Refer to [G.12.3.2 Front door](#))
4. Remove 7 screws [1].

5. Disconnect the connector [1] and remove the upper cover /Fr2 [2].
6. Reinstall the preceding parts following the removal steps in reverse.

12.3.8 Upper cover /Rr

(1) Procedure

1. Remove the upper cover /Rt1. (Refer to [G.12.3.4 Upper cover / Rt1](#))
2. Remove 3 screws [1] and then remove the upper cover /Rr [2].
3. Reinstall the above parts following the removal steps in reverse.

12.3.9 Upper cover /Md

(1) Procedure

1. Remove the upper cover /Rt1. (Refer to [G.12.3.4 Upper cover / Rt1](#))
2. Remove the upper cover /Fr2. (Refer to [G.12.3.7 Upper cover / Fr2](#))
3. Remove the upper cover/Rr. (Refer to [G.12.3.8 Upper cover /Rr](#))
4. Remove 2 screws [1] and then remove the upper cover /Md [2].
5. Reinstall the above parts following the removal steps in reverse.

12.3.10 Front cover

(1) Procedure

1. Open the front door [1] and remove the 5 screws [2].

2. Disconnect the connector [1] and remove the front cover [2].
3. Reinstall the preceding parts following the removal steps in reverse.

12.3.11 Sub tray

(1) Procedure

1. Remove the upper cover /Rt1.
2. Remove the upper cover /Fr.
3. Remove the upper cover /Rr.
4. Remove the upper cover /Md.
5. Remove 4 screws [1], and remove the sub tray [2].
6. Reinstall the above parts following the removal steps in reverse.

12.3.12 Stacker unit

(1) Procedure for pulling out the stacker unit

1. By opening the front door and rotating the knob [1], move the FD alignment plate [2] in arrow-marked position [3].

Note

- Be careful that the stacker unit could be locked and not be pulled out if the FD alignment plate [2] is at the arrow-marked position [4].

2. Pull out the stacker unit [5].

(2) Procedure for pulling out the stacker unit

1. Remove the rear cover. (Refer to [G.12.3.3 Rear cover](#))
2. Remove the upper cover/Rr. (Refer to [G.12.3.8 Upper cover /Rr](#))
3. Pull out the stacker unit. (Refer to [G.12.3.12.\(1\) Procedure for pulling out the stacker unit](#))
4. Remove 2 screws [1] and then remove the stopper [2].

5. Remove 4 screws [1] and then disconnect 9 connectors [2].
6. Remove 3 saddles [3] inside the metal frame, and release the wiring harness.
7. Remove the stopper [4] and then pull out the shaft [5] in the arrow-marked direction.

Note

- Fix the connector installation plate and the stacker arm to the back of the stacker unit with tape.

8. Remove 2 screws [1] and then remove the stacker unit [2] from the rail [3].
9. Reinstall the preceding parts following the removal steps in reverse.

12.3.13 Main tray

⚠ Note

- After having lowered the main tray, be sure to unplug the power plug from the power outlet.

(1) Procedure

1. Turn ON the sub power switch (SW2), lower the main tray [1] blocking the light of the main tray upper limit sensor (PS14) [2] during up and down operation of the main tray, and then turn OFF the main power switch (SW1) and the sub power switch (SW2) of the main body.
2. Unplug the power plug of the main body from the power outlet.
3. Remove 4 screws [3] and then remove then main tray [1] in the arrow-marked direction.
4. Reinstall the above parts following the removal steps in reverse.

12.3.14 Main tray up down motor (M11), main tray up-down drive assy

(1) Procedure

⚠ Note

- After having lowered the main tray, be sure to unplug the power plug from the power outlet.

1. Turn ON the sub power switch (SW2), and block the light of the tray upper limit sensor (PS16) [2] during up and down operation of the main tray [1]. Then, lower the main tray until it does not bother the removal of the paper exit cover [3].
2. Turn OFF the sub power switch (SW2) and main power switch (SW1) of the main body.
3. Unplug the power plug of the main body from the power outlet.
4. Remove the rear cover. (Refer to [G.12.3.3 Rear cover](#))

5. Fully pull out the SD unit. (Refer to [G.13.3.4.\(1\) Procedure for fully pulling out the SD unit](#))
6. Disconnect the 2 connectors [2] and remove the screw [1]. Then remove the saddle arm.

7. Disconnect the connector [1].
8. Remove the 2 screws [2], and remove the connector mounting plate [3].
9. Remove the 4 screws [4], and remove the main tray up down motor [5].

10. Remove the screw [1], and remove the main tray cover /Rr [2].
11. Remove the 2 screws [3], and remove the paper exit cover /Rr3 [4].
12. Remove 3 screws [5], and remove the paper exit cover /Rr2 [6].
13. Remove the 5 screws [7], and remove the paper exit cover /Rr1 [8].

14. Remove the 2 screws [1], and then remove the exterior mounting plate /1 [2].

15. Release the wiring harness [1] from the saddle and remove 2 screws [2], and then remove the exterior mounting plate /2 [3].

[1]

16. Remove the spring [1].

[2]

[1]

17. Remove the screw [1], and remove the metal plate [2].

[1]

18. Remove 6 screws [1] and then remove the main tray up-down drive assy [2] in the arrow-marked direction.

Note

- Be sure to remove the main tray up-down drive assy [2] while holding the main tray by hand. If not to do so, the main tray drops off.

19. Reinstall the preceding parts following the removal steps in reverse.

[2]

[1]

[1]

[1]

13. SD-510

13.1 Items not allowed to be disassembled/reassembled

13.1.1 Folding knife/1

(1) Positions from which removing is prohibited

- 6 attaching screws of the folding knife /1

[1]	Screws not allowed to be removed	[2]	Folding knife assy /1
[3]	Folding knife /1	-	

(2) Reason of prohibition

The install position of the folding knife /1 is adjusted during the production process, and if disassembled, its accuracy is not guaranteed. Therefore, removing screws that leads the disassembly of the folding knife /1 is not allowed.

13.1.2 Folding knife/2

(1) Positions from which removing is prohibited

- 2 attaching screws of the folding knife /2

[1]	Screws not allowed to be removed	[2]	Folding knife assy /2
[3]	Folding knife /2	-	

(2) Reason of prohibition

The install position of the folding knife /2 is adjusted during the production process, and if disassembled, its accuracy is not guaranteed. Therefore, removing screws that leads the disassembly of the folding knife /2 is not allowed.

13.2 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover	Front cover
2		Stapler unit cover
3	SD unit	SD unit
4	Folding section	Folding knife assy /1

13.3 Disassembling and assembling procedures

13.3.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

13.3.2 Front cover

(1) Procedure

1. Remove 5 screws [1] and then remove the front cover [2].
2. Reinstall the above parts following the removal steps in reverse.

13.3.3 Stapler unit cover

(1) Procedure

1. Pull out the SD unit. (Refer to [G.13.3.4 SD unit](#))
2. Remove 3 screws [1].
3. Release 2 claws [2] from the 2 holes [3], and remove the staple unit cover [4].
4. Reinstall the preceding parts following the removal steps in reverse.

13.3.4 SD unit

(1) Procedure for fully pulling out the SD unit

1. Open the front door [1].
2. Remove the screw [2] and release the wire [3]

3. Pull out the SD unit [1].
4. Remove the screw [2], and then remove the SD support stay /Lt1 [3].
5. Remove the screw [4], and then remove the SD support stay /Rt [5].
6. Remove the screw [6] to remove the 2 connectors [7], and then remove the SD arm [8].

[1][2] [4] [3] [1][2]

[1] [2]

7. Insert the projection of the SD support stay/Rt [1] into the hole of the SD unit [2].
8. Install the SD support stay /Rt [4] using the screw [3] removed in step 4.

9. Insert the projection of the SD support stay/Lt1 [1] into the hole of the SD unit [2].
10. Install the SD support stay /Lt1 [4] using the screw [3] removed in step 3.

Note

- When installing the SD support stay /Lt1, be sure to set the projection [5] to the hole [6] of the SD support stay / Lt1.
- Please note that the deformation of the rail may occur or that the SD unit may fall down if the SD unit is removed without the SD support stay installed. When pulling out the SD unit, be sure to install the SD support stay.

11. Remove the stopper screw [7], and then remove the SD unit.

Note

- When pulling out the SD unit, lift the SD unit upward slightly.

12. Remove the screw [1], and then remove the SD support stay /Lt2 [2].

13. Insert the projection of the SD support stay/Lt2 [1] into the hole of the SD unit [2].

14. Install the SD support stay /Lt2 [4] using the screw [3] removed in step 11.

Note

- When installing the SD support stay /Lt2, be sure to set the projection [5] to the hole [6] of the SD support stay / Lt2.

(2) Procedure for removing the SD unit

1. Fully pull out the SD unit. (Refer to [G.13.3.4.\(1\) Procedure for fully pulling out the SD unit](#))
2. Remove the front cover of FS. (Refer to [G.12.3.10 Front cover](#))
3. Remove the screw [1].
4. Hold 2 handles [2] and then remove the SD unit [3] in the arrow-marked direction.

Note

- When reinstalling the SD unit, be sure to set the mark [4] of the SD unit to the metal frame [6] of the rail [5].

**Note**

- When reinstalling the SD unit, be sure to set the rail [1] of the SD unit on the rail [2] of the finisher.

13.3.5 Folding knife assy /1

(1) Procedure

1. Remove the SD unit. (Refer to [G.13.3.4.\(2\) Procedure for removing the SD unit](#))
2. Remove the front cover. (Refer to [G.13.3.2 Front cover](#))
3. Remove the stapler unit cover. (Refer to [G.13.3.3 Stapler unit cover](#))
4. Rotate the folding knife drive shaft [1] to adjust the position of the clunk arm assy [2].
5. Remove the screw [3], 1 each, release the crank arm assy [2], and remove the bearing [4], 1 each.
6. Remove the folding knife drive shaft [1] in the arrow-marked direction.

Note

- When installing the clunk arm assy [1], be sure to install it so that the clunk arm [2] faces [3] the opposite direction [5] to the actuator [4].
- When installing the clunk arm assy [1], be sure to install the screw [7], 1 each, to prevent the clunk arm [2] from coming off from the folding knife drive shaft [6].
- When installing the clunk arm assy [1], be careful that the leading edge of the folding knife assy /1 does not bend by contacting with the 1st folding roller.

7. Remove each E-rings [1], and remove each crank arm assy [2], the bearings [3], 2 each, and each collar [4].

8. Remove the folding knife assy /1 [1] in the arrow-marked direction [2].
 9. Remove 2 screws [3] and then remove the assy stay /Fr [4] in the arrow-marked direction [6].
 10. Disconnect the collar [5].

Note

- When removing the assy stay /Fr, be careful not to drop the collar [5].

11. By lifting the conveyance guide plate [1], remove the folding knife assy/1 [2] in the arrow-marked direction.

Note

- When removing the folding knife assy /1 [2], be careful not to drop the collar [3].

12. Disconnect the collar [1].
13. Remove 2 screws [2] and then remove the assy stay /Rr [3] in the arrow-marked direction.
14. Reinstall the preceding parts following the removal steps in reverse.

13.3.6 Folding knife assy /2

(1) Procedure

1. Remove the SD unit. (Refer to [G.13.3.4 SD unit](#))
2. Remove the front cover. (Refer to [G.13.3.2 Front cover](#))
3. Remove the SD support stay /Rt and tilt the SD unit [1] in the arrow-marked direction. (Refer to [G.13.3.4 SD unit](#))
4. Remove the SD support stay /Lt. (Refer to [G.13.3.4 SD unit](#))

5. Remove 2 screws [1] and then remove the paper exit guide /1 [2].
6. Disconnect the connector [3], and release the wiring harness.
7. Remove the screw [4] and then remove the cover [5].
8. Release the springs /1 [6] and /2 [7].
9. Remove the C-clip [8] and pull out the shaft [9] in the arrow-marked direction, and then remove the springs /1 [6] and /2 [7] and the paper exit guide /2 [10].

10. Remove each spring [1] and then remove each C-clip [2].
11. Slide the bearings [3], 2 each, to the inside, and remove the paper exit driven roller [4].

12. Remove the C-clip [1] and remove the bearing [2].
13. Remove the C-clip [3] and the belt holding material [4], and remove the belt [7] from the pulley [5] and the paper exit drive gear [6].
14. Remove the pulley [5] and the bearing [8], and remove the paper exit roller [9].

15. Mark [2] the mounting position of the folding knife assy /2 mounting plate [1] with a pencil or something.
16. Remove 4 screws [3] and then remove the folding guide [4].
17. Remove the screw [5], and remove the paper exit guide lock part [6].

18. Disconnect the connector [1] to release the wiring harness, remove 5 screws [2] and 1 screw [3], and remove the folding knife assy /2 mounting plate [4].

Note

- When installing the folding knife assy /2 mounting plate [4], be sure to install it according to the mark [5] that has been marked in the step 16.
The 2nd folding misalignment occurs if the mounting plate is mis-placed.

19. Remove the folding knife assy /2 [6] in the arrow-marked direction.

[1]

20. Reinstall the preceding parts following the removal steps in reverse.

Note

- When installing the folding knife assy /2, be sure not to grab the blade [1] or not to hit it against other parts. It could lead to the skew or damage of the blade.

14. PK-522

14.1 List of disassembling and assembling parts

No.	Section	Parts name
1	Punch unit	Punch unit

14.2 Disassembling and assembling procedures

14.2.1 Precautions on disassembling and assembling

- ⚠ CAUTION
- Be sure to unplug the power plug from the power outlet.

14.2.2 Punch unit

(1) Procedure

1. Remove the punch waste box [1].

2. Remove the screw [1], and remove the shooter [2] in the arrow-marked direction.

3. Remove the rear cover of FS-532. (Refer to [G.12.3.3 Rear cover](#))
4. Remove the connector from the punch drive board (PDB) [1] to release the wiring harness, and then remove the relay connector [2].

5. Remove 3 screws [1] and then remove the punch unit cover [2].

6. Disconnect the 2 connectors [1] and remove the clamp to release the wiring harness.
7. Remove 6 screws [2], and remove the punch unit [3].

Note

- **When removing the punch unit, be careful not to damage the conductive PET [4].**

8. Reinstall the preceding parts following the removal steps in reverse.
9. After reinstalling the punch unit, conduct the following items in order.

Punch unit mounting position adjustment

(Refer to [I.19.2 Punch unit adjustment mounting position adjustment](#))

15. PI-502

15.1 List of disassembling and assembling parts

No.	Section	Parts name

3		Operation panel cover

15.2 Disassembling and assembling procedures

15.2.1 Precautions on disassembling and assembling

- ⚠ CAUTION
- Be sure to unplug the power plug from the power outlet.

15.2.2 Upper cover

(1) Procedure

1. Remove the cap [2] of the upper cover [1].
2. Remove 4 screws [3] and then remove upper cover [1].
3. Reinstall the above parts following the removal steps in reverse.

15.2.3 Rear cover

(1) Procedure

1. Remove the upper cover. (Refer to [G.15.2.2 Upper cover](#))
2. Remove the screw [1] and then remove the connector cover [2].
3. Remove 3 screws [3] and then remove the rear cover [4].
4. Reinstall the above parts following the removal steps in reverse.

15.2.4 Operation panel cover

(1) Procedure

1. Remove the upper cover. (Refer to [G.15.2.2 Upper cover](#))
2. Remove 2 screws [1] and the relay connector [2], and then remove the operation panel assy [3].
3. Reinstall the above parts following the removal steps in reverse.

15.2.5 PI unit

(1) Procedure

1. Remove the screw [1] and remove the connector cover [2].

2. Remove the connector [1] and remove the spring [2].

3. Open the front door of FS and remove the 2 screws [1].

4. Move the PI unit [1] in the arrow-marked direction, release 2 locks [2] of the positioning screw, and remove the PI unit [1].
5. Reinstall the preceding parts following the removal steps in reverse.

- ⚠CAUTION
- Be sure to unplug the power plug from the power outlet.

16.2.2 Cover

(1) Procedure

1. Remove 4 screws [1] and then remove the rear cover /Up [2].
2. Remove 6 screws [3] and then remove the rear cover /Lw [4].
3. Remove 7 screws [5] and then remove the left cover [6].

ls502fs2035c

4. Remove 5 screws [1] and move the front cover /Up [2] to the upper side.
5. Disconnect the connector [3] and remove the front cover /Up [2].

ls502fs2036c

6. Remove the screws [1], 1 each, and then remove 3 knobs [2].
7. Loosen 2 screws [3].
8. Remove 2 screws [4] and then remove the front cover /Lw [5].

ls502fs2037c

9. Remove 3 screws [1] and then remove upper cover [2].

10. Open the front door [1].
11. Remove 2 screws [2] and then remove the front door [1].
12. Reinstall the above parts following the removal steps in reverse.

16.2.3 Replacing the stacker tray up/down wire

Note

- When conducting this operation, be sure to set the stacker tray at the home position (the upper most position) in advance.

(1) Procedure

1. Remove the rear covers /Up and /Lw. (Refer to [G.16.2.2 Cover](#))
2. Disconnect 2 connectors [1].
3. Remove 2 screws [2] and remove the sensor mounting plate [3].
4. Remove 4 screws [4] and remove the stacker tray up down motor (M1) [5].

5. Check point when reinstalling the stacker tray up down motor (M1)
- Note**
- When reinstalling the stacker tray up down motor (M1), be sure to check that the belt [2] has been engaged with the gear [1], and then engage it with the gear [3] before fastening the stacker tray up down motor (M1) [4].
 - When the belt [2] is not horizontally attached between the gear [1] and the gear [3], make adjustments by rotating the encoder [5] counterclockwise.

ls502fs2003c

6. Remove 2 screws [1] and remove the motor mounting plate [3] from the stacker tray up down motor (M1) [2].

7. Remove the screws [1], 1 each, and remove the pulley covers [2], 1 each.

ls501f2c001a

8. Remove the screws [1], 1 each, and remove the pulley covers [2], 1 each.

ls501f2c002a

Is501f2c003a

Is502fs2027c

Is501f2c004a

Is502fs2028c

9. Remove the screw [1] and remove the wire retaining bracket [2].
10. Remove 4 screws [3] and remove the pulley assy [4].
11. Remove the hexagon socket screw [6] and remove the tip [7] of the wire /1 [5].

Note

- On the paper exit side, loosen 4 screws [3], bring down the pulley assy [4] and release the tension of the wire /2 [5] before starting the operation.
- When reinstalling it, the positions of the pulley assy on the paper feed side and the paper exit side become important. Be sure to check the marked position in advance of the pulley assy on the paper exit side.

12. Release the winding of the wire /1 [2] from the pulley [1].
13. Remove the E-ring [3] and then remove the pulley [1] from the shaft [4].

14. Remove the wire retaining bracket [2] from the wire /1 [1].

Note

- When installing the wire retaining bracket [2], install it to the wire /1 [1] so that the bracket comes to the rear side.

15. Remove the wire /1 [2] from the pulley [1].
16. Reinstall a new wire /1 following the preceding steps 6 to 12 in reverse.

17. Check point 1 when reinstalling the wire

Note

- When 2 wires at both sides are removed at the same time, the stacker tray comes down. So, be sure to replace the wires one at a time (The remaining wire holds the stacker tray in place.)
- When attaching the pulley to the shaft, be sure to align the groove [1] of the pulley with the pin [2] that has been inserted into the shaft.
- Be sure to set up it with the bead set portion [3].

18. Check point 2 when reinstalling the wire

Note

- When winding the wire around the pulley, be sure to wind it 8 turns [3] so that the direction of drawing-out [1] comes to the rear panel side [2].
- The direction of drawing-out of the wire /1 is symmetrical to that of the wire /2.

19. Check point 3 when reinstalling the wire

Note

- When fixing the pulley assy [1] on the paper exit side, be sure to fix it at the same position as it was removed from.

20. Replace the wire /2 with a new one following the preceding steps 6 to 13.

21. Reinstall other parts following the steps 1 to 6 in reverse.

16.2.4 Caution when setting models using toggle SW**⚠ CAUTION**

When using C6501/C6501P/C65hc/1200/1200P/1051/C8000/C7000/C7000P/C70hc/C6000, be sure to set the toggle switch on the connector connection of the left side of the LS to SYS2 [1].

17. FD-503

17.1 Items not allowed to be disassembled/reassembled

17.1.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

17.1.2 Folding/conveyance switching position adjustment section

Note

- Be sure to avoid removing or loosening the screws [1], [2], and [3] of the folding/conveyance switching position adjustment section provided on the front of the folding conveyance unit. The adjustment scale marked on the folding conveyance frame are used in the factory.

fd501fs2079c

17	PI section	Way to distinguish between new and old types of the multi feed detection board /1, /2
18		Multi feed detection board /1, /2 (new type)
19		Multi feed detection board /1, /2 (old type)

17.3 Disassembling and assembling procedures

17.3.1 Upper cover /Fr + PI cover /Fr

(1) Procedure

1. Open the upper door [1] and the front door [2].
2. Remove 3 screws [3], pull out the PI cover /Fr [5] to the front side while raising it together with the upper cover /Fr [4].

3. Disconnect the connector [1] and remove the PI cover /Fr [3] together with the upper cover /Fr [2].

17.3.2 Upper cover /Rr + PI cover /Rr

(1) Procedure

1. Open the upper door [1].
2. Remove 3 screws [2] and pull out the PI cover /Rr [4] to the rear side while raising it together with the upper cover /Rr [3].

17.3.3 Upper door**(1) Procedure**

fd501fs2032c

1. Remove the upper cover /Fr, the PI cover /Fr, the upper cover /Rr and the PI cover /Rr.
2. Close the upper door [1].
3. Remove the E-ring [2] and then remove the bearing [4] of the upper door open/close shaft [3].
4. With the bearing [5] shifted to the front side, remove the upper door [1].

17.3.4 Rear cover**(1) Procedure**

fd501fs2033c

1. Remove 4 screws [1] and then remove the rear cover /Lw [2].

17.3.5 Left cover /Fr**(1) Procedure**

fd501fs2034c

1. Remove 3 screws [1] and then remove the left cover /Fr [2].

17.3.6 Left cover /Rr

(1) Procedure

1. Remove 5 screws [1] and then remove the left cover /Rr [2].

17.3.7 Paper exit stopper cover

(1) Procedure

1. Remove 4 screws [1] and then remove the paper exit stopper cover [2].

17.3.8 Right cover

(1) Procedure

1. Remove 4 screws [1] and then remove the right cover [2].

17.3.9 Left cover /Up

(1) Procedure

fd501fs2038c

1. Remove the upper cover /Fr, the PI cover /Fr, the upper cover /Rr and the PI cover /Rr.
2. Remove 4 screws [1] and then remove the left cover /Up [2].

17.3.10 Mount cover

(1) Procedure

fd501fs2039c

1. Open the front door [1].
2. Remove 3 screws [2] of the handle and then remove the handle.
3. Remove 4 screws [3] and then remove the mount cover [4].

17.3.11 Front door

Note

- When removing the front door, be sure to support it so that it does not fall down.

(1) Procedure

1. Open the front door [1].
2. Remove the screws [2].
3. Remove the mount cover [3].
4. Remove 3 screws [4] while pushing up the front door so that it does not fall down, and then remove the support plate [5].
5. Remove the front door [1].

17.3.12 Cleaning the 2nd folding conveyance sensor (PS53)**(1) Procedure**

1. Remove the front door and pull out the folding unit. (Refer to [G. 17.3.11 Front door](#))
2. Open the guide plates [1] and [2].
3. Clean the 2nd folding conveyance sensor (PS53) [3].

17.3.13 Cleaning the 3rd folding conveyance sensor (PS54)

(1) Procedure

fd501fs2042c

1. Remove the front door and pull out the folding unit. (Refer to [G. 17.3.11 Front door](#))
2. Remove the screw [1] and turn over the sensor mounting plate [2].

fd501fs2043c

3. Clean the 3rd folding conveyance sensor (PS54) [1].

17.3.14 Cleaning the 3rd folding roller

(1) Procedure

fd501fs2044c

1. Open the front door and pull out the folding unit. (Refer to [G. 17.3.11 Front door](#))
2. Remove the stand cover. (Refer to [G. 17.3.10 Mount cover](#))
3. The 2 springs [2] are hooked to the shaft [1]. Remove them from the shaft [1].
4. Remove the screw [3] and then remove 2 springs [2], the support plate [4] and the guide plate [5].

fd501fs2045c

5. Remove 3 screws [1] and then remove the guide plate [2].

fd501fs2046c

6. Clean the 3rd folding roller [1].

17.3.15 Folding conveyance section

⚠ CAUTION

- The folding conveyance section is heavy. Be sure to conduct this operation with 2 people.

(1) Procedure

fd501fs2047c

1. Remove the front door and the rear cover.
2. Disconnect 3 connectors [1] and then remove the wiring harnesses from the 7 wiring harness guides [3] of the coupling arm /Rr [2].

fd501fs2048c

3. Remove 2 C-clips [1].
4. Remove the shaft [2] and separate the coupling arm /Fr [3] and the coupling arm /Rr [4].

5. Remove the stopper screws [1], 1 each, from the left and right rails and pull further out the folding conveyance section.

6. Remove screws [1], 3 each, from the left and right rails.

fd501fs2051c

fd501fs2052c

fd501fs2053c

7. Hold the folding conveyance section [3] at the specified places [1] and [2] and remove it while lifting it up.

CAUTION

- Be careful of your posture when removing it. Be sure to conduct this operation with 2 people so that you do not suffer backache.

Note

- When lifting up the folding conveyance section, be sure to hold the shaft at the places [1] and [2]. Holding it at other places such as the roller shaft or the guide plate may cause deformation to these places.

8. Stand the folding conveyance section [1] upright when it has been removed, or lay it down on the right-side [2].

Note

- Be careful not to lay it with the left side [3] down. The guide plate may get deformed.

9. Check point when reinstalling the folding conveyance section

Note

- When installing the folding conveyance section, make sure that all 4 hooks [1] of the rails have engaged the attaching holes [2] of the folding conveyance section.
- The top should be attached by pushing it to the right to engage the upper rail and the bottom pushed to the left to engage the lower rail.

10. Reinstall the above parts following the removal steps in reverse.

Note

- When installing the folding conveyance section, pull out the rail further than the length of the stopper [1]. Use the stopper screw [2] to fasten it tentatively at its fully pulled-out position and fix the rail on the opposite side with tape [3]. It prevents the rail from moving to inside for an easy and smooth operation.

17.3.16 Main tray up/down wire

(1) Procedure

1. Check point when removing/reinstalling the main tray up/down wire.

Note

- The following procedure for replacing the up/down wire shows the examples on the rear side. The figuration and the winding of wires on the front side are symmetrical to those on the rear side.
- There are 2 types of up/down wires provided, one [1] on the front side and the other [3] on the rear side. Be sure to use the wire with the correct wire mounting plate direction when installing it. The direction of the wire mounting plate distinguished between these 2 wires when the shorter wire [2] is placed under the longer wire.

2. Remove the following parts.

Rear cover (Refer to [G.17.3.4 Rear cover](#))

Left cover /Fr (Refer to [G.17.3.5 Left cover /Fr](#))

Left cover /Rr (Refer to [G.17.3.6 Left cover /Rr](#))

Front door (Refer to [G.17.3.11 Front door](#))

fd501fs2057c

3. Remove 2 connectors [1] and 5 screws [2], and then remove the gear box [4] together with the up/down motor (M11) [3].

CAUTION

- When the gear box is removed, the up/down stay may fall down. So, when removing the gear box, be sure to support the stay with your hands.

fd501fs2058c

4. Remove 2 screws [1] and then remove the wire mounting plate [3] of the up/down wire /Rr [2] from the up/down stay [4].

fd501fs2059c

5. Remove the E-ring [1] and then remove the gear [3] together with the 2 bearings [2].
6. Remove the E-ring [4] and then remove the gear [6] together with the 2 bearings [5].
7. Remove the E-ring [7] and then remove the gear [8] and the pin [9].

Note

- When removing the gear [8], be careful not to drop the pin [9].

fd501fs2060c

8. Loosen 3 screws [2] of the belt tensioner [1].

fd501fs2061c

9. Remove the E-ring [1] and then remove the up/down pulley /RrLw [2] and the pin [3].

Note

- When removing the up/down pulley /RrLw [2], be careful not to drop the pin [3].

fd501fs2062c

10. Temporarily tighten the wire mounting plate [2] of a new up/down wire /Rr [1] to the up/down stay [3] with 2 screws [4].

Note

- Install the up/down wires placing the shorter wire below the longer one with the wire supporting part of the mounting plate outside.
- There are 2 types of up/down wires, one for the front side and the other for the rear side, but these 2 wires are different in the direction of the wire mounting plates. Be sure to use a wire that fits in with the direction of a wire mounting plate.

fd501fs2063c

11. Fasten the new up/down wire /Rr [1] with the wire end [3] provided on the inside of the up/down pulley /RrLw [2] and insert it into the shaft [6]. Rotate the up/down pulley /RrLw [2] and wind it 5.5 turns clockwise from inside to outside around the up/down pulley with no slack, and then insert the up/down pulley /RrLw [2] fully onto the shaft so that it coincides with the pin [4] and fasten it with the E-ring [5]. If the angle does not coincide with the pin [4], move up and down the front side of the up/down tray to change the angle of the shaft [6].

fd501fs2063c

12. Hook up the up/down wire /Rr [1] onto the up/down pulley /RrUp [3] through the relay pulley /Rr [2].

13. Wind the up/down wire /Rr [1] 2 turns counterclockwise from inside to outside around the up/down pulley /RrLw [2] with no slack and fasten it with the wire end [3].

14. The route along which the up/down wire /Rr passes
The route along which the up/down wire /Rr passes is, on the whole, as shown in the drawing left.

fd501fs2067c

15. Use a tension gauge or spring balance to pull up the wire tensioner [1] upward with a designated force "A," and fasten it with the 3 screws [2].

Specified value: $A = 2.5\text{kg} \pm 0.25\text{kg}$

fd501fs2068c

16. Reinstall the 3 gears [1] following the removal steps in reverse.

fd501fs2069c

17. With the up/down stay [1] held in a horizontal position, tighten the 2 screws [3] of the wire mounting plate [2].

Note

- Move the up/down stay up and down and check to see if it moves smoothly. If it does not move smoothly, adjust it again so that it becomes horizontal.
- Check the up/down wire [4] if it gets behind the actuator plate [5]. If it gets behind the douser, an unnecessary load is applied to the up/down wire [4] when the up/down stay [1] goes up.

18. Reinstall the above parts following the removal steps in reverse.

17.3.17 Way to distinguish between new and old types of the multi feed detection board /1 (MFDB/1) and /2 (MFDB/2)

Note

- Both of the multi feed detection boards /1 (MFDB/2) and /2 (MFDB/2) have new type [1] and old type [2].
- Each of the new and old types of the multi feed detection board /1 (MFDB/1) and /2 (MFDB/2) has different mounting metal frames and PI drive boards (PIDB) that correspond to each detection board, and are incompatible.

[1]

[2]

17.3.18 Multi feed detection board /1 (MFDB/1) and /2 (MFDB/2) (new type)

Note

- When the multi feed detection board is replaced, be sure to conduct the adjustment in replacing multi feed detection board (PI). (Refer to [I.5.6.9 Adjustment when replacing the multi feed detection board \(PI\) \(new type\)](#))

(1) Procedure

[2] [1]

fd501fs2070c

- Remove 2 screws [1] and then remove the multi feed detection board /1 (MFDB/1) cover [2].

[3] [2] [1]

- Disconnect the connector [1].
- Remove 2 screws [2] and then remove the multi feed detection board /1 (MFDB/1) [3].

[1]

fd501fs2072c

[2]

[1]

[3]

fd501fs2074c

[3]

[2]

[1]

4. Open the front door and then open the conveyance guide plate /2 [1] in the upper right direction.

5. Remove 4 screws [1].
6. Remove the wiring harness of the multi feed detection board /1 (MFDB/1) from the wiring harness guide [2].

7. Turn around the conveyance guide plate /2 assy [1] inside the machine and pull it to the outside.
8. Remove 2 screws [2] and then remove the multi feed detection board /2 cover [3].

Note

- When turning it around, or when disassembling or reassembling it, be careful not to damage the wiring harness.

9. Disconnect the connector [1].
10. Remove 2 screws [2] and then remove the multi feed detection board /2 (MFDB/2) [3].
11. Reinstall the above parts following the removal steps in reverse.

(2) Note for installing the multi feed detection boards /1 (MFDB/1) and /2 (MFDB/2)

- Multi feed detection board /1 (MFDB/1) [1] and /2 (MFDB/2) [2] are different in shape. When reinstalling them, be sure to set at the proper positions.

**17.3.19 Multi feed detection board /1 (MFDB/1) and /2 (MFDB/2) (old type)****Note**

- When replacing the multi-feed detection board /1 (MFDB/1), be sure to replace the multi-feed detection board /2 (MFDB/2) at the same time.
- When the multi-feed detection board is replaced, be sure to conduct the adjustment in replacing multi-feed detection board (PI). (Refer to [I.5.6.10 Adjustment when replacing the multi feed detection board \(PI\) \(old type\)](#))

(1) Procedure

fd501fs2070c

- Remove 2 screws [1] and then remove the multi-feed detection board /1 (MFDB/1) cover [2].

fd501fs2071c

- Disconnect the connector [1].
- Remove 2 screws [2] and then remove the multi-feed detection board /1 (MFDB/1) [3].

fd501fs2072c

- Open the front door and then open the conveyance guide plate /2 [1] in the upper right direction.

[2] fd501fs2073c

[1] [3] fd501fs2074c

[3] [2] [1] a0h0t3c007ca

5. Remove 4 screws [1].
6. Remove the wiring harness of the multi-feed detection board /1 (MFDB/1) from the wiring harness guide [2].

7. Turn around the conveyance guide plate /2 Assy [1] inside the machine and pull it to the outside.
8. Remove 2 screws [2] and then remove the multi-feed detection board /2 cover [3].

Note

- When turning it around, or when disassembling or reassembling it, be careful not to damage the wiring harness.

9. Disconnect the connector [1].
10. Remove 2 screws [2] and then remove the multi-feed detection board /2 (MFDB/2) [3].
11. Reinstall the above parts following the removal steps in reverse.

(2) Note for installing the multi-feed detection boards /1 (MFDB/1) and /2 (MFDB/2)

[1] fd501fs2076c

- The multi-feed detection boards /1 (MFDB/1) and /2 (MFDB/2) are installed on the same type board. Be careful not to confuse one with the other when installing them.
- Be sure to confirm the marking on the board when installing it.
Multi-feed detection board /1 (MFDB/1) [1]: 15AG
Multi-feed detection board /2 (MFDB/2) [2]: 56UA
- The connector shape is different for the multi-feed detection boards /1 (MFDB/1) and /2 (MFDB/2). So, even if it is installed, the connector cannot be connected.

17.3.20 Note for replacing the board**Note**

- When the FD control board (FDCB) is replaced, be sure to replace the EEPROM (IC68).

fd501fs2077c

fd501fs2078c

1. Install EEPROM (IC68) of the old control board [1] to the new control board [2].

Note

- Be sure to set the SW3 [3] same as the old FDCB. (Refer to [L.2.12.1 PI drive board \(PIDB\)](#))

2. Check point when reinstalling the EEPROM (IC68)

Note

- Be sure to install the "A" sections of the EEPROM (IC68) in the same direction.

After replacing the FD control board (FDCB), conduct rewriting of the firmware.

(Refer to [J. Rewriting of firmware](#))

18. SD-506

18.1 Items not allowed to be disassembled/reassembled

18.1.1 Trimmer blade home sensor (PS50), Trimmer blade upper limit sensor (PS51)

(1) Positions from which removing is prohibited

- 1 fixing screw of the mounting plate on each trimmer blade home sensor (PS50) and trimmer blade upper limit sensor (PS51)

a0h2t3c061ca

[1]	Screw not allowed to be adjusted/removed	[2]	Mounting plate
[3]	Trimmer blade upper limit sensor (PS51)	[4]	Screw not allowed to be adjusted/removed
[5]	Mounting plate	[6]	Trimmer blade home sensor (PS50)

(2) Reason of prohibition

- The trimmer blade home sensor (PS50) detects the home position of the trimmer blade. Once the home position is out of alignment, the trimmer blade gets out from the trimmer press plate. It prevents paper from entering to the trimmer section and causes the trimming error or damages the trimmer blade retaining plate. Therefore, be sure not to change the installation position of PS50.
- The trimmer blade upper limit sensor (PS51) detects the upper limit of the trimmer blade after the completion of the trimming. Once the upper limit detection is out of alignment, the paper fails to be trimmed because the trimmer blade stops before the completion or the trimmer blade and the trimmer board get damaged because the trimmer blade cuts in the trimmer board deeply. Therefore, be sure not to change the installation position of PS51.

18.1.2 Trimmer completion sensor (PS62)

(1) Positions from which removing is prohibited

- 1 fixing screw of the trimmer completion sensor (PS62) mounting plate

a0h2t3c062ca

[1]	Mounting plate	[2]	Screw not allowed to be adjusted/removed
[3]	Trimmer completion sensor (PS62)	-	

(2) Reason of prohibition

- The trimmer completion sensor (PS62) detects the completion of the trimming. Once the trimmer completion timing is out of alignment, the paper fails to be trimmed or the trimmer blade and the trimmer board get damaged because the trimmer blade cuts in the trimmer board deeply. Therefore, be sure not to change the installation position of PS50.

18.1.3 Wire slack prevention sensor (PS66)

(1) Positions from which removing is prohibited

- 1 fixing screw of the wire slack prevention sensor (PS66) mounting plate

(a) Previous trimmer unit

[1]	Mounting plate	[2]	Screw not allowed to be adjusted/removed
[3]	Wire slack prevention sensor (PS66)	-	

(b) New trimmer unit

[1]	Wire slack prevention sensor (PS66)	[2]	Mounting plate
[3]	Screw not allowed to be adjusted/removed	-	

(2) Reason of prohibition

- The wire slack prevention sensor (PS66) detects the slack of the winding wire on the trimmer blade. Once the detection position is out of alignment, the wire is removed from the winding pulley and damages the trimmer unit. Therefore, be sure not to change the installation position of PS66.

18.1.4 Trimmer press upper limit sensor (PS52), Trimmer press home sensor (PS53)

(1) Positions from which removing is prohibited

- 1 fixing screw of the trimmer press upper limit sensor (PS52) mounting plate
- 1 fixing screw of the trimmer press home sensor (PS53) actuator

[1]	Screw not allowed to be adjusted/removed	[2]	Actuator
[3]	Trimmer press home sensor (PS53)	[4]	Trimmer press upper limit sensor (PS52)

[5] Screw not allowed to be adjusted/removed	[6] Mounting plate
--	--------------------

(2) Reason of prohibition

- The trimmer press home sensor (PS53) detects the home position of the trimmer press plate. Once the home position is out of alignment, the opening is not opened enough for the paper. It causes the trimming error by preventing paper from entering to the trimming section. Therefore, be sure not to change the position of the actuator of PS53.
- The trimmer press upper limit sensor (PS52) detects the upper limit of the trimmer press. Once the upper limit position is out of alignment, the opening is not opened enough for the paper. It causes the trimming error by preventing paper from entering to the trimming section, or the opening is not enough for replacing the trimmer blade. Therefore, be sure not to change the installation position of PS52.

18.1.5 Trimmer press brake

(1) Positions from which removing is prohibited

- 1 gap adjusting screw of the trimmer press brake

[1] Trimmer press brake	[2] Screw not allowed to be adjusted/removed
-------------------------	--

(2) Reason of prohibition

- The trimmer press brake pushes the timing belt and prevents the trimmer press motor (M32) from rotating too much which caused by the inertia of the trimmer press board. Once the gap between the trimmer press brake and the timing belt changes, it damages the timing belt or disables the brake. Therefore, be sure not to adjust the gap adjusting screw of the trimmer press brake.

18.1.6 Fixing screw of the trimmer press timing belt

(1) Positions from which removing is prohibited

- All screws which fix the driving system of the trimmer press

[1] Screws not allowed to be adjusted/removed (all screws shown in the picture)	[2] Screws allowed to be removed
---	----------------------------------

(2) Reason of prohibition

- The paper holding screw on right and left drives the trimmer press plate through the timing belt. Once the part such as gear of the driving system is removed, the parallelism of the trimmer press plate is not guaranteed because of the belt tooth skipping. Therefore, be sure not to remove the attaching screw of the cover which fixes the driving system and the bearing fixing screw.

18.2 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover	Rear cover /Lt
2		Rear cover /Rt
3		Left cover
4		Upper cover /Fr

5		Upper cover /Rr3
6		Sub tray cover
7		Front door /Lt
8		Front door /Rt
9	Folding section	Folding unit

18.3 Disassembling and assembling procedures

18.3.1 Precautions on disassembling and assembling

- ⚠ CAUTION
- Be sure to unplug the power plug from the power outlet.

18.3.2 Rear cover /Lt

(1) Procedure

1. Remove 8 screws [1], and then remove the rear cover /Lt [2].
2. Reinstall the above parts following the removal steps in reverse.

18.3.3 Rear cover /Rt

(1) Procedure

1. Remove 8 screws [1], and then remove the rear cover /Rt [2].
2. Reinstall the above parts following the removal steps in reverse.

18.3.4 Left cover

(1) Procedure

1. Remove 7 screws [1], slide the bottom of the left cover [2] to the outside, and remove it to the bottom.
2. Reinstall the above parts following the removal steps in reverse.

18.3.5 Upper cover /Fr

(1) Procedure

1. Open the front doors /Rt and /Lt.
2. Remove the 5 screws [1] on the front, 2 screws [2], 1 screw [3] on the left, and 3 screws [4] under the cover.
3. Loosen a screw [5].
4. Lift up and remove the upper cover /Fr [6].

Note

- When removing the upper cover /Fr [6], pull the screw [5] to the front so that the tip of the screw does not catch the upper cover /Fr [6].

5. Reinstall the above parts following the removal steps in reverse.

18.3.6 Upper cover /Rr3

(1) Procedure

1. Remove the rear cover /Lt. (Refer to [G.18.3.2 Rear cover /Lt](#))
2. Remove 2 screw caps [1] and then remove 2 screws [2].
3. Remove 5 screws [3].
4. Loosen the screw [4] and then remove the upper cover /Rr3 [5].

Note

- When removing the upper cover /Rr3 [5], pull the screw [4] to the front so that the tip of the screw does not catch the upper cover /Rr3 [5].

5. Reinstall the above parts following the removal steps in reverse.

18.3.7 Sub tray cover

(1) Procedure

1. Remove the upper cover /Fr. (Refer to [G.18.3.5 Upper cover /Fr](#))
2. Remove the upper cover /Rr3. (Refer to [G.18.3.6 Upper cover /Rr3](#))
3. Remove 2 screws [1] and 4 screws [2], and then remove the sub tray cover [3].
4. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling the sub tray cover [3], pull the screw [4] to the outside.

18.3.8 Front door /Lt

(1) Procedure

1. Open the front door /Lt [1].
2. Remove the screw [2], and then remove the front door stopper /Lt [3].
3. Remove 2 screws [4] and remove the fulcrum [6] by sliding the hinge [5] upward, and then remove the front door /Lt [1].

Note

- Support the front door /Lt [1] with your hand so that it does not fall down when removing the screw [4].

4. Reinstall the above parts following the removal steps in reverse.

18.3.9 Front door /Rt

(1) Procedure

1. Open the front door /Rt [1].
2. Remove the screw [2], and then remove the front door stopper /Rt [3].
3. Remove 2 screws [4], remove the fulcrum [6] by sliding the hinge [5] upward, and then remove the front door /Rt [1].

Note

- Support the front door /Rt [1] with your hand so that it does not fall down when removing the screw [4].

4. Reinstall the above parts following the removal steps in reverse.

18.3.10 Folding unit

⚠ CAUTION

- Be sure to perform this operation with 2 people because the folding unit is heavy.

(1) Procedure

15anf2c010na

15anf2c011na

1. Remove the front door /Rt. (Refer to [G.18.3.9 Front door /Rt](#))
2. Remove the rear cover /Rt. (Refer to [G.18.3.3 Rear cover /Rt](#))
3. Remove 2 screws [1] and 2 clamps [2] from the rear of the folding unit.

Note

- Be sure not to let the clamps [2] fall down.

4. Remove the screw [3] and the ground [4].
5. Disconnect 6 connectors [5].
6. Remove the clamp and fall drop the wiring harness [7] from the hole [6] on the wiring harness guide.

7. Pull out the folding unit.
8. Pull out the folding unit. Remove 2 screws [1], separate the notch [2] from the hole [3] and remove the lower cover /2 [4].
9. Loosen the screw [5], remove the 2 screws [6] and remove the lower cover /1 [7].
10. Remove 2 screws [8], separate the notch [10] from the shaft [9] and remove the lower cover /3 [11].

11. Check point when reinstalling the lower cover /3.

Note

- Install the lower cover /3 [11] between 2 pins [2] of the shaft [1]. If it is installed at an improper position, other parts are damaged in storing the folding unit.

12. Remove 4 screws [1], and then lift up and remove the folding unit [2] with 2 people.

Note

- When reinstalling it, be sure to align the positioning pin [3] with the hole.

13. Reinstall the above parts following the removal steps in reverse.

Note

- When holding the folding unit, be sure to hold the shafts [4] at front and rear or the upper top of the side plate [5]. Never hold the jam release lever [6] or the handle [7]. They get damaged.
- When placing the folding unit, place it on the table to avoid the guide plate [8] on the front being contacted with the floor because it is projected from the bottom of the unit.

18.3.11 Note for replacing the board

Note

- When the SD control board (SDCB) is replaced, be sure to replace the EEPROM (IC68).

[1]

[2]

[3]

a0g6f3c053ca

- Remove the EEPROM (IC68) from the old SD control board (SDCB) [1] and install it into the new SD control board (SDCB) [2].

Note

- Be sure to install the "A" sections of the EEPROM (IC68) in the same direction.
- Be sure to set the SW3 [3] as the same as the settings of the old SDCB. (Refer to [L.2.10.1 SD control board](#))
- After replacing the SD control board (SDCB), conduct rewriting of the firmware. (Refer to [J. Rewriting of firmware](#))

19. PB-503

19.1 List of disassembling and assembling parts

No.	Section	Parts name
1	Cover	Front door
2		Front cover
3		Booklet door
4		Rear cover /Rt
5		Rear cover /Lt
6		Left cover
7		Relay conveyance gear cover /Fr
8		Relay conveyance gear cover /Rr
9		Pellet supply cover
10		SC cover /Fr
11		SC cover /Up
12		Upper cover /FrRt
13		Upper cover /FrLt
14		Upper cover /RrRt
15		Upper cover /RrLt
16		Upper cover /Md
17	Others	Deodorant unit
18	Pellet supply section	Pellet supply unit
19	Glue tank section	Glue tank unit
20	SC section	SC unit
21	Clamp section	Clamp unit
22	Others	PB left unit
23	Book stock section	Book lift wire
24		Cart wire
25	Conveyance section	Conveyance unit /Lw
26	Relay conveyance section	Relay conveyance unit
27	Cover paper supply section	Cover paper tray
28		Cover paper lift wire

19.2 Disassembling and assembling procedures

19.2.1 Precautions on disassembling and assembling

CAUTION

- Make sure to unplug the power cord of the main body from the power outlet when it is connected to the main body.

19.2.2 Front door

(1) Procedure

[1]

[6]

a15xt3c018ca

1. Open the front door [1].
2. Remove the screw [2] and then remove the wire [3].
3. Remove 2 screws [4], and then remove the front door [1] from the lower pin [6] with the mounting bracket [5] attaching to the front door [1].
4. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling the wire [3], tighten the screw at the position in the picture. (In order to prevent the wire from contacting with the tab.)

19.2.3 Front cover

(1) Procedure

1. Remove the front door. (Refer to [G.19.2.2 Front door](#))
2. Lift the lever [1] and pull out the cover paper tray.
3. Remove 2 screws [2].
4. Release the notches [3] at 2 positions from the screws [4] and pull out the projection [5] from the hole [6], and then remove the front cover [7].
5. Reinstall the above parts following the removal steps in reverse.

19.2.4 Booklet door

(1) Procedure

1. Open the booklet door [1].
2. Remove the screw [2] and then remove the wire [3].
3. Remove 2 screws [4], and then remove the booklet door [1] from the lower pin [6] with the mounting bracket [5] attaching to the booklet door [1].
4. Remove the mounting bracket [5] from the booklet door [1].
5. Reinstall the above parts following the removal steps in reverse.

19.2.5 Rear cover /Rt

(1) Procedure

1. Remove the deodorant unit. (Refer to [G.19.2.18 Deodorant unit](#))
2. Remove 9 screws [1], and then remove the rear cover /Rt [2].

Note

- When installing the rear cover, make sure to attach the metal plates [3] to the bottom of the rear cover.

3. Reinstall the above parts following the removal steps in reverse.

19.2.6 Rear cover /Lt

(1) Procedure

1. Remove the deodorant unit. (Refer to [G.19.2.18 Deodorant unit](#))
2. Remove 8 screws [1], and then remove the rear cover /Lt [2].

Note

- When reinstalling it, be sure to set it with the projection [3] put into the notch of the upper cover /RrLt [4], and with its bottom [5] put on the metal frame [6].

3. Reinstall the above parts following the removal steps in reverse.

19.2.7 Left cover

(1) Procedure

1. Loosen 2 screws [1].
2. Remove 5 screws [2] and then remove the left cover [3].
3. Reinstall the above parts following the removal steps in reverse.

19.2.8 Relay conveyance gear cover /Fr

(1) Procedure

1. Open the relay conveyance door.
2. Remove 2 screws [1] and remove the relay conveyance gear cover /Fr [2].
3. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling it, be sure to put the claw of the plate in the hole of the relay conveyance gear cover /Fr.

19.2.9 Relay conveyance gear cover /Rr

(1) Procedure

1. Open the relay conveyance door.
2. Remove 2 screws [1] and remove the relay conveyance gear cover /Rr [2].
3. Reinstall the above parts following the removal steps in reverse.

Note

- When reinstalling it, be sure to put it in the hole of the relay conveyance gear cover /Rr.

19.2.10 Pellet supply cover

(1) Procedure

1. Remove the deodorant unit. (Refer to [G.19.2.18 Deodorant unit](#))
2. Remove the upper cover /RrRt. (Refer to [G.19.2.15 Upper cover / RrRt](#))
3. Remove the relay conveyance gear cover /Rr. (Refer to [G.19.2.9 Relay conveyance gear cover /Rr](#))
4. Remove 2 screws [1] and remove the magnet catch /Rr [2].

5. Loosen a screw [1].
6. Remove 2 screws [2].
7. Open the pellet supply door [3]. Remove the pellet supply cover [5] in the arrow-marked direction [6] carefully so as not to damage the wire harness [4].

Note

- When removing/installing the glue supply cover, be careful not to cut or damage the wire binding [4].

8. Reinstall the above parts following the removal steps in reverse.

19.2.11 SC cover /Fr**(1) Procedure**

1. Remove the relay conveyance gear cover /Fr. (Refer to [G.19.2.8 Relay conveyance gear cover /Fr](#))
2. Remove 2 screws [1] and remove the magnet catch /Fr [2].

3. Remove the screw [1] and remove the SC cover /Fr [2] to the arrow-marked direction.

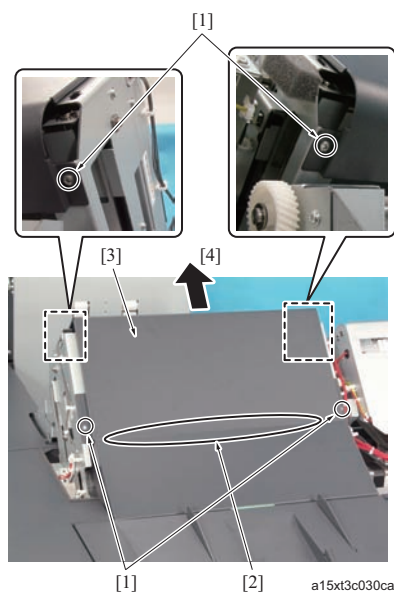

Note

- When reinstalling it, be sure to put 2 claws on the upper side [3] into the holes [4], and put the claw on the lower side [5] to the inside of the metal frame.

4. Reinstall the above parts following the removal steps in reverse.

19.2.12 SC cover /Up

(1) Procedure

1. Remove the pellet supply cover. (Refer to [G.19.2.19 Pellet supply unit](#))
2. Remove the SC cover /Fr. (Refer to [G.19.2.11 SC cover /Fr](#))
3. Remove 4 screws [1] and remove the SC cover /Up [3] in the arrow-marked direction [4] while slightly lifting up the circled part [2].
4. Reinstall the above parts following the removal steps in reverse.

19.2.13 Upper cover /FrRt

(1) Procedure

1. Remove the PB left unit. (Refer to [G.19.2.23 PB left unit](#))
2. Open the upper door [1].
3. Remove 7 screws [2].
4. Pull the left part of the upper cover /FrRt [3] in the arrow-marked direction [4]. Then release the cover from the projection [5] and disconnect it from the connector [6].

Note

- When reinstalling it, be sure to put the connector [6] under the upper cover /FrRt [3] properly so as not to let the cables get caught between the cover and the frame.

5. Reinstall the above parts following the removal steps in reverse.

19.2.14 Upper cover /FrLt

(1) Procedure

1. Remove the PB left unit. (Refer to [G.19.2.23 PB left unit](#))
2. Remove the relay conveyance gear cover /Fr. (Refer to [G.19.2.8 Relay conveyance gear cover /Fr](#))
3. Disconnect the connector [1].
4. Open the relay conveyance door.
5. Remove the screw [2] and release the wire [3].
6. Remove 7 screws [4] and then remove the upper cover /FrLt [5].

Note

- When reinstalling it, be careful not to nip the wiring harness [6].

7. Reinstall the above parts following the removal steps in reverse.

19.2.15 Upper cover /RrRt

(1) Procedure

1. Open the upper door [1].
2. Remove 4 screws [2] and then remove the upper cover /RrRt [3].
3. Reinstall the above parts following the removal steps in reverse.

19.2.16 Upper cover /RrLt**(1) Procedure**

1. Remove the PB left unit. (Refer to [G.19.2.23 PB left unit](#))
2. Remove the relay conveyance gear cover /Rr. (Refer to [G.19.2.9 Relay conveyance gear cover /Rr](#))
3. Open the relay conveyance door.
4. Remove 7 screws [1] and then remove the upper cover /RrLt [2].
5. Reinstall the above parts following the removal steps in reverse.

19.2.17 Upper cover /Md**(1) Procedure**

1. Remove the PB left unit. (Refer to [G.19.2.23 PB left unit](#))
2. Remove 2 screws [1] and then remove the upper cover /Md [2].
3. Reinstall the above parts following the removal steps in reverse.

19.2.18 Deodorant unit**(1) Procedure**

1. Remove the exhaust filter assy [1].

2. Remove 3 screws [1] and lean the deodorant unit [2]. Disconnect the connector [3] and then remove the deodorant unit [2].

Note

- When reinstalling it, be sure to put 2 claws [2] in the holes [5].

3. Reinstall the above parts following the removal steps in reverse.

Note

- Connecting the loop connector [1] to the connector [2] enables the operational check with no error indication without connecting the deodorant unit. After the operation, be sure to remove the loop connector [1] and put it inside [4] of the rear cover /Lt [3].
- After installing it, be sure to check that the deodorant fans /1 (FM97) and /2 (FM98) of the deodorant unit are rotating.

19.2.19 Pellet supply unit

(1) Procedure

1. Remove the rear cover /Rt. (Refer to [G.19.2.5 Rear cover /Rt](#))
2. Remove the pellet supply cover. (Refer to [G.19.2.10 Pellet supply cover](#))
3. Remove 2 screws [1].
4. Disconnect 4 connectors [2].

[2] a15xt3c045ca

5. Loosen 2 screws [1].
6. Remove 2 screws [2] and remove the pellet supply unit [3] upward.

Note

 - When removing the unit, be careful not to spill the pellet.
7. Reinstall the above parts following the removal steps in reverse.

19.2.20 Glue tank unit

⚠ CAUTION

- The glue tank unit is extremely hot right after turning OFF the main power switch (SW1) or the sub power switch (SW2) of the main body. To prevent burn injuries, leave the unit until it cools enough before performing the maintenance work.

(1) Procedure

[4] [5] [6] [7] a15xt3c047ca

a075f2c119ca

1. Remove the rear cover /Rt. (Refer to [G.19.2.5 Rear cover /Rt](#))
2. Remove the upper cover /RrRt. (Refer to [G.19.2.15 Upper cover / RrRt](#))
3. Remove the screw [1], disconnect 2 connectors [2], and then remove the suction unit [3].
4. Disconnect 3 connectors [4].
5. Remove the C-clip [5] and pull out the pin [6] straight up to release the coupling arm [7].

6. Remove 2 screws [1] and then uncouple the belt coupling bracket [2].

7. Pull out the glue tank unit [1] and remove 4 screws [2].

Note

- When moving the glue tank unit, be sure to hold it by the metal frame [3] on the right side of the unit.
- When removing the screw [2], be careful to avoid injury from sharp metal edges around the screw.

8. Further pull out the glue tank unit [1].

9. Remove the roller [5] from the rail [4] and remove the glue tank unit.

10. Reinstall the above parts following the removal steps in reverse.

Note

- After installing the glue tank unit, make a test print and binding to check that no glue is squeezed out of the top and bottom edges of the created book and no pages come off the cover when opening the book.

Note

- Never loosen or tighten the 2 screws because they are keeping the levelness and vertical position of the glue tank unit.

19.2.21 SC unit

(1) Procedure

1. Remove the PB left unit. (Refer to [G.19.2.23 PB left unit](#))
2. Remove the upper cover /Md. (Refer to [G.19.2.17 Upper cover / Md](#))
3. Remove the pellet supply unit. (Refer to [G.19.2.19 Pellet supply unit](#))
4. Remove the SC cover /Up. (Refer to [G.19.2.12 SC cover /Up](#))
5. Remove the upper cover /FrRt. (Refer to [G.19.2.13 Upper cover / FrRt](#))
6. Disconnect 5 relay connectors [1].
7. Remove the wire binding [3] from the SC unit [2] by releasing the wire binding from the saddles.

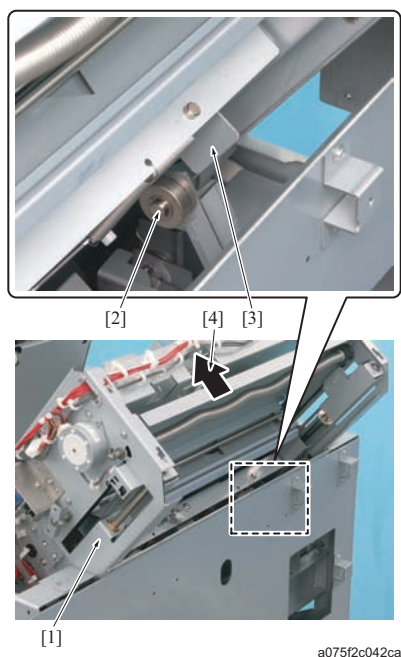

8. Remove 6 screws [1].
9. Remove 2 screws [2] and remove the wire [3] and the knob [4]. Then remove the belt [5].

Note

- After installing the belt [5], check that the lug belt is properly engaging with the pulleys with no slack and turns smoothly when the knob is turned.

10. Hold the metal frames [6] on the rear and front side of the unit, and remove the SC unit [7] to the arrowed direction.

11. Reinstall the above parts following the removal steps in reverse.

Note

- When the SC unit [1] is removed, the lock arm [2] is released from the stopper [3]. Therefore, when installing the SC unit, be sure to put the lock arm [2] under the stopper [3] while lifting and tilting the unit in the direction of the arrow [4].

19.2.22 Clamp unit

(1) Procedure

a15xt3c052ca

1. Remove the rear cover /Lt. (Refer to [G.19.2.6 Rear cover /Lt](#))
2. Remove the pellet supply unit. (Refer to [G.19.2.19 Pellet supply unit](#))
3. Disconnect 4 connectors [1].
4. Remove the E-ring [2] and pull out the pin [3] downward to release the coupling arm [4].
5. Release the wiring harness [5] between the connector [1] and the coupling arm [4] from the saddles.

a15xt3c053ca

6. Pull out the clamp unit [1] carefully watching the wire binding and the coupling arm on the rear of the unit.
7. Remove the 2 screws [2] and then remove the lock bracket [3].
8. Remove 2 screws [4].
9. While lifting the clamp unit [1] by holding its left and right metal frames [5], release the 4 notches [6] from the hooks [7] and remove the clamp unit.

Note

- When reinstalling the clamp unit, make sure that the 4 hooks [7] are properly fitted in the notches [6] of the unit.

10. Reinstall the above parts following the removal steps in reverse.

Note

- After installing the clamp unit, make a test print and binding to check that the cover and inside papers are neatly aligned without skewing.

19.2.23 PB left unit**(1) Procedure**

a15xt3c054ca

1. Remove the rear cover /Rt. (Refer to [G.19.2.5 Rear cover /Rt](#))
2. Remove the rear cover /Lt. (Refer to [G.19.2.6 Rear cover /Lt](#))
3. Remove the front door. (Refer to [G.19.2.2 Front door](#))
4. Remove the front cover. (Refer to [G.19.2.3 Front cover](#))
5. Remove 2 screws (with washer) [1].

[1]

a15xt3c055ca

6. Remove 4 screws [1].

[1]

a15xt3c056ca

7. Remove 4 screws [1].

[1]

a15xt3c057ca

8. Loosen 4 screws [1].

9. Remove the screws [1] at 2 positions, 2 each.

Note

- As the screw [1] is longer than other screws, be careful when reinstalling.

a15xt3c058ca

[1]

a15xt3c059ca

10. Remove the clamps [1] at 4 positions.

11. Rotate the PB left unit [2] around the wiring harness section [1] on the rear side to remove it from the PB right unit [3].

Note

- The PB left unit [2] is rotated up to about 90 degrees.
- When rotating the PB left unit [2], be sure to rotate it around the wiring harness section [1] and be careful not to damage the wiring harness.
- When reinstalling it, put the bottom of the PB left unit [5] on the brackets [4] on the lower side and then put the pins [6] on the upper side into the holes [7].

12. Reinstall the above parts following the removal steps in reverse.

19.2.24 Book lift wire

(1) Procedure

1. Carry out the I/O check in service mode in the following order of output check code, and turn OFF the sub power switch (SW2) and the main power switch (SW1) after moving the carriage section to its lowest position.
"77-55", "77-45", "77-58", "77-61"
2. Remove the front cover. (Refer to [G.19.2.3 Front cover](#))
3. Remove the rear cover /Lt. (Refer to [G.19.2.6 Rear cover /Lt](#))
4. Release the wiring harness [1] from the saddles and remove 2 screws [2] and then remove the wiring harness bracket [3].

5. Remove 3 screws [1] and remove the 4 mounting brackets [2] on the front and rear of the book stock unit.

Note

- When reinstalling, route the book lift wires /Fr [3] and /Rr [4] between 2 screws and 1 screw [1], and secure them with the mounting brackets [2].

6. Loosen the 2 screws [6] of the tension bracket /Fr [5].

Note

- When installing the tension bracket /Fr [5], be sure to tighten the screws [6] while pulling the bracket downward by the specified tension.
Standard value: 5kgf

7. Loosen the 2 screws [8] of the tension bracket /Rr [7].

Note

- When installing the tension bracket /Rr [7], be sure to tighten the screws [8] while pulling the bracket downward by the specified tension.
Standard value: 5kgf

a15xt3c039ca

8. Remove the E-ring [1], pulley [2], pin [3], and the wire end [4]. Then remove the book lift wire/Fr [5].

Note

- Install the book lift wire/Fr [5] as following. Route the wire so that it comes out of the lower right [6] of the pulley [2]. Loop the wire over the pulley [7], then loop it over the [8], [9], [10] pulleys in that order. Then wind the wire 6 times counterclockwise [11] over the pulley [2], and put the wire end [4] into the pulley.

9. Remove the E-ring [1], then remove the washers [2] and [3], spring [4], and gear [5].

10. Remove the coupling [6] and the pin [7].

a15xt3c040ca

11. Remove the E-ring [1], pulley [2], pin [3], and the wire end [4].
Then remove the book lift wire/Rr [5].

Note

- Install the book lift wire/Rr [5] as following. Route the wire so that it comes out of the lower left [6] of the pulley [2]. Loop the wire over the pulley [7], then loop it over the [8], [9], [10] pulleys in that order. Then wind the wire 6 times counterclockwise [11] over the pulley [2], and put the wire end [4] into the pulley.

12. Reinstall the above parts following the removal steps in reverse.

19.2.25 Cart wire

(1) Procedure

1. Remove 2 screws [1] and then remove the mounting plate /Rr [2].

Note

- When reinstalling it, be sure to open the registration plates /Fr [3] and /Rr [4] fully and then install the mounting plate /Rr [2].

2. Remove 2 screws [5] and then remove the mounting plate /Fr [6].

Note

- When reinstalling it, temporarily hold the mounting plate / Fr [6] and hook the tension gauge on the hole [7]. Then pull it in the arrow-marked direction [8] with the standard value and then fully tighten it.
Standard value: 1 to 1.5kgf
- Check that the wires are not crossed or they do not contact metal frame.

3. Remove the screw [1] and then remove the mounting metal fitting /Rr [2].
4. Remove the wire [3] from the pulley [4] and release it from the saddles [5].

Note

- When installing the wire [3] on the pulley [4], be sure to hook it on the pulley [6] with the mounting plate /Rr on the upper side.

5. Remove the screw [7] and remove the mounting metal fitting /Fr [8].
6. Remove the wire [9] from the pulley [10] and release it from the saddles [11].

Note

- When installing the wire [9] on the pulley [10], be sure to hook it on the pulley [12] with the mounting plate /Rr on the upper side.

7. Remove the screw [1] and release the wire.

Note

- When reinstalling it, be sure to put the edge part [3] between the projections [4].

8. Reinstall the above parts following the removal steps in reverse.

19.2.26 Conveyance unit /Lw**(1) Procedure**

1. Disconnect 3 connectors [1] and release the wire binding from 6 saddles.
2. Remove the screw [2] and slide the coupling [3] into the arrow-marked direction.
3. Remove 5 screws [4].
4. Release the conveyance unit /Lw [6] from the hooks [5] and remove the unit.

Note

- When reinstalling, be sure to align it to the projection [7].

5. Reinstall the above parts following the removal steps in reverse.

19.2.27 Relay conveyance unit

(1) Procedure

a15xt3c064ca

[2]

a15xt3c065ca

1. Remove the PB left unit. (Refer to [G.19.2.23 PB left unit](#))
2. Remove the upper cover /FrLt. (Refer to [G.19.2.14 Upper cover / FrLt](#))
3. Remove the upper cover /RrLt. (Refer to [G.19.2.16 Upper cover / RrLt](#))
4. Open the relay conveyance door.
5. Remove the E-rings [1] at 2 positions and remove the spacer [2], and then release the arm [3].

Note

- When releasing the arm [3], the conveyance guide plate [4] falls. Hold it by hand during operation.

6. Put down the conveyance guide plate [4].
7. Disconnect 3 connectors [5].

8. Remove 6 screws[1].
9. Remove the relay conveyance unit [3] by holding 2 shafts [2].

Note

- When removing the relay conveyance unit [3], insert a thin driver into the hole [5] so that the relay conveyance door [4] does not close. When moving down the relay conveyance door [4] lower than the horizontal position, the gear [6] comes off from the dumper gear [7] and the dumper adjustment is misaligned.

10. Reinstall the above parts following the removal steps in reverse.

19.2.28 Cover paper tray

⚠ CAUTION

- As the cover paper tray is heavy, be sure to perform the following work with 2 people.

Note

- When lifting the cover paper tray, be sure to hold it by the specified positions. Holding it at positions other than those positions specified damage the tray, thus resulting in a paper feed jam.

(1) Procedure

- Open the front door [1].
- Unlock the cover paper tray [3] by slightly pushing up the cover paper tray lock lever [2] with a screwdriver or a similar tool, and pull out the cover paper tray [3].

- Remove the 2 stopper screws [2], 1 for each right and left rail [1] and further pull out the cover paper tray.

a075f2c066ca

4. Remove 4 screws [1], 2 for each left and right rail, hold the cover paper tray [2] by the specified positions [5], and remove it straight up.

Note

- When installing the cover paper tray, make sure that the 4 knobs [3] on the rails are properly fitted in the notches [4] of the cover paper tray.
- When lifting the cover paper tray, be sure to hold the specified positions [5] by 2 people. Do not hold the part indicated with [6] as the part can easily become deformed, which adversely affects paper feed resulting in a paper jam.

5. Reinstall the above parts following the removal steps in reverse.

19.2.29 Cover paper lift wire

(1) Procedure

a075f2c067ca

a075f2c068ca

a075f2c069ca

1. Remove the cover paper tray. (Refer to [G.19.2.28 Cover paper tray](#))
2. Remove 6 screws[1].
3. Disconnect the connector [2], and remove the cover paper tray front cover [3].

4. Remove the E-ring [1], and remove the knob [2] and the belt [3].
5. Remove 6 screws[4] and remove the gear cover [5].

6. Remove the E-ring [1].

7. Slide the pulley [1], and pull out the wire ends of the lift wire /Fr1 [2] and /Fr2 [3] from each hole of the shaft [4].

Note

- The wire end of the shorter wire, lift wire /Fr2 [3], must be inserted into the shaft hole near the frame of the cover paper tray. The wire end of the shorter wire, lift wire/Fr2 [3], must be inserted into the shaft hole near the frame of the cover paper tray.
- When installing the pulley, lift the cover paper lift plate slightly to give slack to the wires and insert the wire ends one by one into the shaft holes. Then secure them with the pulley [1].

8. Remove the E-rings [1], 1 each, and then remove the wire cover [2].

9. Remove the cover paper lift wires/Fr1 [4] and /Fr2 [5] from each pulley [3].

Note

- When installing the wires, make sure that the wires are properly routed inside the wire covers [2] and are not crossed each other.

10. Pull out each wire end [2] through each hole of the cover paper lift plate arm [1].

Note

- When pulling out the wire, pull it out carefully so as not to damage it with sharp metal edges.

11. Remove 6 screws[1] and remove the gear cover [2].

12. Remove the E-ring [1] and the gear [2].

Note

- When removing the gear [2], be careful not to drop and lose the bearing [3].

13. Remove the bearing [1] and the E-ring [2], and then remove the gear [3].

Note

- When removing the gear [3], be careful not to drop the pin[4].

14. Remove the E-ring [1] and the gear [2].

Note

- When removing the gear [2], be careful not to drop the bearing [3].

15. Remove the E-ring [1] and the gear [2].

Note

- When removing the gear [2], be careful not to drop and lose the pin [3].

16. Remove the E-ring [1].

17. Pull out the cover paper lift wire/Rr1 [2] and /Rr2 [3] from the shaft holes in the same manner as step7.

18. Remove the cover paper lift wire/Rr1 [1] and /Rr2 [2] in the same manner as step8 to step10.

19. Reinstall the above parts following the removal steps in reverse.

Note

- When pulling out the wire end [3] of the cover paper lift wire /Rr2 [2], lift the cover paper lift plate until the cover paper lift plate arm [4] appears.
- The wire /Fr is gray in color and the wire /Rr is black.
- When the installation is completed, make sure that the lift plate is horizontal.

19.2.30 Binding mode procedure with manual operating function

- When a problem occurs at the clamp section or the cover paper table section, the binding can be checked with the manual operation.

Note

- Disconnect the connector (CN5) on the PB control board (PBCB) after the check. (Manual operation forbidden state)

(1) Procedure

[2]

[1]

a15xt3c043ca

1. Remove the rear cover /Lt. (Refer to [G.19.2.6 Rear cover /Lt](#))
2. Connect the connector [2] to the connector (CN5) [1] on the PB control board (PBCB).

a15xt3c044ca

3. Press the button /1 [1].
4. Open the front door and pull out the clamp unit.
5. Set the inside paper to the clamp unit.
6. Adjust the clamp alignment plates /Fr and /Rr to the inside paper edge on the shorter side by hand.
7. Press the button /2 [2].
8. Set the clamp unit.

Note

- Set the clamp unit gently. Setting it roundly causes the misalignment of inside papers widening the clamp alignment plate.

9. Close the front door.
10. Press the button /3 [3].

Note

- Disconnect the connector (CN5) on the PB control board (PBCB) after the check.

19.2.31 Multi feed detection boards /S (MFDBS) and /R (MFDBR)**Note**

- When replacing the multi-feed detection board /S (MFDBS), be sure to replace the multi-feed detection board /R (MFDBR) at the same time.
- When the multi-feed detection board is replaced, be sure to conduct the adjustment in replacing multi-feed detection board. (Refer to [I.5.6.12 Adjustment when replacing the cover paper multi feed detection board \(PB\)](#))

(1) Procedure

a075f2c095ca

a075f2c096ca

a075f2c097ca

1. Remove the conveyance unit /Lw [1]. (Refer to [G.19.2.26 Conveyance unit /Lw](#))
2. Remove 2 screws [2] and then remove the cover of the multi-feed detection board /S (MFDBS) [3].

3. Disconnect the connector [1].
4. Remove 2 screws [2], then remove the multi-feed detection board /S (MFDBS) [3].

5. Remove 2 screws [2] and then remove the cover of the multi-feed detection board /R (MFDBR) [2].

a075f2c098ca

6. Disconnect the connector [1].
7. Remove 2 screws [2] and then remove the multi-feed detection board /R (MFDBR) [3].
8. Reinstall the above parts following the removal steps in reverse.

(2) Note for installing the multi-feed detection boards /S (MFDBS) and /R (MFDBR)

a075f2c099ca

- The multi-feed detection boards /S (MFDBS) and /R (MFDBR) are installed on the same type board. Be careful not to confuse one with the other when installing them.
- Be sure to confirm the marking on the board when installing it.
Multi-feed detection board /S (MFDBS) [1]: 56UA
Multi-feed detection board /R (MFDBR) [2]: 15AG
- The connector shape is different for the multi-feed detection boards /S (MFDBS) and /R (MFDBR). So, even if it is installed, the connector cannot be connected.

20. IC Unit

20.1 Items not allowed to be disassembled/reassembled

20.1.1 IC board (ICB)

(1) Positions from which removing is prohibited

- Cooling fin for the chipset
- Battery
- Cooling fin
- EEPROM

[1]	Cooling fin for the chipset	[2]	Battery
[3]	Cooling fin	[4]	EEPROM

(2) Reason of prohibition

When removing them, the operation is no more warranty. Be sure not to remove them.

20.2 List of disassembling and assembling parts

Note

- This list shows the explanation of the disassembly and reassembly of the parts which are considered necessary to replace (other than periodically replaced parts). However, these parts do not require to be disassembled while in normal service operations.

No.	Section	Parts name
1	IC section	IC Unit
2		Memory
3		IC cooling fan (FM39)
4		SSD
5		Hard disk /2 (HDD2)
6		IC board (ICB)

20.3 Disassembling and assembling procedures

20.3.1 Precautions on disassembling and assembling

⚠ CAUTION

- Be sure to unplug the power plug from the power outlet.

20.3.2 IC Unit**(1) Procedure**

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Remove 8 screws [1] and remove the IC unit [2].
3. Reinstall the preceding parts following the removal steps in reverse.

20.3.3 Memory**(1) Procedure**

1. Remove the IC Unit. (Refer to [G.20.3.2 IC Unit](#))
2. Remove 20 screws [1] and remove the IC unit cover [2].

3. Open 2 memory slots [1] by finger and remove the memory [2].
4. Reinstall the preceding parts following the removal steps in reverse.

20.3.4 IC cooling fan (FM39)

(1) Procedure

1. Remove the IC Unit. (Refer to [G.20.3.2 IC Unit](#))
2. Remove the IC unit cover. (Refer to [G.20.3.3 Memory](#))
3. Disconnect the connector [1].
4. Remove 4 screws [2] and remove the IC cooling fan (FM39) [3].
5. Reinstall the preceding parts following the removal steps in reverse.

20.3.5 SSD

(1) Procedure

1. Remove the IC Unit. (Refer to [G.20.3.2 IC Unit](#))
2. Remove 6 screws [1] and then remove the cover [2].

3. Remove 2 screws [1] and remove the SSD [2] in the arrow-marked direction [3].
4. Reinstall the preceding parts following the removal steps in reverse.

Note

- After replacing SSD, be sure to rewrite the FW to the latest version.

20.3.6 Hard disk /2 (HDD2)**(1) Procedure**

1. Remove the IC Unit. (Refer to [G.20.3.2 IC Unit](#))
2. Remove the IC unit cover. (Refer to [G.20.3.3 Memory](#))
3. Remove 2 connectors [1] and 2 connectors [2].

4. Remove 4 screws [1] and remove the hard disk /2 unit [2].

NOTE

- When removing the hard disk /2 unit [2], be sure that the wiring does not come in contact with the screw section.

5. Remove 4 screws [1] and remove the hard disk /2 (HDD2) [2].
6. Reinstall the preceding parts following the removal steps in reverse.
7. After reinstalling the hard disk /2 (HDD2), conduct the following item.
 - IC HDD format (Refer to [I.5.14 IC HDD format](#))

20.3.7 IC board (ICB)

(1) Procedure

1. Remove the IC Unit. (Refer to [G.20.3.2 IC Unit](#))
2. Remove the IC unit cover. (Refer to [G.20.3.3 Memory](#))
3. Remove the IC cooling fan (FM39). (Refer to [G.20.3.4 IC cooling fan \(FM39\)](#))
4. Remove SSD. (Refer to [G.20.3.5 SSD](#))
5. Remove the hard disk /2 (HDD2). (Refer to [G.20.3.6 Hard disk /2 \(HDD2\)](#))
6. Disconnect the connector [1].

7. Remove 2 screws [1] and 2 screws [2].

8. Remove 10 screws [1] and remove the IC board (ICB) [2].
9. Reinstall the preceding parts following the removal steps in reverse.

21. GP-501

21.1 Centering punched holes

Die Set Position Cradle Adjustment, The die set position cradle is set in the factory; however, because of the punched-hole spacing on the PB die sets, there is a minimal amount of paper on each edge of the punched paper. The die set position cradle may have to be fine adjusted to center the punched-hole pattern in the paper. Listed below are the step-by-step instructions to adjust the die set to the proper position.

1. The punched-hole alignment must be checked on a piece of punched paper. Fold the punched sheet of paper in half [1] and the punched-holes should be aligned evenly along the edge and centered between the ends [2]. If the punched-holes are not aligned, then the die set cradle must be adjusted to align the punched holes.

Note

- The paper path is always constant, if the holes are not centered, you must adjust the die set cradle.

2. The two back covers on the GP-501 Punch must be removed to access the die set position cradle [1]. (Refer to [G.21.3.3 Removing the Rear Cover.](#))

3. Before adjusting the die set position cradle, you must first note what direction the die set cradle [1] must move.

4. Loosen the lock-down screw [1].
5. Using a flat-blade screwdriver, turn the adjustment screw [2] clockwise or counter-clockwise to move the die set position cradle.

6. Observe the punched paper. If the punched-holes are too close to the rear of the machine, then you must turn the adjustment screw counter-clockwise [1].

7. If the punched-holes are too close to the front of the machine, then you must turn the adjustment screw clockwise [1].

Note

- **Seven full turns of the adjustment screw result in a 1/4" (6.35 mm) change in the punched hole position.**

8. Before tightening the lock-down screw [1], tilt or bias the assembly towards the bottom of the machine [2] and tighten the lock-down screw. This will ensure positive engagement between the locking lever and the die set.
9. Run a test sample of punched paper and recheck paper alignment. Re-adjust if necessary.

21.2 Door latch

21.2.1 Door latch check

(1) Procedure

1. Ensure the door latch holds the door closed and that the activating bracket tab [1] depresses the door switch [2]. The tab should press the switch button just so that it is close to bottoming out.

21.2.2 Door Latch Adjustment

(1) To adjust the door latch:

1. Open the front door.
2. Loosen the two adjustment screws [1] on the door latch.
3. Do one of the following.
 - To move the door in, move the latch towards the front of the door.
 - To move the door out, move the latch away from the front of the door.
4. Tighten the 2 screws [1] and close the door.
5. Test its operation.

21.2.3 Door Latch and Switch Replacement

(1) To replace the door latch:

1. Open the front door.
2. Remove the 2 screws [1].

(2) To replace the door switch:

1. Open the front door.
2. Remove the 2 screws [1].
3. Unplug connectors from switch [2].

21.3 Preparing the GP-501 punch for service**21.3.1 Preparing the GP-501 punch for service**

Most service requires that the GP-501 Punch be separated from the printer and finisher and the rear cover be removed.

⚠ WARNING

- Disconnect the unit from power and maintain the cord in your possession. Failure to observe this warning can result in injury or electrical shock.

(1) Procedure

- Unplug the unit from power.
- Disconnect the communication cable
- Empty Chip Bin

21.3.2 Separating the Punch From the Printer

Follow the instructions as described in Installation Manual.

21.3.3 Removing the Rear Cover

Separate the punch from the printer and finisher first. (Refer to [G.21.3.2 Separating the Punch From the Printer.](#))

Note

- It is not necessary nor recommended that you remove the top cover.

(1) Procedure**(2) Tool Required**

- Phillips screwdriver or 1/4" hex head nut driver

(3) To remove the rear cover:

1. Remove the 5 screws on the entrance side [1] and remove the 6 rear cover screws [2].
2. Slide the cover out from under the top cover. Do not remove the top cover.

21.4 Leveling and aligning to the printer

The punch must be level and in line with the printer and finisher. If the printer and GP-501 Punch are moved or relocated, the system must be re-leveled.

Note

- It is important that the punch is not twisted or skewed. It must be level front to back and side to side.

(1) Procedure

Raise or lower the GP-501 Punch's castors to level it.

(2) Tool Required

- 2 3/8" open ended wrenches
- Level

(3) To level the punch:

1. Remove the rear cover and put the punch back in line with the printer and finisher.
2. Place the level on a flat surface of the top [1] and determine which castor needs adjustment.

3. Loosen the locking nut [1] of the castor.
4. From below the frame and at the top of the castor [2], adjust the height of the castor as needed.
5. Check the level and adjust as necessary.
6. Tighten the locking nut [1].
7. Ensure punch is level and in line with main body and finisher.
8. Install rear cover.

22. GP-502

The descriptions of the disassembling and reassembling procedure GP-502 are mentioned in the GP-502 service manual.

23. COMMERCIALLY AVAILABLE PARTS

23.1 Reinstalling the status indicator light

23.1.1 Configuration

[1]	Screws (2)	[2]	Status indicator light
-----	------------	-----	------------------------

23.1.2 Connector

(1) Connecting connector

(a) Connector position

[1]	CN160	-
-----	-------	---

(b) Connector specifications

Conne ctor	Pin Number	Signal name	Description	Output timing	Type of signal
160	1	PAT1	Light ON signal	L signal output when the printing available	Open collector
	2	PAT2		L signal output while in the scanning or printing operation	
	3	PAT3		L signal output when an abnormal stop occurs due to jams, error codes, no paper, or no toner	
	4	PAT4		L signal output when the toner supply message is displayed	
	5	24V	24V DC source	At all times	24V, 500mA
	6	P.GND	Power ground	-	-

23.1.3 Procedure

(1) Procedure for reinstallation

(a) Preparation

- Be sure to specify the wiring harness pin assignment on the status indicator light side to the CN160 pin assignment on the main body side so that the CN can be connected.

(b) Procedure on the main body side

a0g6t3c351ca

1050fs2423c

a0g6t3c302ca

1. Remove the rear cover. (Refer to [G.2.2.2 Rear cover](#))
2. Remove the upper cover /Rr2. (Refer to [G.2.2.9 Upper cover / Rr2](#))
3. Remove the upper cover /Rt. (Refer to [G.2.2.10 Upper cover /Rt](#))
4. Remove 2 screws [1] and then remove the adjusting knob [2].

5. Remove 4 screws [1] and then remove the arm cover /3 [2].
6. Remove 2 screws [3] and then remove the arm cover /4 [4].
7. Remove 2 screws [5] and then remove the arm cover /1 [6].
8. Remove 2 screws [7] and then remove the arm cover /2 [8].

Note

- The USB port [9] is not provided for the 951.

9. Remove 3 screws [1] and then remove the arm cover /5 [2].

10. Remove 3 screws [1] and then remove the exterior mounting plate /A [2].

1050fs2415c

11. Peel off the label [2] of the arm cover /5 [1].

1050fs2416c

12. With the bolt section [1] of the status indicator light provided with the nut [2] and washer [3], pass the wiring harness of the status indicator light through the arm cover /5 [4], the washer [5] and the nut [6] and tighten up the nut [6].

1050fs2417c

13. Pass the wiring harness [1] of the status indicator light through the operation unit support member [2] and install the arm cover /5 [4] with 3 screws [3].

14. Reinstall the arm cover /1, /2, /3 and /4 and the adjusting knob following the removal steps in reverse.

15. Connect the connector [1] of the status indicator light to the connector [2] on the main body for wiring.

Note

- **When wiring, be sure that the wiring harness does not come in contact with the drive section.**

16. Reinstall the upper cover /Rt and /Rt2 and the rear cover following the removal steps in reverse.

24. INDIVIDUAL SUPPORT PARTS

24.1 OUTLINE

Individual support parts set 3 types of items so that the demands expected in the POD market and Product printing market can be met. Providing these parts allows customization adequate to the type of users usage.

24.2 Installation of the paper feed assist plate

24.2.1 Purpose

The paper feed assist plate is used to adjust the pick-up pressure on paper by changing the load on the pick-up roller. Adjustments can be made according to the type of paper to increase the paper feed performance.

Improve a non feed condition that is apt to occur when feeding paper, such as a thick paper, that is hard to convey.

24.2.2 Characteristics

The paper feed assist plate weighs about 10g and the pick-up roller can be equipped with up to 4 plates. Increasing or decreasing the number of plates allows you to adjust the pick-up pressure corresponding to the type of paper.

4 plates only are packaged together with the main body and they can be purchased as service parts when required.

24.2.3 Checking of the contents of the package

The package contains the following as a set.

- [1] Paper feed assist plate: 4 pcs.
- [2] Screw: 2 pcs. (M3 x 8)

24.2.4 Procedure

For the main body, refer to "[I.9.3 Pick-up roller load adjustment.](#)" (Refer to [I.9.3 Pick-up roller load adjustment](#))

For the PF, refer to "[I.12.2 Pick-up roller height adjustment.](#)" (Refer to [I.12.2 Pick-up roller height adjustment](#))

24.3 Installing the postcard kit

24.3.1 Purpose

The postcard kit is set as the service parts to feed the postcard.

PF supports feeding of the postcard by default, and the postcard kit is only for the main body tray.

24.3.2 Checking of the contents of the package

The package contains the following as a set.

- [1] Bottom plate: 1
- [2] Upper plate /Fr, /Rr: 1 each (2 in total)
- [3] Regulation shaft /S (for the main body): 2
- [4] Screw: 4 pcs. (TP3 x 4)

24.3.3 Procedure

1. Pull out the paper feed tray.
2. Remove the screws [1], 2 each, and remove 2 paper guide covers [2].

3. Put the bottom plate [1] of the postcard kit on the paper lift board [2], and close the paper guides /Fr [3] and /Rr [4] to the minimum size to adjust the hole position [5].

4. Install the regulation shaft [1] to the upper plates /Fr [2] and /Rr [3] with the screw [4].

Note

- Be sure to install the shaft so that the flat side [5] at the edge faces to the notch [6] of the upper plate.
- Be sure to set the stepped section [7] of the regulation shaft in the upper plate.

5. Insert the projection [3] at the edge of the regulation shaft on the upper plates /Fr [1] and /Rr [2] assembled in step 4 to the hole [4] on the bottom plate, and then temporarily tighten the screws [5], 2 each.

6. Set some piece of postcard [1].

7. Loosen a screw [1].
8. With the release lever [2] placed at its original position, hold the stopper [3] and tighten the screw [1] to fix the stopper.
9. Set the tray. After confirm that the paper lift finished its elevation to the top by hearing the sound of the paper lift motor, pull out the tray again.

10. Adjust the position of the regulation shaft [2] so that the postcard [1] is pinched but not bent between the regulation shaft [2] without any space, and then tighten the screws [3], 2 each.

11. Install 2 paper guide covers [1] with the screws [2], 2 each.
12. Remove the screw to release the release lever that has been fixed at step 7.

Note

- No need to conduct a particular setting on DIPSW of the service mode.

24.4 Replacing the stroking shaft pressure spring

24.4.1 Purpose

The stroking shaft pressure spring is used to strengthen the stroking pressure of the de-curler belts /Up and /Lw.

24.4.2 Characteristics

The stroking shaft pressure spring improves the power of correcting the curl of the thin paper. However, the paper through of the thick paper and the plain paper in the de-curler section may be difficult.

24.4.3 Procedure

1. Pull out the duplex section.
2. Remove the fusing section.
3. Remove the reverse/exit solenoid assy.
4. Remove the de-curler solenoid /Lw assy.
5. Remove the de-curler solenoid /Up assy.
6. Remove the reverse/exit section.
7. Remove the de-curler motor assy.
8. Remove 2 E-rings [1] and remove 2 gears [2] and the belt [3].
9. Remove 2 E-rings [4] and remove 5 gears [2] and the belt [6].
10. Remove the E-ring [7] and remove the gear [8].
11. Remove the E-ring [9] and remove the gear [10].

Note

- When reinstalling the gears [2] and [5], 2 each, be sure to set the flange of each gear alternately.

12. Replacing 4 stroking shaft pressure spring [1].
13. Reinstall the above parts following the removal steps in reverse.

a0g6t3c342ca

H CLEANING/LUBRICATION

1. CLEANING/LUBRICATION PROCEDURES

The descriptions of the cleaning and the lubrication are mentioned in the maintenance section of each device.

I ADJUSTMENT/SETTING

1. CHECKING BEFORE STARTING WORK

When conducting claims in the field, it is necessary to check first the following:

1. Are the power supply and voltage secured in accordance with the specifications?
2. Is the power supply properly grounded?
3. Is any equipment that repeatedly consumes a lot of electricity connected to the same power supply? (for example: Electric noise sources such as elevator and air conditioner)
4. Are environmental conditions suitable for the machine?
 - High temperature and high humidity, direct sunlight, air ventilation, and so on.
 - Levelness of the location on which the machine is installed.
5. Does the cause of poor images lie in the original itself?
6. Is density selected properly?
7. Is the original glass stained?
8. Is proper paper used for copy?
9. Are copy consumables replaced with new ones at their life? (for example: Developer, drum, cleaning blade, and so on)
10. Is toner filled?

2. CHECKPOINTS WHEN CONDUCTING ON-SITE SERVICE

When repairing the machine, be sure to pay due attention to the following items.

1. Be sure to unplug the power plug from the power outlet. Also, when operating the machine with the power supplied, be careful of the scan of the exposure unit and be sure not to get caught by the gear.
2. The fusing section is hot. Be careful not to get burned for handling it.
3. The developing unit is magnetized strongly. Be careful not to bring a watch and instrument near to the unit.
4. Be careful not to damage the drum with a tool.
5. Be careful not to touch IC directly with bare hands.

3. UTILITY

3.1 List of utility menus

3.2 Start/exit

3.2.1 Start method

1. Be sure that the ordinary operation screen *1 is displayed.
Press [Utility/Counter] button.
 2. "Utility screen"
Utility screen is displayed.
- *1 Default is [Machine Screen].

3.2.2 Exit method

1. "Utility screen"
Press [Exit] to go back to the ordinary operation screen.
2. The new settings become effective.

4. LIST OF ADJUSTMENT ITEMS

4.1 Priority for Adjustment/Setting after replacing parts

Conduct the following adjustment on the items list in this order when replacing the parts on the list. Proper operation/image quality is not guaranteed without conducting those adjustment after the parts replacement.

Note

- When replacing the image processing board (IPB) due to the IPB being damaged, be sure to use the NVRAM board (NRB) that was installed on the damaged IPB on the new IPB. Contact the service manager of the authorized distributor if it is considered that NRB is also damaged.
- The NVRAM board (NRB) stores various adjustment data, setting data and counter data. Therefore, when replacing the PB, perform all adjustments and settings, and be sure to replace the parts for control correction (Drum, developer, cleaning blade, cleaning web). For details, contact the service manager of the authorized distributor.
- When replacing a board due to PB control board (PBCB), SD control board (SDCB), FD control board (FDCB), RU control board (RUCB) or FNS control board (FNSCB) being damaged, be sure to use the non-volatile memory (EEPROM) that was installed on the damaged control board on the new control board. Install the new EEPROM and perform all adjustments for the PB, SD, FD, RU or FS if it is considered that the EEPROM is also damaged.

Classification	Replacement parts/Others	Description
-	After PM Implementation	PM cycle setting counter reset
Drum (Refer to F.5.3.8 Replacing the drum/cleaning of the photo conductor section)	Drum (Refer to F.5.3.8 Replacing the drum/cleaning of the photo conductor section)	Setting powder application Charging Potential Auto. NOTE

- Service Mode of GP-502 is mentioned in the GP-502 service manual.

5.2 Start/exit**5.2.1 Start method**

You can access the service mode while the power is both turned ON and OFF.

In either way, the started service mode is the same, but how to exit differs.

NOTE

- Ensure appropriate security for Service Mode function setting procedures. They should NEVER be shown to any unauthorized person not involved with service jobs.
- If you leave the site with the Service Mode setting screen being displayed, unauthorized changes could occur for any set values. When you finish the setting of Service Mode, or if you have to leave the site by necessity when the Service Mode has been set, be sure to press [Exit] to the basic screen.

(1) Start-up from power ON

1. Be sure that the ordinary operation screen *1 is displayed.
Press [Utility/Counter] button.
 2. "Utility screen"
On the Operation panel, press the following buttons.
Stop → 0 → 0 → Stop → 0 → 1
When the CE password has been set, entering the password is required to enter the service mode.
 3. "Service Mode Menu screen"
The service mode appears.
- *1 Default is [MACHINE] screen.

(2) Start-up from power OFF

1. While pressing [Utility/Counter] button, turn ON the sub power switch (SW2).
When the CE password has been set, entering the password is required to enter the service mode.
2. "Service Mode Menu screen"
The service mode appears.

5.2.2 Exit method

Exit methods differ according to the condition of power switch, ON or OFF.

(1) When the power is ON

1. "Service Mode menu screen"
Press [Exit] to back to "Utility screen".
2. The new settings become effective.

(2) When the power is OFF

1. "Service Mode Menu screen"
Turn OFF the SW2.
2. After the reboot, the new settings become effective.

5.3 Machine adjustment**5.3.1 Tray Size Adjustment (Tray Adjustment)****(1) Functions**

It adjusts the paper size that the tray of PF-706 or the main body detects.

(2) Usage

Conduct this adjustment when the paper size detection does not work properly or when removing the paper guide.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [01 Tray Adjustment].
3. "Tray Adjustment screen"
Press [01 Tray Size Adjustment].
4. "Tray Size Adjustment screen"
Select (1) of the trays you want to adjust since the tray size adjustment has the following items.
[Tray1(1)] / [Tray1(2)] / [Tray2(1)] / [Tray2(2)] / [Tray3(1)] / [Tray3(2)] / [Tray4(1)] / [Tray4(2)] / [Tray5(1)] / [Tray5(2)] / [Tray6 (1)]/[Tray6 (2)]/
[Tray7 (1)]/[Tray7 (2)]/[Tray8 (1)]/[Tray8 (2)]

Note

- Be sure to select (1) of the trays you want to adjust.
- In case of 1250/1250P/1052, the tray size adjustment cannot be done on PF-703. Therefore, the corresponding tray cannot be selected.
- In case of 951, the tray size adjustment cannot be done on LU-409/410. Therefore, the corresponding tray cannot be selected.

5. Pull out the selected tray and extend the paper guide [1] and the rear stopper [2] at maximum.
Adjust the paper guide to the position 250mm (main scan direction).
Adjust the rear stopper to the position 139.7mm (5 1/2 inch: sub scan direction).

Note

- Use a scale for aligning it to 250mm in the main scan direction.

6. Set the tray.
7. Press [Start].
The current position of the selected tray is read in. When the adjustment is done, the message "Completed" is displayed.
8. Select (2) of the trays you want to adjust.

Note

- Be sure to select (2) of the trays you want to adjust.

9. Pull out the tray and extend the paper guide and the rear stopper at maximum.
Adjust the paper guide to the position 297mm (main scan direction).
Adjust the rear stopper to the position 457.2mm (18 inch: sub scan direction).
10. Set the tray.
11. Press [Start].
The current position of the selected tray is read in. When the adjustment is done, the message "Completed" is displayed.
12. To adjust other trays, repeat steps 4 to 11.

5.3.2 Tray Amount Detection Adj. (Tray Adjustment)

(1) Functions

Adjust the paper remaining VR detection of each trays.

(2) Usage

Adjust it when the paper remaining detection of the tray does not work properly.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
 2. "Service Mode Menu screen"
Press [01 Tray Adjustment].
 3. "Tray Adjustment screen"
Press [02 Tray Amount Detection Adj.].
 4. "Tray Amount Detection Adjustment screen"
Select [Lower] of the trays you want to adjust.
 5. Pull out the selected tray and remove all paper.
 6. Set the tray.
- Note**
- Confirm that the paper lift plate of the tray is in its lower limit position.
7. Press [Start].
After the adjustment, the message "Complete" appears.
 8. "Tray Amount Detection Adjustment screen"
Select [Upper] of the trays you want to adjust.
 9. Pull out the selected tray and set 1 piece of paper.
 10. Set the tray.
 11. Press [Start].
After the adjustment, the message "Complete" appears.
 12. To adjust other trays, repeat steps 4 to 11.

5.3.3 Transfer Belt Speed Adj. (Magnification Adjustment)

(1) Functions

Adjust the line speed of the transfer belt to the line speed of the drum.

(2) Usage

Usually, do not use this adjustment in the field.

Be sure to conduct "I.5.3.6 Registration Line Speed Adj. (Magnification Adjustment)", "I.5.3.7 Printer FD-Mag. Adj. (Side1) (Magnification Adjustment)", and "I.5.3.8 Printer FD-Mag. Adj.(Side2) (Magnification Adjustment)" when conducting the adjustment.

When a transfer jitter which occurs on each line speed cannot be corrected by Fusing Speed Adjustment, conduct this adjustment.

When there is a 60mm pitch unevenness occurs, conduct this adjustment.

(3) Preparation

Set A3 paper (about 130g/m²) in the tray1 and set the weight setting to [92 to 135g].

Set A3 paper (80g/m²) in the tray2 and set the weight setting to [75 to 91g].

(4) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu"
Press [01 Transfer Belt Speed Adj.].
4. "Transfer Belt Speed Adjustment screen"
Select [High Speed], and select [No.9] in Test Pattern Select.
5. "Transfer Belt Speed Adjustment screen"
Press [Print Mode].
6. "PRINT MODE screen"
Select the tray2 and output 3 sheets of the test pattern.
Note
 - Be sure to select the tray2 which has been set in the preparation.
 - Do not use the paper other than A3 size.
7. "PRINT MODE screen"
Press [Close] to go back to "Transfer Belt Speed Adjustment screen".
Check the level of the pitch unevenness about 60mm on the test pattern. In case the level of the pitch unevenness is bad, conduct step 8 and the following steps. in case the level of the pitch unevenness is good, the adjustment completes.
8. "Transfer Belt Speed Adjustment screen"
Set the line speed to 1 step shorter side from current value and select the test pattern No.9.
 - Adjustment range: -20 to +20
 - 1 Step = 0.05%
9. "Transfer Belt Speed Adjustment screen"
Press [Print Mode].
10. "PRINT MODE screen"
Select the tray2 and output 3 sheets of the test pattern to check the level of about 60mm pitch unevenness.
In case of 1250/1250, when the level of the pitch unevenness is good, input that setting value for both [Mid Speed] and [Low Speed].
In case of 1052/951, when the level of the pitch unevenness is good, input that setting value for [Low Speed].
11. Repeat steps 8 to 10 until the 60mm pitch unevenness is resolved.

5.3.4 Fusing Speed Adjustment (Magnification Adjustment)

(1) Function

By adjusting the fusing speed, appropriate the paper loop amount between the transfer belt unit and the fusing unit.

(2) Usage

When a transfer jitter occurs, conduct this adjustment.

(3) Preparation

Set A3 paper (about 130 g/m²) in the tray1 and set the weight setting to [92 to 135g].

(4) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu screen"
Press [02 Fusing Speed Adjustment].
4. "Fusing Speed Adjustment screen"
Select [High Speed], and select [No.9] in Test Pattern Select.
5. "Fusing Speed Adjustment screen"
Press [Print Mode].
6. "PRINT MODE screen"
Select the tray1 and output 3 sheets of the test pattern.
Note
 - Be sure to select the tray1 which has been set in the preparation.
 - Do not use the paper other than A3 size.
7. "PRINT MODE screen"
Press [Close] to go back to "Fusing Speed Adjustment screen".

Check the level of the transfer jitter on the test pattern.

- 1st: Check the transfer jitter around 100mm to 120mm from the paper trailing edge.

- 2nd and 3rd sheets of paper: Check the transfer jitter around 120mm from the paper trailing edge and 150mm from the paper leading edge.

In case the level of the transfer jitter is bad, conduct step 8 and the following steps. In case the level of the transfer jitter is good, the adjustment completes.

8. "Fusing Speed Adjustment screen"

Select [High Speed], set the fusing speed to 1 step shorter side from current value and select the test pattern [No.9].

- Adjustment range: -20 to +20
- 1step = 0.05%

9. "Fusing Speed Adjustment screen"

Press [Print Mode].

10. "PRINT MODE screen"

Select the tray1, output 3 sheets of the test pattern and check the transfer jitter as well as the step 7.

In case of 1250/1250P, when the level of the transfer jitter is good, input that setting value for both [Mid Speed] and [Low Speed].

In case of 1052/951, when the level of the transfer jitter is good, input that setting value for [Low Speed].

11. Repeat the steps 8 to 10 until the transfer jitter is resolved.

5.3.5 Fusing Speed Adjustment (Magnification Adjustment) EF-102

(1) Functions

By adjusting the fusing speed, optimize the paper loop amount between the transfer belt unit and the fusing unit.

(2) Usage

Conduct this adjustment when the image is smudged by the image misalignment at the front and rear side of the envelope.

Note

- This adjustment becomes enabled only when EF-102 is installed to 1250/1250P/1052.

(3) Preparation

Set the envelope at the middle tray of PF-703

(4) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu"
Press [02 Fusing Speed Adjustment].
4. "Fusing Speed Adjustment screen"
Select [Envelope], and select [No.9] in Test Pattern Select.
5. "Fusing Speed Adjustment screen"
Press [Print Mode].
6. "PRINT MODE screen"
Select the tray4 and output 3 sheets of the test pattern.

Note

- Be sure to select the tray4 which has been set in the preparation.
- For the size of the envelope available, refer to the product specification of EF-102. (Refer to: [C.12. EF-102](#))

7. "PRINT MODE screen"

Press [Close] to go back to "Fusing Speed Adjustment screen".

Check the level of the transfer jitter on the test pattern.

- The smudged image on the 1st envelope is recognized

If the level of the smudged paper is bad, conduct step 8 and the following steps. If the level of the smudged paper is good, the adjustment completes.

8. "Fusing Speed Adjustment screen"

Select [Envelope], set the fusing speed to 1 step shorter side from current value and select the test pattern [No.9].

- Adjustment range: -20 to +20
- 1 Step = 0.05%

9. "Fusing Speed Adjustment screen"

Press [Print Mode].

10. "PRINT MODE screen"

Select the tray including the envelope, output 3 sheets of the test pattern and check the transfer jitter as well as the step7.

11. Repeat the steps 8 to 10 until the paper does not get smudged by the image misalignment.

5.3.6 Registration Line Speed Adj. (Magnification Adjustment)

(1) Functions

Change the line speed of the registration roller to adjust it to the process speed of the drum transfer belt.

(2) Usage

When a transfer jitter occurs at a position about 160mm from the paper trailing edge, conduct this adjustment.

Note

- Usually, do not use this adjustment in the field. Only when a transfer jitter occurs at a position 160mm from the paper trailing edge, conduct this adjustment.
- This adjustment changes the line speed of the registration roller only. Unless properly adjusted, it causes a transfer jitter at a position 160mm from the paper trailing edge.
- Conduct "[I.5.3.7 Printer FD-Mag. Adj. \(Side1\) \(Magnification Adjustment\)](#)" and "[I.5.3.8 Printer FD-Mag. Adj.\(Side2\) \(Magnification Adjustment\)](#)" to adjust the magnification in the sub scan direction.
- The density of "[I.5.8.2 Test Pattern Density](#)" is reflected. So, be sure to check the set value of "[I.5.8.2 Test Pattern Density](#)" to ensure it is "255."

(3) Preparation

Set A3 paper (about 130g/m²) in the tray2 and set the weight setting to [92 to 135g].

(4) Procedure

1. "Service Mode Menu screen"

Press [01 Machine Adjustment].

2. "Service Mode Menu screen"

Press [02 Magnification Adjustment].

3. "Magnification Adjustment Menu screen"

Press [03 Registration Line Speed Adj.].

4. "Registration Line Speed Adjustment screen"

Set "9" to the test pattern and press [Print Mode].

5. "PRINT MODE screen"

Select Tray2 and output 3 sheets of the test pattern.

Note

- Be sure to select the tray2 which has been set in the preparation.
- Do not use the paper other than A3 size.

6. "PRINT MODE screen"

Check the transfer jitter at the position 160mm from the paper trailing edge on the test pattern.

Be sure that the density at the position 160mm from the paper trailing edge is the same as the density around.

7. When the transfer jitter occurs, press [Close].

8. "Registration Line Speed Adjustment screen"

Input the number 3 steps minus side from the present setting and press [Print Mode].

- Adjustment range: -40 to +55
- 1step: 0.05%

Note

- When the value of [Registration Line Speed] is -6, set -9.
- When inputting the setting data, be sure to input each 3 steps in the minus side at once. Input each 1 step only when the fine adjustment is needed. By the adjustment with each 1 step, it is hard to judge whether the change is caused by the driving system or by the adjustment value input.

9. Repeat the steps 4 to 8 until the transfer jitter is resolved.

5.3.7 Printer FD-Mag. Adj. (Side1) (Magnification Adjustment)**(1) Functions**

Adjust the magnification in the sub scan direction of the printer system front side only. (Change the line speed of the drum and the registration roller evenly.)

(2) Usage

When the transfer jitter occurs at positions about 300mm from the paper leading edge on the front side, about 150mm from the paper leading edge on the 2nd or later sheet or at random positions, conduct this adjustment to reduce the transfer jitter by adjusting the magnification in the sub scan direction to positive side.

Conduct this adjustment when the magnification in the sub scan direction of the printer system front side only is not within the standard value.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu screen"
Press [04 Printer FD-Mag. Adj. (Side1)].
4. "Printer FD-Mag. Adjustment (Side1) screen"
Press [Print Mode].
5. Set the A3 or 11 x 17 paper. Press the start button to output the test pattern.
6. Check the magnification in the sub scan direction.
 - Standard value: $\pm 0.5\%$ or less (When in life-size)
within 205.7 ± 1 mm

7. When the value is not within the standard value, press [Close].
8. "Printer FD-Mag. Adjustment (Side1) screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range: -10 to +10
 - 1 Step = 0.05%
9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.8 Printer FD-Mag. Adj.(Side2) (Magnification Adjustment)**(1) Functions**

Adjust the magnification in the sub scan direction of the printer system back side only. (Change the line speed of the drum and the registration roller evenly.)

(2) Usage

Conduct this adjustment when the transfer jitter occurs at the position to reduce the transfer jitter by adjusting the magnification in the sub scan direction.

Conduct this adjustment when the magnification in the sub scan direction of the printer system back side only is not within the standard value.

Note

- Be sure "1.5.3.7 Printer FD-Mag. Adj. (Side1) (Magnification Adjustment)" has been adjusted.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu"
Press [05 Printer FD-Mag. Adj. (Side2)].

4. "Printer FD-Mag. Adjustment (Side2) screen"
Select the paper tray that you want to adjust from the followings.
[Tray1]/[Tray2]/[Tray3]/[Tray4]/[Tray5]/[Tray6]/[Tray7]/[Tray8]
5. "Printer FD-Mag. Adjustment (Side2) screen"
Press [Print Mode].
6. Set A3 size paper on the tray selected in step 4 and press the start button to output the test pattern.
7. Check the magnification in the sub scan direction.
 - Standard value: $\pm 0.5\%$ or less (When in life-size)
within 205.7 ± 1 mm

8. When the value is not within the standard value, press [Close].
9. "Printer FD-Mag. Adjustment (Side2) screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range: -10 to +0
 - 1 Step = 0.05%
10. Repeat steps 4 to 9 until the standard value can be obtained.

5.3.9 Printer CD-Mag. Adjustment (Side1) (Magnification Adjustment)

(1) Functions

Adjust the magnification in the main scan direction of the printer system front side only. (Change the magnification in image-processing before the exposure.)

(2) Usage

Conduct this adjustment when the magnification in the main scan direction of the printer system front side only is not within the standard value.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu"
Press [06 Printer CD-Mag. Adj. (Side1)].
4. "Printer CD-Mag. Adjustment (Side1) screen"
Press [Print Mode].
5. Set the A3 or 11 x 17 paper. Press the Start button to output the test pattern.
6. Check the magnification in the main scan direction.
 - Standard value: $\pm 0.5\%$ or less (When in life-size)
within $190\text{mm} \pm 1\text{mm}$

7. When the value is not within the standard value, press [Close].
8. "Printer CD-Mag. Adjustment (Side1) screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range: -10 to +10
 - 1 Step = 0.05%
9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.10 Printer CD-Mag. Adjustment (Side2) (Magnification Adjustment)

(1) Functions

Adjust the magnification in the main scan direction of the printer system back side only. (Change the magnification in image-processing before the exposure.)

(2) Usage

Conduct this adjustment when the magnification in the main scan direction of the printer system back side only is not within the standard value.

Note

- Be sure "1.5.3.7 Printer FD-Mag. Adj. (Side1) (Magnification Adjustment)" has been adjusted.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu"
Press [07 Printer CD-Mag. Adj. (Side2)].
4. "Printer CD-Mag. Adjustment (Side2) screen"
Select the paper tray that you want to adjust from the followings.
[Tray1]/[Tray2]/[Tray3]/[Tray4]/[Tray5]/[Tray6]/[Tray7]/[Tray8]
5. "Printer CD-Mag. Adjustment (Side2) screen"
Press [Print Mode].
6. Set A3 size paper on the tray selected in step 4 and press the start button to output the test pattern.
7. Measure the magnification of the main scan direction with a scale.
 - Standard value: $\pm 0.5\%$ or less (When in life-size)
within $190\text{mm} \pm 1\text{mm}$

8. When the value is not within the standard value, press [Close].
9. "Printer CD-Mag. Adjustment (Side2) screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range: -10 to +0
 - 1 Step = 0.05%
10. Repeat steps 4 to 9 until the standard value can be obtained.

5.3.11 Scanner FD-Mag. Adj. (Magnification Adjustment)**(1) Functions**

Adjust the magnification in the sub scan direction of the scanner system (the scanning speed of the exposure unit).

(2) Usage

Conduct this adjustment when the magnification in the sub scan direction in scanning is not within the standard value.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.
- Be sure the printer FD magnification adjustment has been adjusted.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu"
Press [08 Scanner FD-Mag. Adj.].
4. "Scanner FD-Mag. Adjustment screen"
Press [Print Mode].
5. Select A3 or 11 x 17 paper, and set the "test chart" on the original glass. Press the Start button.
6. Measure the magnification in the sub scan direction with a scale.
 - Standard value: $\pm 0.5\%$ or less (When in life-size)
within $200\text{mm} \pm 1\text{mm}$

7. When the value is not within the standard value, press [Close].
8. "Scanner FD-Mag. Adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range: -40 to +40
 - 1 Step = 0.05%

9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.12 ADF FD-Mag. Adjustment (Magnification Adjustment)

(1) Functions

Adjust the magnification in the sub scan direction of the scanner system (the scanning speed of the DF).

(2) Usage

Conduct this adjustment when the magnification in the sub scan direction in scanning is not within the standard value.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.
- Be sure the printer FD magnification adjustment has been adjusted.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [02 Magnification Adjustment].
3. "Magnification Adjustment Menu"
Press [09 ADF FD-Mag. Adjustment].
4. "ADF FD-Mag. Adjustment screen"
Select the item to be adjusted and press [Print Mode].
5. Select the A3 or 11 x 17 paper, and set the "adjustment chart" on the ADF. Press the Start button.
6. Measure the magnification in the sub scan direction with a scale.
 - Standard value: $\pm 0.5\%$ or less (When in life-size)
within $190\text{mm} \pm 1\text{mm}$

7. When the value is not within the standard value, press [Close].
8. "ADF FD-Mag. Adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range: -40 to +40
 - 1 Step = 0.05%
9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.13 Printer Restart Timing Adjustment (Side1) (Timing Adjustment)

(1) Functions

Adjust the leading edge timing of front side by changing the LPH exposure start timing.

(2) Usage

Conduct this adjustment when the leading edge on the front side is lacking or too much in printing.

Note

- Be sure "I.5.3.7 Printer FD-Mag. Adj. (Side1) (Magnification Adjustment)" has been adjusted.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
 2. "Service Mode Menu screen"
Press [03 Timing Adjustment].
 3. "Timing Adjustment Menu screen"
Press [01 Printer Restart Timing(Side1)].
 4. "Printer Restart Timing Adjustment(Side1) screen"
Tray can be adjusted by all tray or each tray. Select the item you adjust, and press [Print Mode].
- Note**
- In case of 1250/1250P/1052, [Tray1 Offset] to [Tray8 Offset] can be adjusted.
 - In case of 951, [Tray1 Offset] to [Tray5 Offset] can be adjusted.
5. Set the A3 or 11 x 17 paper. Press the Start button to output the test pattern.
 6. Measure the leading edge timing with a scale.
 - Standard value: $20 \pm 0.5\text{mm}$ (AB)
 - Standard value : 25.4 (1 inch) $\pm 0.5\text{mm}$ (Inch)

7. When the value is not within the standard value, press [Close].
8. "Printer Restart Timing Adjustment(Side1) screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range: -30 to +30
 - 1 Step = 0.1mm
9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.14 Printer Restart Timing Adjustment (Side2) (Timing Adjustment)

(1) Functions

Adjust the leading edge timing of back side by changing the LPH exposure start timing.

(2) Usage

Conduct this adjustment when the leading edge on the back side is lacking or too much in printing.

Note

- Be sure "I.5.3.8 Printer FD-Mag. Adj.(Side2) (Magnification Adjustment)" has been adjusted.
- Be sure "I.5.3.13 Printer Restart Timing Adjustment (Side1) (Timing Adjustment)" has been adjusted.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [03 Timing Adjustment].
3. "Timing Adjustment Menu screen"
Press [02 Printer Restart Timing(Side2)].
4. "Printer Restart Timing Adjustment(Side2) screen"
Tray can be adjusted by each tray. Select the item you adjust, and press [Print Mode].

Note

- In case of 1250/1250P/1052, [Tray1 Offset] to [Tray8 Offset] can be adjusted.
- In case of 951, [Tray1 Offset] to [Tray5 Offset] can be adjusted.

5. Set the A3 or 11 x 17 paper. Press the Start button to output the test pattern.
6. Measure the leading edge timing with a scale.
 - Standard value: $20 \pm 0.5\text{mm}$ (AB)
 - Standard value : 25.4 (1 inch) $\pm 0.5\text{mm}$ (Inch)

7. When the value is not within the standard value, press [Close].
8. "Printer Restart Timing Adjustment(Side2) screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range: -30 to +30
 - 1 Step = 0.1mm
9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.15 Printer Registration Loop Adj. (Timing Adjustment)

(1) Functions

Adjust the paper loop amount in the registration roller section.

(2) Usage

Conduct this adjustment when the paper skew, crease, or jamming occurs in the registration roller section.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].

2. "Service Mode Menu screen"
Press [03 Timing Adjustment].
3. "Centering Adjustment Menu screen"
Press [03 Printer Registration Loop Adj.].
4. "Printer Registration Loop Adjustment screen"
Select the item that you want to adjust and press [Print Mode].

Note

- The adjustment values for "Side1" and "Side2" are reflected on the following paper weight and size

Length in the sub scan direction	Paper weight	
	50 g/m ² to 162 g/m ²	163 g/m ² to 350 g/m ²
Less than 169.9mm	Plain	Plain
170mm to 483mm	Plain	Thick

Side2

Length in the sub scan direction	Paper weight	
	50 g/m ² to 162 g/m ²	163 g/m ² to 350 g/m ²
Less than 184.9mm	Plain	Plain
185mm to 483mm	Plain	Thick

- The adjustment values for "Side1 Thin" and "Side2 Thin" are reflected on the paper weight 40g/m² to 49g/m².
- The adjustment value for "Side1 Envelope" is reflected on the envelope.

5. Set the copy according to the item that has been adjusted and press the start button to output the test pattern.
6. When the trouble is not solved, press [Close].
7. "Printer Registration Loop Adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Adjustment range:
For 1250/1250P/1052
Side1: -8 (small) to +10 (big)
Side2: -10 to +10
Side1 Thick: -5 to +10
Side2 Thick: -10 to +10
Side1 Thin: -5 to +10
Side2 Thin: -10 to +10
Side1 Envelope: 0 to +10
<In case of 951>
Side1: -12 (Small) to +5 (Big)
Side2: -10 to +10
Side1 Thick: -9 to +5
Side2 Thick: -10 to +10
Side1 Thin: -9 to +5
Side2 Thin: -10 to +10
 - 1 Step = 1mm
8. Repeat the steps 4 to 7 until an appropriate value is obtained.

5.3.16 Printer Pre-registration Adj. (Timing Adjustment)**(1) Functions**

Adjust the paper loop amount in the pre-registration roller section.

(2) Usage

Conduct this adjustment when the paper skew, crease, or jamming occurs in the pre-registration roller section.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [03 Timing Adjustment].
3. "Timing Adjustment Menu screen"
Press [04 Printer Pre-registration Adj.].
4. "Printer Pre-registration Adjustment screen"
Select the size of paper you want to adjust from [Not Thin Paper] or [Thin Paper].
5. "Printer Pre-registration Adjustment screen"
Tray can be adjusted by each tray. Select the item you adjust, and press [Print Mode].

Note

- In case of 1250/1250P/1052, [Tray1] to [Tray8] can be adjusted.
- In case of 951, [Tray1] to [Tray5] can be adjusted.

6. Select A3 or 11 x 17 paper, and press the Start key to output the test pattern.
7. When the trouble is not solved, press [Close].

8. "Printer Pre-registration Adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -10 (small) to +10 (large)
 - 1 Step = 1mm
9. Repeat the steps 4 to 8 until an appropriate value is obtained.

5.3.17 Printer Lead Edge Margin Adj. (Timing Adjustment)

(1) Functions

Adjust the image erasure amount of the leading edge.

(2) Usage

Conduct this adjustment when the image erasure (deleted) amount of the leading edge is not within the standard value.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [03 Timing Adjustment].
3. "Timing Adjustment Menu screen"
Press [05 Printer Lead Edge Margin Adj.].
4. "Printer Lead Edge Margin Adjustment screen"
Press [Print Mode].
5. Select A3 or 11 x 17 paper, and press the Start key to output the test pattern.
6. Check the printer lead edge timing.
 - Standard value: within 2mm \pm 1mm
7. When the value is not within the standard value, press [Close].
8. "Printer Lead Edge Margin Adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -20 (small) to +40 (large)
 - 1 Step = 0.1mm
9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.18 Lead Edge Transfer Switch Timing Adj. (Timing Adjustment)

(1) Functions

Adjust the start up timing of the transfer current value switch.

(2) Usage

When the transfer error area on the leading edge of the image is large under the low temperature/humidity environment, conduct this adjustment.

(3) Preparation

Set A4 paper (64g/m²) in the tray1 and set the weight setting to [62g to 74g]. KONICA MINOLTA J paper 55kg (64g/m²) is recommended.

(4) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
 2. "Service Mode Menu screen"
Press [03 Timing Adjustment].
 3. "Timing Adjustment Menu screen"
Press [06 Lead Transfer SW Timing Adj.].
 4. "Lead Edge Transfer Switch Timing Adj. screen"
Press [Print Mode].
 5. "PRINT MODE screen"
Select the tray1 and output 3 sheets of the test pattern.
- Note**
- Be sure to select the tray1 which has been set in the preparation.
6. "PRINT MODE screen"
Press [Close] to return to "Lead Edge Transfer Switch Timing Adj. screen".
Measure the transfer start up timing amount at the leading edge with the output the test pattern.

- a = Transfer start up timing amount
- b = Paper leading edge

Note

- For the measurement of the transfer start up timing amount, select the image whose measured amount is the largest of 3 outputs.
- For the measurement of the transfer start up timing amount, measure the area from the paper leading edge to the shadow part of the image.

7. "Lead Edge Transfer Switch Timing Adj. screen"

Enter a numeric value through the numeric keys and press [Set].

- Standard value: a = 2.5mm to 4.0mm
- Adjustment range: -3 to +8
- 1step:1msec = 0.5mm

Note

- Do not adjust it to less than 2.0mm or the separation error occurs.

8. Repeat steps 4 to 7 until the standard value can be obtained.

5.3.19 Scanner Restart Timing Adj. (Timing Adjustment)**(1) Functions**

Adjust image leading edge timing of original scanning from the original glass (the starting position for reading while in the original scanning mode by the exposure unit).

(2) Usage

Conduct this adjustment when the leading edge is lacking or too much in scanning.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not has the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [03 Timing Adjustment].
3. "Timing Adjustment Menu screen"
Press [07 Scanner Restart Timing Adj.].
4. "Scanner(Orig. Glass) Restart Timing Adj. screen"
Press [Print Mode].
5. Select A3 or 11 x 17 paper, place a "test chart" on the original glass, and press Start key.
6. Check the leading edge timing.
 - Standard value: within ± 1.5 mm
7. When the value is not within the standard value, press [Close].
8. "Scanner(Orig. Glass) Restart Timing Adj. screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -40 (image, fast) to +40 (image, slow)
 - 1 Step = 0.1mm
9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.20 ADF Restart Timing Adj. (Timing Adjustment)**(1) Functions**

Adjust the image leading edge timing of DF original scanning (the starting position for reading while in the original scanning mode).

(2) Usage

Conduct this adjustment when the leading edge is lacking or too much in scanning DF.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not has the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [03 Timing Adjustment].
3. "Timing Adjustment Menu screen"
Press [08 ADF Restart Timing Adj.].
4. "ADF restart timing adj. screen"
Select the side of the original to be adjusted and press [Print Mode].
5. Select A3 or 11 x 17 paper, and set the "adjustment chart" on the ADF. Press the Start Key.
6. Check the image leading edge timing.
 - Standard value: ± 2 mm
7. When the value is not within the standard value, press [Close].
8. "ADF restart timing adj. screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -50 (image, fast) to +50 (image, slow)
 - 1 Step = 0.1mm

9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.21 ADF Registration Loop Adj. (Timing Adjustment)

(1) Functions

Adjust the original loop amount in the DF registration roller section.

(2) Usage

Conduct this adjustment when the paper skew, crease, or jamming occurs in the DF registration roller section.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Machine adjustment menu"
Press [03 Timing Adjustment].
3. "Timing Adjustment Menu screen"
Press [09 ADF Registration Loop Adj.].
4. "ADF regist loop adj. screen"
Select the side of the original to be adjusted and press [Print Mode].
5. Select A3 or 11 x 17 paper, and set the "adjustment chart" on the ADF. Press the Start Key.
6. When the ADF registration loop amount is not appropriate, press [Close].
7. "ADF regist loop adj. screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -10 (small) to +10 (large)
 - 1 Step = 0.5mm
8. Repeat the steps 4 to 7 until an appropriate value is obtained.

5.3.22 Printer Centering Adjustment (Centering Adjustment)

(1) Functions

Adjust the centering of images of the printer main scan direction by changing the LPH writing position.

(2) Usage

Conduct this adjustment when the image mis-centering of the main scan direction occurs while in printing.

Note

- Be sure that " " and " " have been adjusted. [I.5.3.9 Printer CD-Mag. Adjustment \(Side1\) \(Magnification Adjustment\)](#) [I.5.3.10 Printer CD-Mag. Adjustment \(Side2\) \(Magnification Adjustment\)](#)

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [04 Centering Adjustment].
3. "Centering Adjustment Menu screen"
Press [01 Printer Centering Adjustment] and press [Print Mode].
4. Select A3 or 11 x 17 paper, and press the Start key to output the test pattern.
5. Fold the printed paper into 2 along the center in the main scan direction, and measure how much the left and right lines misalign from each other.
 - Standard value: within $\pm 1.5\text{mm}$
6. When the value is not within the standard value, press [Close].
7. "Printer Centering Adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -64 (image in front) to +63 (image in back)
 - 1 Step = 0.1mm
8. Repeat steps 4 to 7 until the standard value can be obtained.

5.3.23 Scanner Centering Adjustment (Centering Adjustment)

(1) Functions

Adjust the centering of images in the main scan direction when scanning from the original glass.

(2) Usage

Conduct this adjustment when the image mis-centering of the main scan direction occurs while in scanning.

Note

- Be sure ["I.5.3.22 Printer Centering Adjustment \(Centering Adjustment\)"](#) has been adjusted.
- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [04 Centering Adjustment].

3. "Centering Adjustment Menu screen"
Press [02 Scanner Centering Adjustment] and press [Print Mode].
4. Select A3 or 11 x 17 paper, place a "test chart" on the original glass, and press Start key.
5. Fold the printed paper into 2 along the center in the main scan direction, and measure how much the left and right lines misalign from each other.
 - Standard value: within $\pm 1.5\text{mm}$
6. When the value is not within the standard value, press [Close].
7. "Scanner (Orig. Glass) Centering Adj. screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -30 (image in front) to +30 (image in back)
 - 1 Step = 0.1mm
8. Repeat steps 4 to 7 until the standard value can be obtained.

5.3.24 ADF Centering Adjustment (Centering Adjustment)

(1) Functions

Adjust the centering of images when scanning from the DF.

(2) Usage

Conduct this adjustment when the image mis-centering of the main scan direction occurs while in original scanning from DF.

Note

- Be sure "[I.5.3.22 Printer Centering Adjustment \(Centering Adjustment\)](#)" has been adjusted.
- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
 2. "Service Mode Menu screen"
Press [04 Centering Adjustment].
 3. "Centering Adjustment Menu screen"
Press [03 ADF Centering Adjustment].
 4. "ADF Centering Adjustment screen"
Select the item to be adjusted and press [Print Mode].
- * When the sub power switch is ON, the position of the centering sensor /Fr on ADF is automatically detected and displayed.

Note

- "Small" represents paper which is smaller than 300mm in the sub-scan direction. However, it excludes A4 or 8 1/2 x 11 which is automatically adjusted by the centering sensor.
- "Large" represents paper which is larger than 300mm in the sub-scan direction. However, it excludes A3 or 11 x 17 which is automatically adjusted by the centering sensor.
- When adjusting ADF centering sensor adjustment (SIDE1: A4 or 8 1/2 x 11) and (SIDE1: A3 or 11 x 17), change the centering sensor /Fr position to "LT" side. Then, turn OFF/ON the sub power switch, and follow the procedure of this adjustment. (Refer to [I.10.5 Centering sensor switchover adjustment \(DF-615 only\)](#))
- The ADF centering sensor adjustment (SIDE1: A4 or 8 1/2 x 11) and (SIDE1: A3 or 11 x 17) is available only for 1250/1250P/1052.

5. Select paper according to the adjusted item. Set the "adjustment chart" on the ADF and press the Start Key.
6. Fold the printed paper into 2 along the center in the main scan direction, and measure how much the left and right lines misalign from each other.
 - Standard value: within $\pm 2\text{mm}$
7. When the value is not within the standard value, press [Close].
8. "ADF centering adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -30 (image in front) to +30 (image in back)
 - 1 Step = 0.1mm
9. Repeat steps 4 to 8 until the standard value can be obtained.

5.3.25 Gap Adj. Between LPH Chips (LPH Adjustment)

(1) Functions

Adjust the light intensity value between chips according to the implementation gap of the LED chip.

(2) Usage

Check it when replacing the LPH unit.

When sharp white lines or black lines occur locally in sub scan direction, conduct this adjustment.

Note

- No need to adjust if the white or black line does not appear on the test pattern after replacing the LPH unit.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [05 Magnification Adjustment].
3. "LPH Adjustment Menu screen"
Press [01 Gap adj. between LPH chips].

4. "Gap Adjustment Between LPH Chips screen"
Select [Dark Gray] or [Light Gray] in "Test Pattern Select".

Note

- To make the judgment easier, select [Dark Gray] when the white line occurs and select [Light Gray] when the black line occurs.

5. "Gap Adjustment Between LPH Chips screen"
Select [Off] in "Line Draw" and press [Print Mode].
6. "PRINT MODE screen"
Set the A4 or 8 1/2 x 11 paper. Press the Start key to output the test pattern.
7. "Gap Adjustment Between LPH Chips screen"
Select [On] in "Line Draw" and press [Print Mode].
8. "PRINT MODE screen"
Set the A4 or 8 1/2 x 11 paper. Press the Start key to output the test pattern.
 - The white lines and the black lines appear. Each black lines mean 10 unit of gap positions. Check the position which gets the gap adjustment by comparing the test pattern (without lines) output in step 6 to the position of the lines.
Press [Close].

a0g6f3c001ca

9. "Gap Adjustment Between LPH Chips screen"
Check if the white line or the black line occurs.
Since the sharp white or black line comes from the LPH, focus on the sharp lines to specify the position of occurrence.
Select the key from [1] to [39] of the LPH chips gap corresponding to the target line position.

Note

- The line which comes from the process is wide and fuzzy.

10. "Gap Adjustment Between LPH Chips screen"
In the case of white line: Adjust to positive side.
In the case of black line: Adjust to negative side.
 - Adjustment range: -8 to + 8
 - 1 Step = 1.0%

Note

- If the adjustment value between chips of LED is too big, it causes the black line. If the adjustment value is too small, it causes the white line.
- Input the value by pressing [+] or [-].
- When adjusting all 39 positions at a time, press [All Offset].

11. Repeat the steps 4 to 10 until an appropriate value is obtained.

5.3.26 Black Line Restraint Adj. (LPH Adjustment)

(1) Functions

Adjust the 1mm width black line that the optical property of the SELFOC Lens Array (SLA) causes.

(2) Usage

When the black line (sickly black line) specific to the LPH occurs locally, conduct this adjustment.
Check it when replacing the LPH unit.

Note

- This adjustment is to adjust the optical property of the SELFOC Lens Array (SLA). The SLA whose adjustment is not needed is gray out and cannot be adjusted. (No need to adjust.)
- No need to adjust if the black line does not appear on the test pattern after replacing the LPH unit.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [05 LPH Adjustment].
3. "LPH Adjustment Menu screen"
Press [02 Black Line Restraint Adj.].
4. "Black line restraint adjustment screen"
Select [Dark Gray] or [Light Gray] in "Test Pattern Select".

Note

- Since the appearance differs between the black lines, check with 2 types of [Dark Gray] and [Light Gray].

5. "Black line restraint adjustment screen"
Select [On] in "Line Draw" and press [Print Mode].
6. "PRINT MODE screen"
Set the A4 or 8 1/2 x 11 paper. Press the Start key to output the test pattern.

Note

- When the adjustment value is input, the white lines like in the picture appear. The positions of these white lines show the position where the optical property of the SELFOC Lens Array (SLA) is adjusted.
- When the adjustment value is input, the white lines from 1 (No.1) to 5 (No.5) are output in order. The number varies between the LPH unit.

7. "Black line restraint adjustment screen"
Select [Off] in "Line Draw" and press [Print Mode].
8. "PRINT MODE screen"
Set the A4 or 8 1/2 x 11 paper. Press the Start key to output the test pattern.
Compare the test patterns output with [On] and [Off] in "Line Draw" to check the black line adjustment position.
If the position of the black line on the test pattern output with [Off] in "Line Draw" and the position of the white line on the test pattern output with [On] in "Line Draw" are the same, adjust the point.
9. "Black line restraint adjustment screen"
Press [Set value] of the point to be adjusted.
Change the adjustment value by pressing [-] or [+] following below.
 - 0: No light intensity adjustment
 - 1: Lower the light intensity value 1 (1.0 equivalent)
 - 2: Lower the light intensity value 2 (2.0 equivalent)
 - 3: Lower the light intensity value 3 (3.0 equivalent)
10. "Black line restraint adjustment screen"
Select [Off] in "Line Draw" and output the test pattern.
Check if the black line occurs.
11. Repeat the steps 4 to 10 until an appropriate value is obtained.

5.3.27 LPH Adj. Pattern Select (LPH Adjustment)**(1) Functions**

Switch the light intensity adjustment pattern which decreases the periodic noise in main scan direction caused by the optical property of the SELFOC Lens Array (SLA).

(2) Usage

Usually, do not use this adjustment in the field.
Be sure to select the pattern No.1.

5.3.28 Skew Detection Adjustment (1250/1250P/1052 only)**(1) Functions**

Save the standard value of the paper skew detection to NVRAM board (NRB).

(2) Usage

It has been already adjusted at the factory setting, but conduct the procedure to adjust the paper skew detection volume.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [06 Skew Detection Adjustment].
3. "Skew Detection Adjustment screen"
Press [Print Mode].
4. Select A4 or 8 1/2 x 11 size paper in tray2 and press the start key to output the test pattern.

Note

- Select [75-91g] for the basic weight setting.
- Adjust it on tray2.

5. Check that there is no skew on the output image visually.

Note

- Save the paper skew value of the last copied paper to NVRAM board (NRB).
- Be sure to continue the adjustment until there is no paper skew. The paper skew amount is stored in NRB by going back to the user mode with paper skewed.
- After completion of the adjustment, the adjustment value is displayed on the touch panel.

6. When there is a skew, press [Close].
7. Repeat the steps 3 to 6 until the paper skew is resolved.

8. Set the threshold [1.0%], [0.5%] or [OFF] for each tray from [Tray Setting] - [Skew Detect Set].

(4) Adjustment value confirmation method

1. "Service Mode Menu screen"
Press [04 State Confirmation].
2. "Service Mode Menu screen"
Press [01 I/O Check Mode].
3. "I/O Check Mode screen"
Enter "94" for the check code with the numeric keys.
4. Press the start button.
Press [Next] to see the current value of [Skew Detection Adjustment].
Check that the gap of the adjustment value between the first time and the second time is within -200 to +200.
Conduct the adjustment again if there is no gap between the adjustment values.

5.3.29 Sharpness Offset Adjustment (Quality Adjustment)

(1) Functions

Adjust midpoint of sharpness in User Mode/Quality Adjustment.

(2) Usage

Conduct this adjustment to shift the sharpness image in User Mode/Quality Adjustment to the soft side or the sharp side. To reduce the moire, shift it to the soft side. However, it tends to cause the image blurring.

Note

- This adjustment reflects only to the scanned image.
- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [07 Quality Adjustment]. (1250/1052)
Press [06 Quality Adjustment]. (951)
3. "Quality Adjustment Menu screen"
Press [01 Sharpness Offset Adjustment].
4. "Sharpness Offset Adjustment screen"
Enter a numeric value through the numeric keys as needed and press [Set].
 - Setting range: -5 (soft* reduce moire) to +5 (sharp* increase moire)
 Press [Print Mode].

Note

- Since it is the trade-off between the moire and the image blurring, conduct the adjustment which is suitable for the originals.

5. Select A3 or 11 x 17 paper, place a "test chart" on the original glass, and press Start key.
6. "PRINT MODE screen"
Check the outputted image.
7. Repeat the steps 4 to 6 until an appropriate value is obtained.

5.3.30 Image Distinction Level (Quality Adjustment)

(1) Functions

Adjust the detection ability for the dot area on the original image.

(2) Usage

Conduct this adjustment to change the center value of the text/photo judging function in User Mode/Quality Adjustment.

Note

- The scanned original is judged to text, picture, or dot text by the image processing. The filter to be used is decided according to the result.
- Use this adjustment for raising the judgment precision of the original on which the area is misjudged.
- To widen the judgment area of the picture, adjust it in the user mode.
- This adjustment reflects only to the scanned image.
- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [07 Quality Adjustment]. (1250/1052)
Press [06 Quality Adjustment]. (951)
3. "Quality Adjustment Menu screen"
Press [02 Image Distinction Level].
4. "Image Distinction Level screen"
Press [Print Mode].
5. Select A3 paper, set the original that you want to adjust on the original glass, and press the start button.
6. Dot/Text detection pattern is outputted.
This output pattern shows how the original image is judged.
 - Gray part: Judged as dot

- White part: Judged as picture
 - Black part: Judged as text
7. Press [Close].
 8. "Image Distinction Level screen"
Select the mode that you want to adjust.
Enter a numeric value through the numeric keys as needed and press [Set].
 - [Dot Detect Adjustment]: Adjust the detectability of the dot area on the original image
Range: -5 (reduce dot area) to +5 (increase dot area)
 - [Dot/Text Area Adjustment]: Fine adjust the center position of the dot/text area on the original image
Setting range: -5 (increase the dot area, decrease the text area) to +5 (decrease the dot area, increase the text area)
 9. Repeat the steps 4 to 8 until an appropriate value is obtained.

5.3.31 AE(AES) Adjustment (Quality adjustment)

(1) Functions

Fine adjust the auto density center position.

(2) Usage

Conduct this adjustment to change the center value that is selected with the auto density function in the user mode.

Note

- This adjustment reflects only to the scanned image.
- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not has the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [07 Quality Adjustment]. (1250/1052)
Press [06 Quality Adjustment]. (951)
3. "Quality Adjustment Menu screen"
Press [03 Density Adjustment].
4. "Density Adjustment Menu screen"
Press [01 AE(AES) Adjustment].
5. "AE(AES) Adjustment screen"
Press [Print Mode].
6. Set the original which auto density to be changed on the original glass and press the start key.
7. Press [Close].
8. "AE(AES) Adjustment screen"
Enter a numeric value through the numeric keys as needed and press [Set].
 - Range: -5 (image highlighted) to +5 (background highlighted)
9. Repeat the steps 5 to 8 until an appropriate value is obtained.

5.3.32 Copy Density Adjustment (Quality Adjustment)

(1) Functions

Fine adjust the center position of the scan density for each quality mode.

(2) Usage

Conduct this adjustment to change the center value of the density setting function in user mode.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not has the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [07 Quality Adjustment]. (1250/1052)
Press [06 Quality Adjustment]. (951)
3. "Quality Adjustment Menu screen"
Press [03 Density Adjustment].
4. "Density Adjustment Menu screen"
Press [02 Copy Density Adjustment].
5. "Copy Density Adjustment screen"
Select the quality mode that you want to adjust and press [Print Mode].
6. Set the test chart on the original glass, and press the start button.
7. Press [Close].
8. "Copy Density Adjustment screen"
Enter a numeric value through the numeric keys as needed and press [Set].
 - Range: -5 (lighter) to +5 (darker)
9. Repeat the steps 5 to 8 until an appropriate value is obtained.

5.3.33 BackgroundRemoval (Quality Adjustment)

(1) Functions

Fine adjust the center position of the background for each quality mode.

(2) Usage

Conduct this adjustment to change the intensity of the background adjustment function in user mode.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [07 Quality Adjustment]. (1250/1052)
Press [06 Quality Adjustment]. (951)
3. "Quality Adjustment Menu screen"
Press [03 Density Adjustment].
4. "Quality Adjustment Menu screen"
Press [03 Background Removal].
5. "BackgroundRemoval screen"
Enter a numeric value through the numeric keys as needed and press [Set].
 - Range: -5 (background highlighted) to +5 (background fogged)

5.3.34 CCD Right and Left Quality Adjustment (Quality Adjustment)**(1) Function**

Adjust the sampling timing of the CCD output to adjust the density gap between backward and forward (in the main scan direction) against the optical axis of lens.

(2) Usage

Because of the variations of parts accuracy of the CCD unit, the image density against the optical axis of lens may differ between backward and forward (in the main scan direction). Therefore, perform this adjustment when there is a density gap between backward and forward at the center of the main scan direction on the copied paper after replacing the CCD unit.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not has the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [07 Quality Adjustment]. (1250/1052)
Press [06 Quality Adjustment]. (951)
3. "Quality Adjustment Menu screen"
Press [04 CCD Right-Left Quality].
4. "CCD Right-Left Quality screen"
Press [Print Mode].
5. Select A3 or 11 x 17 paper, and set the test chart on the original glass. Press the Start button.
6. Fold the output paper at the center of the main scan direction, and check that there is no density gap between backward and forward.
7. When there is a skew, press [Close].
8. "CCD Right-Left Quality screen"
Select [Crosswise Dir. (Front)] to equalize the density.

Note

- There are 2 types for the adjustment; "Crosswise Dir. (Front)" and "Crosswise Dir. (Back)". Be sure to execute the adjustment with "Crosswise Dir. (Front)".

Enter a numeric value through the numeric keys and press [Set].

- Setting range: -16 to +16
9. Repeat the steps 4 to 8 until an appropriate value is obtained.

5.3.35 Distortion Adjustment**(1) Functions**

Adjust the image distortion in scanning.

(2) Usage

Conduct this adjustment when the image distortion occurs in scanning.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not has the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [08 Distortion Adjustment]. (1250/1052)
Press [07 Distortion Adjustment]. (951)
3. "Distortion Adjustment screen"
Select the item that you want to adjust and press [Print Mode].
4. Select A3 or 11 x 17 paper. Set the "test chart" at the position (original glass or ADF) according to the adjusted item, and press the Start Key.
5. Measure the image distortion with a scale.

- Standard value: $\pm 0.5\%$ or less (difference in the diagonals of 200mm square must be 1.4mm or less)
- 6. When the value is not within the standard value, press [Close].
- 7. "Distortion Adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -50 (counterclockwise) to +50 (clockwise)
 - 1 Step = 0.05%
- 8. Repeat steps 3 to 7 until the standard value can be obtained.

5.3.36 Non-Image Area Erase Check

(1) Functions

Check the non-image area erase function and automatically adjust the sensitivity to detect the non-image area.

(2) Usage

Conduct this adjustment when installing the copier, moving its installation location, or when the non-image area erase function does not work satisfactorily.

(3) Preparation

Open fully the DF.
Do not put anything on the original glass.
Clean the original glass.

Note

- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.

(4) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [09 Non-Image Area Erase Check].(1250/1052)
Press [08 Non-Image Area Erase Check]. (951)
3. "Non-Image Area Erase check screen"
Press [Start].
4. Make sure that the following message appears.
NORMAL adjustment selected.
The machine is set to appropriate parameters for Non-image area erase.
If any other message appears, refer to " ", and perform the non-image area erase check again.[I.5.3.36.\(5\) Error message and Handling](#)

(5) Error message and Handling

If an error is detected while performing the "Non Image Area Erase Check" mode, the following error message is displayed.

(a) Error message1

Adjust for Extreme Brightness.
Non-Image Area Erase function may not operate correctly with dark (density) original.
Please refer to [ADJUSTMENT/SETTING]-[Machine Adjust] columns of the Service Manual.

Handling 1

If the use of the non-image area erase function or the case of copying originals that have a dark background is not frequently, the copier can be used in the current installation location. However, when copy originals that have a dark background are frequently copied, install the copier in a location where less external light gets in (darker) than the present location, and check the non-image area erase check mode again.

(b) Error message2

Adjust for Extreme Brightness. In many cases, the Non-Image Area Erase function will not operate correctly.
Please refer to [ADJUSTMENT/SETTING]-[Machine Adjust] columns of the Service Manual.

Handling 2

When the non-image area erase function is not used frequently, the copier can be used in the current installation location. However, if the non-image area erase function is frequently used, install the copier in a location where less external light gets in (darker) than the present location, and check the non-image area erase check mode again. At this time, when there is a bright light source such as a fluorescent light installed directly above the machine, reconsider the installation location, or take some measures to shield the light source and check the mode again.

5.3.37 ADF Density Adjustment (ADF Adjustment)

(1) Functions

Adjust the sensitivity for ADF reading.

(2) Usage

Since the slit glass of the scanning section is coated with electrical conductive material, the way it refracts light from the exposure lamp is different from the way of the original glass. Thus, perform this adjustment when replacing the slit glass.

(3) Preparation

Clean the slit glass.

Make sure that the white chart is not dirty. (Partial dirt can be ignored)

Note

- **This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.**

(4) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [10 ADF Adjustment]. (1250/1052)
Press [09 ADF Adjustment]. (951)
3. "ADF Adjustment Menu screen"
Press [01 Density Adjustment].
4. "ADF Density Adjustment screen"
Set the "white chart" on the DF.

Note

- **Set the "white chart" in the A4-direction.**

5. Press [Start].
The white chart is scanned, and density is automatically adjusted.
6. After the density adjustment, the adjustment value is displayed. When an error message appears, turn OFF/ON the sub power switch (SW2) of the main body. Repeat steps 1 to 5 until it is completed properly.

5.3.38 ADF Original Size Adj. (ADF Adjustment)**(1) Functions**

Adjust the original size in setting the original on ADF.

(2) Usage

Conduct this adjustment when the original size detection does not work properly.

Note

- **This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.**

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [10 ADF Adjustment]. (1250/1052)
Press [09 ADF Adjustment]. (951)
3. "ADF Adjustment Menu screen"
Press [02 ADF Original Size Adj.].
4. "ADF Original Size Adj. screen"
Make sure A4 is selected and set A4 paper on the ADF and press [Start].
5. "ADF Original Size Adj. screen"
Confirm the message of completion, press [B6].
6. "ADF Original Size Adj. screen"
Set B6S paper on the ADF and press [Start].
7. "ADF Original Size Adj. screen"
Confirm the message of completion, press [Print Mode].
8. Make sure the ADF original size is properly detected.

5.3.39 ADF Sensor Sensitivity Adj. (ADF Adjustment)**(1) Functions**

Adjust the sensor sensitivity of DF.

(2) Usage

Conduct this adjustment when a malfunction (JAM display does not disappear despite no paper JAM) occurs in the reflective type sensors.

(3) Preparation

Clean each of the ADF reflective sensors.

Note

- **This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.**

(4) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [10 ADF Adjustment]. (1250/1052)
Press [09 ADF Adjustment]. (951)
3. "ADF Adjustment Menu screen"
Press [03 ADF Sensor Sensitivity Adj.].
4. "ADF sensor sensitivity adjustment screen"

Press [Start].

The DF sensor sensitivity is automatically adjusted, and the message of completion appears.

5. Press [Print Mode] to check to see if there is any malfunction.
6. When malfunction is found, press [Close] to repeat steps 5 and 6.
7. Press [Return] to return to "ADF Adjustment Menu screen"

5.3.40 ADF Skew Offset Adj. (ADF Adjustment)

(1) Functions

Adjust image skew in the DF scanning mode.

(2) Usage

Conduct this adjustment when the image skew occurs in the DF scanning mode.

Note

- This adjustment is reflected on the skew adjustment control in DF scanning mode.
- This adjustment is for 1250/1052/951 (copier version). 1250P (printer version) does not have the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [10 ADF Adjustment]. (1250/1052)
Press [09 ADF Adjustment]. (951)
3. "ADF Adjustment Menu screen"
Press [04 ADF Skew Offset Adj.].
4. "ADF Skew Offset Adjustment screen"
Press [Print Mode].
5. Set the "adjustment chart" on the ADF and press the Start Key.
6. Measure the image skew with a scale.
 - Standard value: within $\pm 0.5\%$
The gap between a and b is 2.1mm or less

7. When the value is not within the standard value, press [Close].
8. "ADF Skew Offset Adjustment screen"
Enter a numeric value through the numeric keys and press [Set].
 - Range: -60 (counterclockwise) to +60 (clockwise)
 - 1 Step = 0.05%
9. Repeat steps 4 to 8 until the standard value can be obtained.
10. Press [Return] to return to "ADF Adjustment Menu screen"

5.3.41 ADF Centering Sensor Adjustment (ADF Adjustment) (1250/1052 only)

(1) Functions

Adjust sensitivity of the centering sensor /Fr.

(2) Usage

When there is a mis-centering on the scanned image, conduct this adjustment.

Note

- Be sure to conduct adjustment for both A4 and 8 1/2 x 11.
- This adjustment is for 1250/1052 (copier version). 1250P (printer version) and 951 do not have the adjustment method.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [10 ADF Adjustment].
3. "ADF Adjustment Menu screen"
Press [05 ADF Centering Sensor Adj.].
4. "ADF Centering Sensor Adjustment screen"
Select "A4".
5. Remove the screw [1] and remove the sensor cover [2].

1050fs3022c

6. Remove 1 screw [1] to place the sensor mounting plate [2] to the "A4" side [3] impress, the 2 locating projections [4] to their places.

1050fs3023c

7. "ADF Centering Sensor Adj. screen"
Press [Start]. Sensitivity of the sensor is adjusted, and message of completion is displayed.
8. Select $8\frac{1}{2} \times 11$.
9. Remove 1 screw [1] to place the sensor mounting plate [2] to the "LT" side [3] impress, the 2 locating projections [4] to their places.

1050fs3024c

10. "ADF Centering Sensor Adj. screen"
Press [Start]. Sensitivity of the sensor is adjusted, and message of completion is displayed.
11. Replace the sensor plate to the position of original size ($A4$ or $8\frac{1}{2} \times 11$) that the customer mainly uses.

5.3.42 Recall Standard Data

(1) Functions

Reset the adjustment values of the machine adjustment to the factory initial data or the installation initial data.

(2) Usage

The same adjustment table is changed since some parts of the machine adjustment can be changed by the user. Therefore, conduct this adjustment when the adjustment values cannot be initialized because of the erroneous operation by the user.

(3) Procedure

1. "Service Mode Menu screen"
Press [01 Machine Adjustment].
2. "Service Mode Menu screen"
Press [11 Recall Standard Data]. (1250/1250P/1052)
Press [10 Recall Standard Data]. (951)
3. "Recall standard data: Machine adjustment screen"
Press [Factory Initial Data] or [Installation Initial Data].

Note

- Selecting [Factory Initial Data] recalls the factory initial data.
- Selecting [Installation initial data] recalls the adjustment values stored when code "91" of the I/O check mode was conducted.
- When selecting [Data at shipment] or [Data at installation], the data returns with no display changed on the screen.

4. Press [Yes] to restore standard data.
Press [No] to cancel the operation.

5.4 Process adjustment**5.4.1 High Voltage Auto Adjustment (High Voltage Adjustment)****(1) Functions**

Current values and voltage values of a transfer current and developing bias are automatically adjusted respectively.

(2) Usage

Conduct this adjustment when the high voltage units /1 and /2 (HV1, 2) are replaced.

(3) Preparation

The photo conductor section must be set.

(4) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [01 High Voltage Adjustment].
3. "High Voltage Adjustment Menu screen"
Press [01 High Voltage Auto Adjustment].
4. "HV Adjustment (Auto adjustment) screen"
Press [Start]. After the automatic adjustment, the message of completion appears.

Note

- When an error message appears during the adjustment, check to see if the error unit is properly installed and cleaned. Conduct the adjustment again.

5.4.2 HV Adjustment (Charge) (High Voltage Adjustment)

Do not conduct this adjustment in the field.

5.4.3 HV Adj. (Charg grid voltage) (High Voltage Adjustment)

Do not conduct this adjustment in the field.

5.4.4 HV Adj. (Bias Development) (High Voltage Adjustment)

Do not conduct this adjustment in the field.

5.4.5 Transfer Manual Adj. (High Voltage Adjustment)

Do not conduct this adjustment in the field.

5.4.6 Trans belt M-Brush Current (High Voltage Adjustment)

Do not conduct this adjustment in the field.

5.4.7 Trans belt M-Brush Current (High Voltage Adjustment)

Do not conduct this adjustment in the field.

5.4.8 Discharge Before Cleaning (High Voltage Adjustment)

Do not conduct this adjustment in the field.

5.4.9 Blade Setting Mode (Drum Peculiarity Adjustment)

(1) Functions

Apply toner to the cleaning blade and drum to prevent the damage.

(2) Usage

Perform this adjustment when changing the cleaning blade.

Note

- **Perform this process only after changing the cleaning blade. Otherwise, the cleaning blade special parts counter is reset, thus making it impossible to implement the auto blade change in the right timing.**
- **Apply setting powder to the cleaning blade and drum.**

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [02 Drum Peculiarity Adjustment].
3. "Drum Peculiarity Adjustment Menu screen"
Press [01 Blade Setting Mode].
4. "Blade setting mode screen"
Press [Start].
5. "Blade setting mode screen"
"Is cleaning blade exchanged?" is displayed. Then press [Yes]. With toner applied, the drum is cleaned with the cleaning blade. The message of completion appears.

5.4.10 Charge Potential Auto. Adj. (Drum Peculiarity Adjustment)

(1) Functions

It measures the photo conductor charging potential and automatically adjusts the charging current, the grid voltage, and the developing bias respectively.

(2) Usage

Conduct this adjustment when replacing the drum.

Conduct this adjustment when replacing the high voltage unit /1, /2 (HV /1, /2).

Adjust it when replacing the LPH unit.

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [02 Drum Peculiarity Adjustment].
3. "Drum Peculiarity Adjustment Menu screen"
Press [02 Charge Potential Auto. Adj.].
4. "Charge Potential Automatic Adjustment screen"
Press [Start]. After the automatic adjustment, the message of completion appears.

Note

- **When the following error messages appear, check to see if the drum potential sensor (DPS) is properly installed and cleaned. Conduct the adjustment again.**
 - 1) Error 1
In the 0V check of the DPS, voltage over 100V is detected 5 times or more.
 - 2) Error 2
The drum potential after laser exposure is detected to be over 350V, and it is determined that control patch detect signal is not output.
 - 3) Error 3
Drum potential has been corrected 10 or more times, but it does not converge.

5.4.11 Toner Density Sensor Init. (Drum Peculiarity Adjustment)

(1) Functions

Adjust TCR (Vc) with the new developer when replacing the developer.

TCR sensor (TCRS) measures the developer permeability in the developing unit and it memorizes the value with which the TCR sensor output voltage gets to the standard value into the NVRAM board (NRB).

(2) Usage

Conduct this adjustment when replacing the developer.

Note

- **Be sure not to print without conducting the toner density sensor initial auto adjustment after replacing the developer. Without the adjustment, the developer has to be replaced again since the proper image density cannot be provided.**
- **When conducting the auto toner density sensor initial adjustment, the developer counter in the maintenance counter is reset automatically.**

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"

Press [02 Drum Peculiarity Adjustment].

3. "Drum Peculiarity Adjustment mode menu screen"

Press [03 TonerDensitySensorInit.Auto].

4. "TonerDensitySensorInit.Auto screen"

Press [Start].

5. "TonerDensitySensorInit.Auto screen"

"Is developer exchanged?" is displayed. Then, press [Yes]. After the Auto Adjustment, the message of completion appears.

Note

- **When the following error messages appear, follow the solution.**
 1. **Error 5**
- Solution
 1. Check the connector connection of the TCR sensor (TCRS).
 2. Check the developer centering in the Developing unit.
 3. Check the coupling tally of the Developing unit.
 4. Check the connector connection of the sensitive drum section and the Main Body.
 5. Check the connection status between the TCR sensor (TCRS) and the printer control board (PRCB).
 6. Replace the TCR sensor (TCRS) or the printer control board (PRCB).

5.4.12 Sensitive Drum Set Mode (Drum Peculiarity Adjustment)

(1) Functions

Put the lubricant to the photo conductor to keep the cleaning ability.

(2) Usage

Conduct this adjustment when replacing the photo conductor.

Note

- **When conducting the photo conductor set mode, the photo conductor counter in the maintenance counter is reset automatically.**
- **Perform cleaning process for the IDC sensor before conducting sensitive drum set mode.**

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [02 Drum Peculiarity Adjustment].
3. "Drum Peculiarity Adjustment Menu screen"
Press [04 Sensitive Drum Set Mode].
4. "Photo conductor setting mode screen"
Press [Start].
5. "TonerDensitySensorInit.Auto screen"
"Is sensitive drum exchanged?" is displayed. Then, press [Yes]. After the Auto Adjustment, the message of completion appears.

5.4.13 Auto Maximum Density Adj. (Drum Peculiarity Adjustment)

(1) Functions

Automatically adjust the maximum density that is suitable for the drum.

(2) Usage

Conduct this adjustment when replacing the drum, developer, and LPH unit.

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [02 Drum Peculiarity Adjustment].
3. "Drum Peculiarity Adjustment mode menu screen"
Press [05 Auto Maximum Density Adj.].
4. "Auto maximum Density Adjustment screen"
Press [Start]. After the automatic adjustment, the message of completion appears.

Note

- **When the following error messages appear, check to see if the toner control board (TCB) is properly installed and cleaned. Conduct the adjustment again.**
 - 1) **Error 1**
The maximum density sensor (on the TCB) dirt correction has been corrected or more times, but it does not converge.
 - 2) **Error 2**
The auto maximum density adjustment is not completed, when the developing roller rotation speed reaches the specified value.
 - 3) **Error 3**
No signal is output from the maximum density sensor. Control patch detect signal is not output.

5.4.14 Auto Dot Diameter Adj. (Drum Peculiarity Adjustment)

(1) Functions

Automatically adjust the dot diameter of laser beam that is suitable for the drum.

(2) Usage

Conduct this adjustment when replacing the drum or LPH unit.

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [02 Drum Peculiarity Adjustment].
3. "Drum Peculiarity Adjustment mode menu screen"
Press [06 Auto Dot Diameter Adj.].
4. "Auto dot diameter adjustment screen"
Press [Start]. After the automatic adjustment, the message of completion appears.

Note

- **When the following error messages appear, check to see if the toner control board (TCB) is properly installed and cleaned. Conduct the adjustment again.**
 - 1) Error 1
The gamma sensor (on the TCB) dirt correction has been corrected or more times, but it does not converge.
 - 2) Error 2
The auto dot diameter adjustment completed with an abnormal value.

5.4.15 Cartridge Set Mode (Drum Peculiarity Adjustment)**(1) Functions**

Agitate the recycle toner that is back to the developer to prevent the overflow toner to the conveyance section.

(2) Usage

Conduct this adjustment when black spots (toner) appear on the print-out after removing/inserting the photo conductor section.

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [02 Drum Peculiarity Adjustment].
3. "Drum Peculiarity Adjustment mode menu screen"
Press [07 Cartridge Set Mode].
4. "Cartridge set mode screen"
Press [Start]. The development unit and the drum rotate for 3 minutes to charge low-charge toner.
5. After the rotation stops, press [Print Mode].
6. Select the A3 or 11 x 17 paper. Press the Start button to output 10 blank papers, thus cleaning the drum.
7. When the black spot does not disappear, press [Close] to repeat steps 4 to 6.

5.4.16 Blade Replace Mode (Drum Peculiarity Adjustment)**(1) Functions**

Automatically replace from the 1st cleaning blade to the 2nd cleaning blade.

(2) Usage

When the image error occurs because of the cleaning blade, conduct this mode to prevent the image error.

Note

- **When it has been switched to the 2nd cleaning blade, this mode is not available.**
- **By conducting this mode, the periodically replaced timing of the cleaning blade gets faster.**

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [02 Drum Peculiarity Adjustment].
3. "Drum peculiarity adjustment screen"
Press [08 Blade Setting Mode].
4. "Blade Replace Mode screen"
Press [Start].

Note

- **When [Start] is disabled, the 2nd cleaning blade is set.**
- **To enable [Start], execute [Blade Setting Mode] after replacing the 2nd cleaning blade.**

5. "Blade Replace Mode screen"
When the mode completes, "Blade replace mode Completed" appears.

5.4.17 Default Density Setting (Drum Peculiarity Adjustment)**(1) Function**

Fine adjust the standard density in the printer engine.

(2) Usage

Use to stabilize the maximum density and to reduce the toner consumption.

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [02 Drum Peculiarity Adjustment].
3. "Drum Peculiarity Adjustment mode menu screen"
Press [09 Default Density Setting].
4. "Default Density Setting screen"
Enter a numeric value through the numeric keys as needed and press [Set].
 - Adjustment range: -5(lighter) to +3 (darker)
5. Press [Stabilize Image].

Note

- When changing the setting data, be sure to press [Stabilize Image]. In other way, the changed data is not reflected to the control.

5.4.18 Drum Peculiarity Manual

Do not conduct this adjustment in the field.

5.4.19 Recall Standard Data**(1) Functions**

Reset the adjustment values of the process adjustment to the factory initial data or the installation initial data.

(2) Usage

Conduct this adjustment when the initialization cannot be done because of the various change by CE.

Note

- In case the data recovery is conducted, the developer needs to be replaced since the value of "TonerDensitySensorInit.Auto" is recovered to the initial value or the installation value.

(3) Procedure

1. "Service Mode Menu screen"
Press [02 Process Adjustment].
2. "Service Mode Menu screen"
Press [04 Recall Standard Data].
3. "Recall Standard Data (Process adjustment) screen"
Press [Factory Initial Data] or [Installation Initial Data].

Note

- Selecting [Factory Initial Data] recalls the factory initial data.
- Selecting [Installation Initial Data] recalls the adjustment values stored when code "91-00" of the I/O check mode was conducted.
- When selecting [Data at shipment] or [Data at installation], the data returns with no display changed on the screen.

4. Press [Yes] to restore standard data.
Press [No] to cancel the operation.

5.5 Counter/Data**5.5.1 Maintenance Counter****(1) OUTLINE**

Reset the PM Counter and set the cycle and set the cycles of Developer Counter and OPC Drum Counter.

Note

- For the PM Counter, Developer Counter, and OPC Drum Counter, the counts are made 1 count for simplex and 2 counts for the duplex of small-size paper, 2 counts for the simplex and 4 counts for the duplex of large-size paper.

(2) Counter reset

Reset the PM counter.

Note

- Be sure to reset the PM counter when the periodic maintenance (every 1,000,000 prints for 1250/1250P/1052, every 750,000 prints for 951) is performed.
Otherwise, the periodic check alert message and icon do not disappear.

(a) Procedure

1. "Service Mode Menu screen"
Press [03 Counter/Data]
2. "Service Mode Menu screen"
Press [01 Maintenance Counter].
3. "Maintenance Counter/Cycle screen"
Press [PM Cycle] and then press [Counter Clear].
4. "Reset confirm screen"
Press [Yes] to reset the counter.

The counter is reset, and the start date is automatically inputted.
Press [No] not to reset the counter. It returns to the "Maintenance Counter/Cycle screen".

5. "Maintenance Counter/Cycle screen"

Pressing [OK] validates resetting. Pressing [Cancel] invalidates the counter reset.

(3) PM cycle

Configure settings of the PM cycle, developer cycle and drum cycle.

Note

- The PM cycle, developer cycle and drum cycle are already inputted in the initial settings. Usually, do not change these settings.

(a) Procedure

1. "Service Mode Menu screen"
Press [03 Counter/Data]
2. "Service Mode Menu screen"
Press [01 Maintenance Counter].
3. "Maintenance Counter/Cycle screen"
Press one of the [PM Cycle], [Developer], and [Sensitive Drum] that you want to set.
4. "Maintenance Counter/Cycle screen"
Enter the high order digits of the cycle value through the numeric key.
[PM Cycle]: Upper 5 digits
[Developer]: Upper 5 digits
[Sensitive Drum]: Upper 5 digits
5. "Maintenance Counter/Cycle screen"
Pressing [OK] returns you to the "Service mode menu screen."
Press [Cancel] to cancel the operation.

5.5.2 Collection Data

The following data held in the machine can be displayed on the operation panel.

It is also possible to confirm collected data by the CS Remote Care, list output and the mail remote notification system.

- Paper Size Counter (Total)
- Paper Size Counter (Copy)
- Paper Size Counter (Printer)
- Large Size Counter
- ADF Counter
- Coverage Data History
- Coverage Ranking List
- Paper JAM History*¹
- JAM Counter*¹
- Counter of Each Copy Mode*¹
- SC Data of Time Series*¹
- SC Counter*¹
- JAM Counter Individual Sec.*¹
- SC Count Individual Sec.*¹
- Counter of Each Paper Type*¹
- Maintenance History
 - Parts History in Time Series
- ORU-M Maintenance History*²

*¹ When setting DIPSW 30-1 from "0" to "1", these data can be confirmed.

*² 1250/1250P/1051 only. It is available when DIPSW 15-0 is set from "0" to "1".

(1) Procedure

1. "Service Mode Menu screen"
Press [03 Counter/Data]
2. "Service Mode Menu screen"
Press [02 Collection Data].
3. "Collecting Data Menu screen"
Press the collection data item key you want to confirm.
4. "Individual data confirmation screen"
Press [Next] or [Previous] to scroll the screen.

Note

- [Counter Clear] is displayed on each screen of [13 JAM Counter Individual Sec.] and [14 SC Counter Individual Sec.].
A screen to confirm the count reset appears when [Counter Clear] is pressed. Press [Yes] to reset the sectional count.
Pressing [No] returns to "Individual data confirmation screen" with the interval data not reset.
Reset these data while in the PM implementation to confirm the jam or SC occurrence count after it was visited last time.

5.5.3 Paper Size Counter (Total/copy/printer counter)

Confirm the number of printings of each paper size.

Note

- Maximum count: 99,999,999
- For the CSRC parameter, P1 stands the total counter, P2 stands the copy counter, and P6 stands the printer counter.
- Regardless of the paper size, 1 count for the simplex and 2 counts for the duplex.
- The items other than No.02 to No.32 are all counted as No.01 Others.

- Wide paper is counted as the basic standard.
- Blank such as Insert Sheet or back side of the duplex odd page is not counted.

No.	CSRC parameter (P1, P2, P6)	Paper Size	Remark
01	00	Others	
02	01	A3	
03	02	A4S	
04	03	A5	
05	04	A6	Not used
06	05	B4	Including ISO-B4
07	06	B5S	Including ISO-B5
08	07	B6	Not used
09	08	12 x 18	
10	09	11 x 17	
11	0A	8 ¹ / ₂ x 14

31	1E	B5	
32	1F	8 ¹ / ₂ x 11	

5.5.4 Large Size Counter

Confirm the number of printings of the large-size paper.

Note

- Maximum count: 99,999,999
- Definition of the large size can be changed by DIPSW10-3/ 4 (A3, 11 x 17, 12 x 18 for default).

No.	CSRC command (Parameter)	Item	Remark
01	BI (00)	Large-size printer counter	DIPSW10-3, 4 decides the definition of the large size.
02	BH (00)	Large-size copy counter	
03	F6 (01)	Large-size scan counter	

5.5.5 ADF Counter

Confirm the number of originals fed in each ADF mode.

Note

- Maximum count: 99,999,999
- Number.1, 2 are not counted as Number.3 to 8.

No.	CSRC parameter (F0)	Item	Remark
1	00	N of originals fed in ADF mode	Simplex Mode
2	01	N of originals fed in RADF mode	Duplex Mode
3	02	N of originals fed in RDH simplex mode	Not used
4	03	N of originals fed in RRDH duplex mode	Not used

No.	CSRC parameter (F0)	Item	Remark
5	04	N of originals fed in LDF mode	Not used
6	05	N of originals fed in CFF mode	Not used
7	06	N of 1-sided SDF original fed	Single Feed mode
8	07	N of 1-sided mixed original fed	Mixed original mode
9	08	N of 2-sided mixed original fed	Mixed original mode
10	09	N of originals fed in 2 in 1 mode	Not used
11	0A	N of 1-sided Z-Folded original fed	Z-Folded original mode
12	0B	N of 2-sided Z-Folded original fed	Z-Folded original mode
13	0C	N of 2-sided SDF original fed	Single Feed mode

5.5.6 Coverage Data History

With 5,000 prints as one data, the coverage (original B/W ratio) and the total accumulation are displayed.

Note

- This coverage is a calculated value based on the colored area and the transfer paper area, and is different from the toner consumption when actually printed.
- Up to 30 most recent coverage data are stored and deleted in chronological order.

No.	CSRC Parameter (V0)	Print count	Coverage (%)
1	00	Total count	(00.0 to 99.9%)
2	01	Print count 1	
3	02	Print count 2	
4	03	Print count 3	
5	04	Print count 4	
6	05	Print count 5	
7	06	Print count 6	
8	07	Print count 7	
9	08	Print count 8	
10	09	Print count 9	
11	0A	Print count 10

27	1A	Print count 26	
28	1B	Print count 27	
29	1C	Print count 28	
30	1D	Print count 29	
31	1E	Print count 30	

5.5.7 Coverage Ranking List

Confirm the data of the 15 higher order jobs in the order of the higher coverage (original B/W ratio).
To exclude faulty operations (skyshot) by a user, display only data for continuous 5 or more print-outs.

Note

- The coverage data is a calculated value based on the colored area and the transfer paper area of the image data. Therefore, it is different from the toner consumption when actually printed.

No.	CSRC Parameter (V1)	Coverage (%)	Print Quantity	Paper size	Mode	Date
01	00	00.0 to 99.9%	Displaying the number of papers		Copier or Printer	
02	01					
03	02					
04	03					
05	04					
06	05					
07	06					
08	07					
09	08					
10	09					
11	0A					
12	0B					
13	0C					
14	0D					
15	0E					

5.5.8 Time series jam data

With respect to the latest 100 jam data, it is possible to confirm jam code, total counter, date of occurrence, time of occurrence, tray, paper size, and magnification.
(except idling JAM.)

5.5.9 Jam Counter/Jam Counter Individual Sec.

Confirm the JAM occurrence count for each JAM code (except idling JAM)

Note

- **Maximum count: 999,999**
- **The jam code is a code displayed when DIPSW11-7 is set to 1.**

No.	CSRC Parameter (J0, J1)	Item Jam code

251	02	Staple Pitch Narrow (140 mm)	1 count for 1-Sided exit, 2 counts for 2-Sided exit
252	03	Staple Pitch Narrow+ (120 mm)	1 count for 1-Sided exit, 2 counts for 2-Sided exit
253	04	Folder Tray Output	1 count for 1-Sided exit, 2 counts for 2-Sided exit
254	05	Folder Tray Job Number	Number of JOB
255	06	Folder Tray Full Alarm	Times of occurrence
256	09	Water Tank Empty	Times of occurrence

5.5.12 SC data of time series

With respect to the latest 20 SC, confirm SC code, total counter, date of occurrence, time of occurrence and machine condition (00: Idling, 01: Scanner operating, 02: Printer operating, 03: Scanner and printer operating).

5.5.13 SC Counter/SC Counter Individual Sec.

Check the number of occurrence of abnormality for each error code.

Note

- **Maximum count: 9,999**
- **When the service mode DIPSW3-1 is 1 (Latched), C-35xx, 38xx, 39xx, 1540 to 1562, 2214 and 2217 are not counted.**

5.5.14 Counter of Each Paper Type

Check the number of originals that is fed for each paper type and weight.

Note

- **Maximum count: 99,999,999**
- **For each type of paper specified in the tray setting, small size paper is 1 count for each paper exit of the single side and 2 counts of the double side, large size paper is 2 counts for the single side and 4 counts for the double side.**

5.5.15 Parts History in Time Series (Maintenance History)

(1) Usage

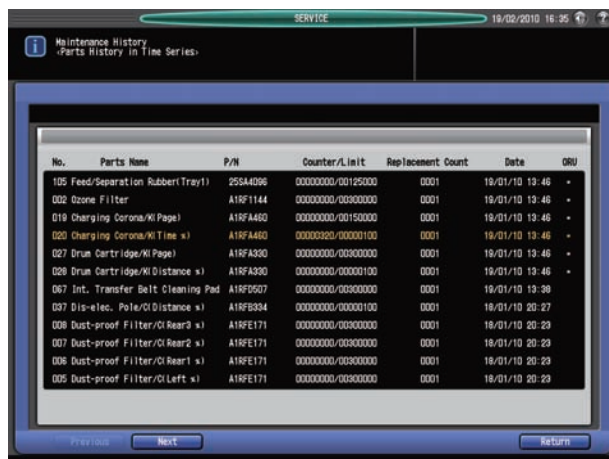

Check the maintenance frequency for respective parts.

(2) Specifications

- The latest 50 items of the maintenance counter reset history is displayed.
- Item
 - No.
(Number of the special parts counter)
 - Parts Name
 - P/N
 - Counter/Limit
 - Replacement count
 - Date
 - ORU
(The mark "***" means that the part is replaced in the ORU-M mode.)

(3) Confirmation steps of Parts History in Time Series

- "Collecting Data Menu screen"
Press [16 Maintenance History].
- "Maintenance History Menu screen"
Press [01 Parts History in Time Series].
- "Maintenance History<Parts History in Time Series> screen"
Check the special parts counter reset history.

5.5.16 ORU-M Maintenance History (1250/1250P/1052 only)

(1) Usage

Check the frequency of unit replacement, then predict the timing of replacing the ORU-M target part and collect each type of information.

(2) Specifications

Item

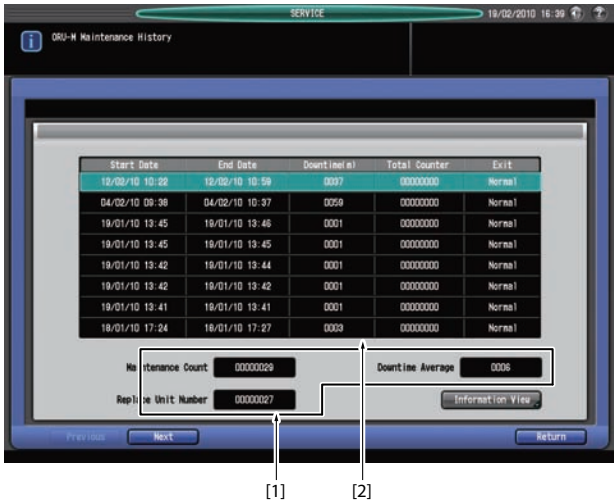

- Information of ORU-M maintenance history:
Unit replacing Start/End date and time, Downtime (m), Total Counter, End Status (Normal, error)
- Information of each ORU-M maintenance unit:
Parts Name, P/N, Serial Number, Life Cycle, Replacement Count, Replace Reason (Periodical Replacement, Image Trouble, Transport Trouble/JAM)
- Information of total ORU-M maintenance:
Maintenance Count, Replace Unit Number, Downtime Average

Maximum storable number

- The data of the latest 125 replacements of the ORU-M corresponding unit are stored.
When one of the ORU-M counters is reset, up to 125 data including the latest replacement date and the replaced unit information are stored.
Example
When replacing 4 units at a maintenance, the data of latest 25 maintenances can be stored.
(Maintenance date (1 item to be stored) + 4 units replaced (4 items to be stored) = 5 items to be stored
With this function, the following items can be checked.
Name of replaced unit
Part No. (P/N)
Life cycle
Replacement Count
Replace Reason (PM, CM (image quality), CM (machine broken))
- The down time of the latest 50 units are stored.
Measures the length of time from when entering the ORU-M replacement screen to when exiting it.
Up to 50 data (time taken for replacement and replacement date) of each ORU-M corresponding unit are stored. The data older than that are stored as averaged value.

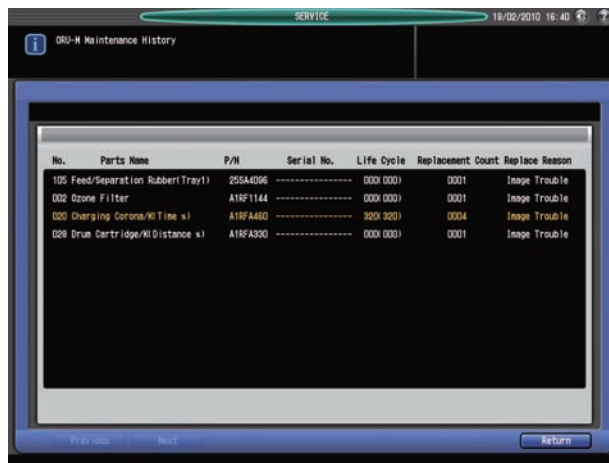

(3) ORU-M maintenance history check procedures

1. "ORU-M Maintenance History screen"
Check the ORU maintenance history.

[1] Information of ORU-M total maintenance history:	[2] ORU-M maintenance history information
--	--

2. To check the object unit of each maintenance, select the maintenance to display and then press [Information View].
3. "Information View screen"
Check the maintenance of each unit.

5.5.17 Checking, setting and resetting procedure of the Special Parts Counter

When a part is replaced, reset the counter of the part that has been replaced to manage the service history.

(1) Procedure

1. "Service Mode Menu screen"
Press [03 Counter/Data]
2. "Service Mode Menu screen"
Press [03 Parts Counter].
3. "Parts Counter Menu screen"
Press [01 Special Parts Counter].
4. "Parts Counter <Special Parts Counter> screen"
Press [Next] or [Previous] to scroll the screen.
Press [▲] or [▼] to select an item you want to reset.
5. Press [Counter Clear].
6. "Reset confirm screen"
Press [Yes] to reset the counter.
Press [No] not to reset the counter. You return to the "Parts Counter <Special Parts Counter> screen."

5.5.18 Special Parts Counter (951)

Note

- Be sure to reset the fusing cleaning web counter (Number.046) after replacing the cleaning web. Otherwise, fuser cleaning trouble occurs.
- Be sure to perform the blade set mode of the service mode after replacing the cleaning blade. This operation automatically resets the cleaning blade counter (No. 032, 033). Otherwise, the auto blade replacement cannot be implemented.
- Maximum count: 99,999,999

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
001	00	Charging filter	A4EU1181	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.

011	15	Developing suction seal*1	A4EU3946 A4EU3947 A0G63944	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
			A0G63945 56UA3103 56UA3106	those sizes, 1 count for the single and 2 counts for the double.
012	16	Developing unit	A4EUA370	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
013	17	Suction unit	A4EUA390	
014	1A	Stirring plate assy	A4EUA401/A4EUB409	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
015	1B	Toner supply sleeve /1	A4EUB402	
016	1C	Toner supply sleeve /2	A4EUB403	
017	1D	Toner pump /1	A4EUB420	1 count for each paper exit in the single side mode, 2 counts in the double side mode.
018	1E	Toner pump /2	A4EUB440	
019	22	Guide blade unit	A4EUA526	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
020	23	Transfer belt	A0G65001	
021	24	Transfer roller	A4EU5006	
022	25	Cleaning brush	A4EU5106	
023	26	Power supply ball bearing	A0G65039	
024	27	Transfer electrode unit	A4EUA508	
025	28	Earth electrode unit	A4EUA506	
026	29	Power supply parts	65AA2689	
027	2A	Cleaning shaft	A0G65107	
028	2B	Belt cleaner unit	A4EUA520	
029	2C	Transfer belt unit	A4EUA500	
030	2F	Discharge wire	A0G64708	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
031	30	PCC unit	A0G6R7D5	
032	34	Drum cleaning blade	A0G65350	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double. The running distance of the No.32 drum cleaning blade and the No.33 drum cleaning blade cannot be reset with the counter reset button. The counter is reset in conjunction with the blade setting mode.
033	35	Drum cleaning blade running distance	A0G65350	Measures the count ON time of the photo conductor drive motor , and calculates the ON time x process speed in millimeters. Data is displayed in meters. The running distance of the No.32 drum cleaning blade and the No.33 drum cleaning blade cannot be reset with the counter reset button. The counter is reset in conjunction with the blade setting mode.
034	36	Drum scraper unit	A4EUB530	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
035	37	Scatter prevent filter unit	A4EUB531	
036	38	Drum cleaner brush	A4EUA549	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double. The running distances of the No.36 drum cleaner brush and the No.37 drum cleaner are reset together when one of them is reset with the counter reset button.
037	39	Drum cleaner brush running distance	A4EUA549	Measures the count ON time of the photo conductor drive motor , and calculates the

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
				"ON time" x "brush theta" x "process speed" in millimeters. Data is displayed in meters. The running distances of the No.36 drum cleaner brush and the No.37 drum cleaner are reset together when one of them is reset with the counter reset button.
038	3A	Drum cleaner side seal R	A4EUA543	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
039	3B	Drum cleaner side seal F	A4EUA542	
040	3C	Fur brush scraper	A4EUA548	
041	3D	Cleaner toner tray	A4EUB549	
042	3E	Guide shaft	A0G65305	
043	3F	Drum Cleaning Gear/2 Assy	A4EUA534	
044	40	Drum cleaning gear /3	A0G65327	
045	41	Cleaner unit	A4EUA530	Count when the normal fusing unit is connected. 0 to 3 counts according to the print area when transferring to paper completes.
046	46	Fixing cleaning web	A4EW7314	
047	47	Fix. roller (U)	56UA5304	Count when the normal fusing unit is connected. 2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
048	48	Fusing roller Unit(L)	A4EUA797	
049	49	Fusing claws top	56UA5453	
050	4A	Fusing claws low	25AA5329	
051	4B	Heat sleeve (Top)	45405339	
052	4C	Top roller bearing	A0G67346	
053	4D	Fixing CL sheet	A4EUA779	
054	4E	Fusing cleaning roller	56UA5353	
055	4F	Fusing heater	A4EWM330	
056	50	Fixing sub roller	56UA5307	
057	51	Heat sleeve (Heated)	26AA5315	
058	52	Outside heat roller sensor	55VA8806	
059	53	Outside heater	A4EUM331	
060	54	Heat roller holder	56UA7507	
061	55	Heat roller sensor	55VA8804	
062	56	Fusing gear /2	A0G67260	1 count for each paper exit in the single side mode, 2 counts in the double side mode.
063	57	Web motor	A00TM100	
064	58	Web prevention part	A4EUA744	Count when the normal fusing unit is connected. 2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
065	5B	Fusing unit	A4EUA720/A4EWA720	Count when the normal fusing unit is connected. 2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
066	7E	Tray1 feed roller	A4EUB602	1 count for each exit of paper from Tray1
067	7F	Tray1 conv/rev roller	A4EUB601	
068	80	Tray1 feed clutch	57GA8201	
069	81	Tray1 handle clutch	57GA8201	
070	82	Tray2 feed roller	A4EUB602	1 count for each exit of paper from Tray2
071	83	Tray2 conv/rev roller	A4EUB601	
072	84	Tray2 feed clutch	57GA8201	
073	85	Tray2 handle clutch	57GA8201	
074	86	Tray1 input gear	A0G66023	1 count for each exit of paper from Tray1
075	87	Tray2 input gear	A0G66023	1 count for each exit of paper from Tray2

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
076	89	Paper fur brush	A4EUA705	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
077	8A	Cleaning case unit	A4EUA701	
078	8B	V-convey clutch top	57GA8201	1 count for each exit of paper from Tray1, 2
079	8C	V-convey clutch mid.	57GA8201	1 count for each exit of paper from Tray2
080	8D	V-convey clutch low	57GA8201	
081	8E	V-convey exit roller	A4EU7103	1 count for each paper exit.
082	8F	V-convey roller /1 (φ20)	56UA4413	1 count for each paper exit.
083	90	V-convey roller 2/3 (φ/32)	A0G67002/A0G67003	1 count for each exit of paper from Tray2
084	91	Tray1 pre-reg. roller	A0G67001	1 count for each exit of paper from Tray1
085	92	Tray2 pre-reg. roller	A0G67001	1 count for each exit of paper from Tray2
086	93	Brush gear assembly	A4EUB709	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
087	97	Registration roller /Up Registration bearing	56UA4606/A4EU7154	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
088	98	Registration gear /Up Registration gear /Lw	A0G67142/A0G67143	
089	99	Roller gear /Rt Motor gear /Rt	A4EU7144/A4EU8146	1 count for each paper exit in the single side mode, 2 counts in the double side mode.
090	9D	ADU accelerator roller	A4EU8171	1 count for each paper reversed in the main body and exited in the single side mode, 1 count in the double side mode
091	9E	Reversal output roller	A4EU8172	2 counts for each paper reversed in the main body and exited in the single side mode, 1 count in the double side mode.
092	9F	ADU reversal roller	A4EU8176	2 counts for each paper reversed in the main body and exited in the single side mode, 2 counts in the double side mode.
093	A0	Output convey roller	A4EUB835/A4EU8174	1 count for each paper reversed in the main body and exited in the single side mode
094	A1	ADU convey roller	A4EU8175/A4EU8177	0 count for each paper exit in the single side mode, 1 count for double
095	A5	De-curler belt	A0G68464	1 count for each paper exit using upper de-curler or lower decurler.
096	A6	Fixing exit roller	56UA4595(N=4)	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
097	A7	Guide member /Up	A0G68451	1 count for each paper exit using upper de-curler
098	A9	De-curler entrance roller	A4EU8407	1 count for each paper exit in the single side mode, 1 count in the double side mode.
099	AA	Reversal output guide	56UA4760	1 count for each paper exit in the single side mode, 2 counts in the double side mode.
100	AB	Coupling unit	A4EU8470	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
101	AF	Output roller	56UA4557	1 count for each paper exit in the single side mode, 1 count in the double side mode.
102	B3	Tray1 feed counter	A4EUA600	1 count for each exit of paper from Tray1
103	B4	Tray2 feed counter	A4EUA600	1 count for each exit of paper from Tray2
104	B5	Tray3 feed counter	A0GCA600/A0GDA620	1 count for each exit of paper from Tray3

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions

162	3C	ADF torque limiter	13GA-135	
163	3D	ADF SDF solenoid	13GA8252	All original feed count in SDF mode
164	3E	ADF LSB solenoid	13GA8251	1 count for each sheet of the large-size original single side mode. *2 1 count for each sheet of the large-size original double side mode.*2
165	3F	ADF press/release SD	13GA8251	1 count for each sheet of the large-size original double side mode.*2
166	40	ADF SSB solenoid	13GA8251	1 count for each sheet of the all size original double side mode.
167	45	FS Staple /ASSY	A4F37350	1 count for each booklet exit in either of the 1-staple at front or 1-staple at rear mode. 2 counts for each booklet exit completion in the 2-stapling mode
168	46	FS paddle	A4F37467	1 count for each paper exit completion to the staple stacker.
169	47	Driven roller/1	A4F37020	1 count for each paper exit.
170	48	Driven roller/2	A4F37022	
171	A0	GP Slant roller unit	A0N9PA01	1 count for each paper exit in multi-punch mode.
172	A1	GP Bypass unit	A0N9PA02	1 count for each paper exit.
173	A2	GP roller drive section	A0N9PA03	1 count for each paper exit in multi-punch mode.
174	A3	GP Belt Aligner (Green)	A0N9PA04	
175	A4	GP back-gauge mechanism	A0N9PA05	
176	E3	GP pull-back pad	A4F6PP0000	1 count for each paper stacked in the GP stacker
177	E4	GP suction cup	A4F6PP0300	
178	E5	GP die set felt	A4F6PP0100	
179	E6	GP die set	A4F6PP0200	
180	F3	ZU punch motor assy	A111A928	Number of punch of ZU (number of sheets of output ZU punch paper)
181	F4	ZU punch	14JB5001/ 14JA5001/	
182	F8	SD Staple	A4F47300	2 counts for each booklet exit completion in the saddle stitching mode.
183	F9	2nd folding gate solenoid	9J07M200	1 count for each paper exit in the tri-folding mode.
184	FA	Lead edge nip solenoid	26NA8251	1 count for each paper (356mm or more in length) exit completion to the staple stacker (saddle stitching/bundle center-folding/tri-folding)
185	FB	Paddle	A4F47273	1 count for each paper exit completion to the staple stacker (Saddle stitching/bundle center-folding/tri-folding)
186	FF	PI Conveyance Clutch/U	13QN8201	1 count for each PI upper paper feed.
187	00	PI feed roller assy/A/Top	50BA-574	
188	01	PI feed roller/B/U	13QN-446	
189	02	PI reverse rubber/Top	13QN-443	
190	03	PI Torque Limiter/U	13QN4073	
191	04	PI Conveyance Clutch/L	13QN8201	1 count for each PI lower paper feed.
192	05	PI Feed Roller assy/A/Low	50BA-574	
193	06	PI Feed Roller/B/L	50BA-575	
194	07	PI reverse rubber/Low	13QN-443	
195	08	PI Torque Limiter/L	13QN4073	
196	0C	Punch unit	A4FAW01 (Japan 2-hole)	Number of sheets output in the punch mode

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
			A4FAW11(North America 2/3-hole) A4FAW21(Europe 2/4-hole)	

1 The part number of the developing suction seal is displayed as "A4EU39/A0G639*/56UA31*" on the control panel. It is printed as "suction seal" for the list output.

*2 The large-size original represents all originals in the mixed original mode; A3, B4, A4S, B5S, 8K, 16KS, 11 x 17, 8 1/2 x 14, 8 1/2 x 11S, 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13

Note

- When the fixed part count exceeds the limit, the No. is displayed in different color with the * (asterisk) mark on the left.
- The count related to the finisher is conducted by the main body as well as the other items.

5.5.19 Special Parts Counter (1250/1250P/1052)

Note

- Be sure to reset the fusing cleaning web counter (Number.046) after replacing the cleaning web. Otherwise, fuser cleaning trouble occurs.
- Be sure to perform the blade set mode of the service mode after replacing the cleaning blade. This operation automatically resets the cleaning blade counter (No.032, 033). Otherwise, the auto blade replacement cannot be implemented.
- Maximum count: 99,999,999

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
001	00	Charging filter	A4EU1181	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.

012	16	Developing unit	A4EUA370	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
013	17	Suction unit	A4EUA390	
014	1A	Stirring plate assy	A4EUA401/A4EUB409	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
015	1B	Toner supply sleeve /1	A4EUB402	
016	1C	Toner supply sleeve /2	A4EUB403	
017	1D	Toner pump /1	A4EUB420	1 count for each paper exit in the single side mode, 2 counts in the double side mode.
018	1E	Toner pump /2	A4EUB440	
019	22	Guide blade unit	A4EUA526	2 counts for each 338mm or longer (in sub scan direction) paper exit in the
020	23	Transfer belt	A0G65001	

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
021	24	Transfer roller	A4EU5006	single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
022	25	Cleaning brush	A4EU5106	
023	26	Power supply ball bearing	A0G65039	
024	27	Transfer electrode unit	A4EUA508	
025	28	Earth electrode unit	A4EUA506	
026	29	Power supply parts	65AA2689	
027	2A	Cleaning shaft	A0G65107	
028	2B	Belt cleaner unit	A4EUA520	
029	2C	Transfer belt unit	A4EUA500	
030	2F	Discharge wire	A0G64708	
031	30	PCC unit	A0G6R7D5	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
032	34	Drum cleaning blade	A0G65350	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double. The running distance of the No.32 drum cleaning blade and the No.33 drum cleaning blade cannot be reset with the counter reset button. The counter is reset in conjunction with the blade setting mode.
033	35	Drum cleaning blade running distance	A0G65350	Measures the count ON time of the photo conductor drive motor , and calculates the ON time x process speed in millimeters. Data is displayed in meters. The running distance of the No.32 drum cleaning blade and the No.33 drum cleaning blade cannot be reset with the counter reset button. The counter is reset in conjunction with the blade setting mode.
034	36	Drum scraper unit	A4EUB530	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double.
035	37	Scatter prevent filter unit	A4EUB531	
036	38	Drum cleaner brush	A4EUA549	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count for the single and 2 counts for the double. The running distances of the No.36 drum cleaner brush and the No.37 drum cleaner are reset together when one of them is reset with the counter reset button.
037	39	Drum cleaner brush running distance	A4EUA549	Measures the count ON time of the photo conductor drive motor, and calculates "ON time" x "brush θ " x "process speed" in millimeters. Data is displayed in meters. The running distances of the No.36 drum cleaner brush and the No.37 drum cleaner are reset together when one of them is reset with the counter reset button.
038	3A	Drum cleaner side seal R	A4EUA543	2 counts for each 338mm or longer (in sub scan direction) paper exit in the single side mode, 4 counts for the double. Except for those sizes, 1 count
039	3B	Drum cleaner side seal F	A4EUA542	
040	3C	Fur brush scraper	A4EUA548	

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions

240	51	FD feed roller/B Low	50BA-575	
241	52	FD punch unit	A0H0A91A /A91E/ A91F	1 count for each paper exit completion in the punch mode.
242	53	FD solenoid/A unit(release/1)	15AG-493	1 count for each paper exit completion in the punch or folding mode (all size).
243	54	FD solenoid/A unit(release/2)	15AG-688	1 count for each paper exit completion in the folding mode (all size)

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
				1 count for each paper exit completion in the punch mode (paper length 220mm or larger).
244	55	FD Motor Assy(Up/Down Motor)	129U-108	1 count for each paper exit completion to the main tray (FD self connection only)
245	59	LS3 Up/Down motor	15AV8003	Counts operation number of times of the stacker tray up down motor.
246	5A	LS1 solenoid (Lead)	15AV8252	1 count for each paper exit completion in the offset operation (all size)
247	5B	LS1 solenoid (Rear)	15AV8253	1 count for each paper exit completion. (All size)
248	5C	LS1 solenoid (Center)	15AV8251	1 count for each paper exit completion. (Paper size: 295mm or more in length and 226mm or more in width)
249	5D	LS1 solenoid (Curl)	15AV8255	1 count for each paper exit completion.
250	5E	LS1 Up/Down motor	15AV8003	Counts operation number of times of the stacker tray up down motor.
251	5F	LS2 solenoid (Lead)	15AV8252	1 count for each paper exit completion in the offset operation (all size)
252	60	LS2 solenoid (Rear)	15AV8253	1 count for each paper exit completion. (All size)
253	61	LS2 solenoid (Center)	15AV8251	1 count for each paper exit completion. (Paper size: 295mm or more in length and 226mm or more in width)
254	62	solenoid (Curl)	15AV8255	1 count for each paper exit completion.
255	63	LS2 Up/Down motor	15AV8003	Counts operation number of times of the stacker tray up down motor.
256	64	LS3 solenoid (Lead edge SD)	15AV8252	1 count for each paper exit completion in the offset operation (all size)
257	65	LS3 solenoid (Trail edge SD)	15AV8253	1 count for each paper exit completion. (All size)
258	66	LS3 solenoid (Center SD)	15AV8251	1 count for each paper exit completion. (Paper size: 295mm or more in length and 226mm or more in width)
259	67	LS3 solenoid (Curl SD)	15AV8255	1 count for each paper exit completion.
260	68	SD Staple/Right	15AN-550	1 count for each book exit in the saddle stitching mode/multi center folding mode
261	69	SD Staple/Left	15AN-550	1 count for each book exit in the saddle stitching mode/multi center folding mode
262	6A	SD trimmer edge	A0H2R901	1 count for each booklet exit completion in the trimming mode
263	6B	SD trimmer receiver	A0H2B622	1 count for each booklet exit completion in the trimming mode
264	6C	SD solenoid (Release)	15AN8251	1 count for each paper exit completion to the folding section.
265	6D	SD solenoid (Release SD)	13QE8251	1 count for each paper exit completion to the folding section.
266	6E	SDFNS solenoid /2 (Overlap gate SD)	12QR8252	1 count for each paper exit completion to the pile alignment section
267	6F	SD gear /B	15AN7719	1 count for each book exit in the saddle stitching mode/half-folding mode
268	70	SD trimmer press motor	A0H2M101	1 count for each booklet exit completion in the trimming mode
269	71	SD trimmer edge motor	A0H2M102	
270	72	SD trimmer unit	A0H2A620	
271	77	PB sub tray exit solenoid	15ANR714	1 count for each paper exit in PB sub tray
272	78	PB SB roller release drive motor	A0V9M101	1 count for each paper exit in PB stack section
273	79	PB SubCompile FD SD	15AA8251	
274	7A	PB SC pressure arm solenoid	15AA8251	
275	7B	PB paper exit drive roller /A	13GQ4519	1 count for each paper exit from PB

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
276	7C	PB tray feed roller	55VA-484	1 count for each book exit in PB tray cover mode.
277	7D	PBTray conv/rev roller	55VA-483	
278	7E	PB tray feed clutch	56AA8201	
279	7F	PB tray handle clutch	56AA8201	
280	80	PB cutter /ASSY	A0756230	1 count for each book exit when PB cover paper trimming is set.
281	82	PB path switch solenoid	56QA8251	1 count for each book exit in other than PB tray cover mode.
282	84	PB503 melt tank Assy	A15XA36A/36E/36F	Time during which tank applying roller of PB-503 rotates. 1 count per hour.
283	85	PB503 Exhaust filter /A	A15X3017	1 count for each paper exit in PB stack section
284	86	PB503 Exhaust filter /B	A15X3018	
285	87	Pellet supply cooling fan	27LA8051	1 count for each paper exit in PB stack section
286	88	One-way clutch /A	13GQ7709	1 count for each paper exit in PB stack section
287	89	One-way clutch /B	13GQ7709	1 count for each paper exit in PB stack section
288	8A	Shaft of the driving gear of the melt tank applying roller	A0753799	Time during which tank applying roller of PB-503 rotates. 1 count per 8 hours.
289	A0	GP Slant roller unit	A0N9PA01	1 count for each paper exit in multi-punch mode.
290	A1	GP Bypass unit	A0N9PA02	1 count for each paper exit.
291	A2	GP roller drive section	A0N9PA03	1 count for each paper exit in multi-punch mode.

344	E6	GP die set	A4F6PP0200	
345	F8	SD Staple	A4F47300	2 count for each book exit in the saddle stitching mode/half-folding mode
346	F9	2nd folding gate solenoid	9J07M200	1 count for each paper exit in the tri-folding mode.
347	FA	Lead edge nip solenoid	26NA8251	1 count for each paper (356mm or more in length) exit completion to the staple stacker (saddle stitching/bundle center-folding/tri-folding)
348	FB	Paddle	A4F47273	1 count for each paper exit completion to the staple stacker (Saddle stitching/bundle center-folding/tri-folding)
349	FF	PI Conveyance Clutch/U	13QN8201	1 count for each PI upper paper feed
350	00	PI feed roller assy/A/Top	50BA-574	
351	01	PI feed roller/B/U	13QN-446	
352	02	PI reverse rubber/Top	13QN-443	
353	03	PI Torque Limiter/U	13QN4073	
354	04	PI Conveyance Clutch/L	13QN8201	1 count for each PI lower paper feed.
355	05	PI Feed Roller assy/A/Low	50BA-574	
356	06	PI Feed Roller/B/L	50BA-575	
357	07	PI reverse rubber/Low	13QN-443	
358	08	PI Torque Limiter/L	13QN4073	
359	0C	Punch unit	A4FAW01 (Japan 2-hole)	Number of sheets output in the punch mode

No.	CSRC Parameter (Z1, Z7)	Parts name	Parts No.	Count conditions
			A4FAW11 (North America 2/3-hole) A4JUF21 (Europe 2/4-hole)	

1 The part number of the developing suction seal is displayed as "A4EU39/A0G639*/56UA31*" on the control panel. It is printed as "suction seal" for the list output.

*2 The large-size original represents all originals in the mixed original mode; A3, B4, A4S, B5S, 8K, 16KS, 11 x 17, 8 1/2 x 14, 8 1/2 x 11S, 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4, 8 x 13

Note

- When the fixed part count exceeds the limit, the No. is displayed in different color with the * (asterisk) mark on the left.
- The count related to the finisher is conducted by the main body as well as the other items.

5.5.20 Voluntary Part Counter (Parts Counter)

Used to control the service history of each part not registered as a special part.

For 30 data from No. 01 up to 30, confirm and reset of the name, P/N (parts number), limit value and print count.

Note

- Take 1 count for each print page of all paper exits with no discrimination made by paper size.
- When the print count is in excess of a limit value, an asterisk "*" is displayed to the left of the limit value and the item which is in excess is displayed in red.

(1) Set/Check procedure

1. "Service Mode Menu screen"
Press [03 Counter/Data]
2. "Service Mode Menu screen"
Press [03 Parts Counter].
3. "Parts Counter Menu screen"
Press [02 Voluntary Part Counter].
4. "Parts Counter <Voluntary Part Counter> screen"
Press [Next] or [Previous] to scroll the screen.
Press [▲] or [▼] to select a data number.
5. Select either [Parts Name Setting], [P/N Setting], or [Limit Setting].
6. Enter the data to set or change.
 - [Name Setting]: Enter a part name (16-digit)
 - [P/N]: Enter the part number. (13-digit)
 - [Limit]: Enter the limit value. (8 digits)
7. Press [OK] to update data.
Press [Cancel] to cancel the update.

(2) Reset procedure

1. "Service Mode Menu screen"
Press [03 Counter/Data]
2. "Service Mode Menu screen"
Press [03 Parts Counter].
3. "Parts Counter Menu screen"
Press [02 Voluntary Part Counter].
4. "Parts Counter <Voluntary Part Counter> screen"
Press [Next] or [Previous] to scroll the screen.
Press [▲] or [▼] to select an item you want to reset.
5. Press [Counter Clear].
6. "Reset confirm screen"
Press [Yes] to reset the counter.
Press [No] not to reset the counter. You return to the "Parts Counter <Voluntary Part Counter> screen."

5.6 State Confirmation

5.6.1 I/O Check Mode

(1) Outline

This machine is equipped with the input/output checking function as a self-diagnostic function, which allows the signal check (input check) and the checking and adjustment (output check) of the load behavior.

(2) "I/O Check Mode screen"

[1]	I/O check code	[2]	Multi code
[3]	[3] Input check	[4]	[4] Output check

5.6.2 Input check method

(1) Usage

Input check can check each sensor signal.

(2) Procedure

- "Service Mode Menu screen"
Press [04 State Confirmation].
- "Service Mode Menu screen"
Press [01. I/O Check Mode].
- "I/O Check Mode screen"
Enter the input check code with the numeric keys.
- To use the multi mode, press the Access button.
- Enter the multi code with the numeric keys.
- The input check result (H/L) is shown in the message display column "IN".

7. Repeat steps 3 to 6 to perform the other signal input check.

5.6.3 Output check method

(1) Usage

Output check mode can check the operation of each load.

(2) Procedure

- "Service Mode Menu screen"
Press [04 State Confirmation].
- "Service Mode Menu screen"
Press [01. I/O Check Mode].
- "I/O Check Mode screen"
Enter the output check code with the numeric keys.
- To use the multi mode, press the Access button.
- Enter the multi code with the numeric keys.
- Press the start key.
The load specified operates.
- Press the stop button.
The operation of the load is completed.
- Repeat steps 3 to 7 to perform the other load or signal output check.

5.6.4 IO check mode list

Co de	Mul ti	Input check				Output check			
		Classific ation	Symb ol	Name	Display and signal source	Classific ation	Symb ol	Name	Restrictive conditions

5.6.5 Adjustment when replacing the multi feed detection board (main body) (1250/1250P/1052 only)

(1) Usage

When the multi feed detection board of the main body or the ADU drive board /1 (ADUDB1) is replaced, conduct this adjustment. Adjust it when multi feed is not detected properly due to specific types of paper (such as thin paper, coated paper with less stiffness, and thick paper).

Note

- Adjustment error occurs because of the temperature of the sensor surface. Make the adjustment at a temperature close to the condition in which the copier is actually used (20°C to 30°C). (In the case you brought a new part from outdoors, make the adjustment after the temperature of the sensor surface and the room temperature become the same)

(2) Procedure

- Replace the multi feed detection board /S and /R. (Refer to [G.2.2.21 Multi feed detection board \(1250/1250P/1052 only\)](#))
- Select the input check code "56-00" of the I/O check mode in the service mode.
- Insert 1 sheet of the paper (P/N 65AA9950#) between the multi feed detection board /S and /R (200g/m² to 300g/m² paper can also be used). Be sure that the paper does not trail down.

Note

- If the paper trails down, the angle of paper insertion is different from the angle of paper passage, thus making it impossible to make an accurate adjustment.

- Connect the tester (voltmeter) to the following positions of the ADUDB1.

+terminal: test pin Number TP75 (white) [1]

- terminal: test pin Number TP57 (green) [2]

Range: DC 20V

Note

- Because the duplex section is powered, do not drop any metal material on the board, or do not connect the tester pin to an irrelevant terminal. It causes the board to short circuit and be damaged.

[1]

[2]

1050fs3057c

- In the ADU drive board /1 (ADUDB1) volume, set power voltage to the standard value. Standard value: 5.0 ± 0.2V

6. Pull out the paper inserted in step 3.
7. Insert one sheet of paper that customer mainly use (paper weight 62g/m² to 209g/m²), that customer mainly use and confirm that "L" is displayed on the input check display
 "L": no multi feed (0 or 1 sheet of paper)
 "H": multi feed (2 sheets of paper)
8. Insert another sheet of paper (2 sheets in all), that customer mainly use and confirm that "H" is displayed on the input check display.
9. If there is a detection error, return to step 3 to conduct the adjustment again. In step6, set power voltage to the value 1.0V lower than the previous adjustment.
10. Repeat the steps 7 to 9 until detection error is resolved.
11. Pull out the inserted papers, and install the parts you removed.

5.6.6 Cleaning blade transportation lock

(1) Usage

This lock separates the cleaning blade from the drum, thus preventing any damage on the cleaning blade while moving the machine or during a long-term storage.

Use this lock when packing the machine while moving an installation location.

Note

- **While conducting this mode, the blade is automatically replaced. In case the first cleaning blade was used before packing, be sure to perform a spring charge for the auto blade replacement as you reinstall the machine.**

(2) Procedure

1. Check whether the currently used cleaning blade is the first one or the second one.
2. Enter the I/O check mode.
3. Enter "17" with the numeric keys. Confirm that "17-00" is displayed on the message display area.
4. Open the front door /Rt.

Note

- **If the front door /Rt is not open, the blade motor (M22) does not rotate.**

5. Press the start key.
6. The blade motor (M22) starts rotating, and the cleaning blade moves from the drum to the transportation lock position.

5.6.7 Scanner transportation lock

(1) Usage

Move the scanner mirror to the transportation lock position, thus making it easy to fix the mirror with screws.

Use this lock when packing the machine while moving an installation location.

(2) Procedure

1. Enter the I/O check mode.
2. Enter "36" with the numeric keys. Confirm that "36-00" is displayed on the message display area.
3. Press the start key.
4. The scanner motor (M27) starts rotating, and the mirror moves to the left.
5. Fix the mirror with the lock screws of the scanner mirror you removed when unpacking the machine.

5.6.8 Removing toner in the toner mixing section

(1) Usage

After moving the installation location of the machine, remove the toner which have dropped into the mixing section of the toner supply section.

(2) Procedure

1. Enter the I/O check mode.
2. Enter "54" with the numeric button. Confirm that "54-00" is displayed in the message display area.
3. Press the Access button.
4. Enter "09" with the numeric keys. Confirm that "54-09" is displayed in the message display area.
5. Press the start button.
6. The toner pump motor (M28) and the air pump motor (M29) start rotating. Press the STOP button to stop them after about 1minute.

5.6.9 Adjustment when replacing the multi feed detection board (PI) (new type)

(1) Usage

When the multi feed detection board (MFDB) of PI or PI drive board (PIDB) is replaced, conduct this adjustment.

Also, perform this adjustment when multi feed of special paper (thin paper, coated paper with less stiffness, thick paper) cannot be detected properly.

Note

- **Adjustment error occurs because of the temperature of the sensor surface. Make the adjustment at a temperature close to the environment in which the copier is actually used (20 °C to 30 °C).**
(In the case you brought a new part from outdoors, make the adjustment after the temperature of the sensor surface and the room temperature become the same)

(2) Procedure

1. Replace the multi feed detection board /1, /2. (Refer to chapter II "Maintenance4.3.5 Registration section") (Refer to [G.17.3.18 Multi feed detection board /1 \(MFDB/1\) and /2 \(MFDB/2\) \(new type\)](#))
2. Enter the I/O check mode.
3. Enter "70" with the numeric keys. Confirm that "70-00" is displayed on the message display area.

4. Press the Access button.
5. Enter "82" with the numeric keys. Confirm that "70-82" is displayed on the message display area.
6. Open the FD upper door and front door to turn the jam clearing knob [1]. Insert 1 sheet of paper [2] (P/N 65AA-991#, fusing adjustment paper, 16 sheets/A3) between the multi feed detection boards /1 and /2 [3] (200g/m² to 300g/m² paper can also be used).

Note

- Turn the jam clearing knob until the paper hits the roller [4], thus confirming that the paper is between the multi feed detection board /1 and /2.

7. Press the Start key to activate the output check mode. Connect the tester (voltmeter) to the following positions of the PIDB.
+ terminal: test pin Number TP51 (GAIN) [1]
- terminal: test pin Number TP11 (SGND) [2]
Range: DC 20V

Note

- Because the FD is powered, do not drop any metal material on the board, or do not connect the tester pin to an irrelevant terminal.
It causes the board to short circuit and be damaged.

8. In the PIDB volume (VR2), set power voltage to the standard value.
Standard value: 9.0 ± 0.1V
9. Press the Stop key and pull out the paper inserted in step 6.
10. Insert 1 sheet of paper that customer mainly uses (paper weight 50g/m² to 300g/m²), and confirm that the LED of PIDB (LED1) turns ON.
LED ON: No multi feed (0 or 1 sheet of paper)
LED OFF: Multi feed (2 sheets of paper)
11. Insert another sheet of paper (2 sheets in all), that customer mainly uses, and check that the LED turns OFF.
12. If there is a detection error, return to step 6 to conduct the adjustment again. In step 8, set power voltage to the value 1.0V lower than the previous adjustment.
13. Repeat the steps 9 to 12 until detection error is resolved.
14. Pull out the inserted papers, and install the parts you removed.

5.6.10 Adjustment when replacing the multi feed detection board (PI) (old type)**(1) Usage**

When the multi-feed detection board (MFDB) of PI or PI drive board is replaced, conduct this adjustment.

Also, perform this adjustment when multi feed of special paper (thin paper, coated paper with less stiffness, thick paper) cannot be detected properly.

Note

- The multi-feed detection board /1 and /2 are adjusted in the manufacturing process as a pair of upper and lower. Be sure to replace them as a pair.
- Adjustment error occurs because of the temperature of the sensor surface. Make the adjustment at a temperature close to the environment in which the copier is actually used (20 °C to 30 °C).

(In the case you brought a new part from outdoors, make the adjustment after the temperature of the sensor surface and the room temperature become the same)

(2) Procedure

- 1. Replace the multi-feed detection board /1, /2. (Refer to [G.17.3.19 Multi feed detection board /1 \(MFDB/1\) and /2 \(MFDB/2\) \(old type\)](#))
- 2. Check the stamp letter [1] placed on the multi-feed detection boards /1 and /2, and rotate the rotary switch [2] on the PI drive board (PIDB) as shown in the following table.

Stamp letter	Rotary switch
A	1
B	2
C	3
D	4
E	6
F	7

Note
• The rotary switch5 is not used.

- 3. Enter the I/O check mode.
- 4. Enter "70" with the numeric keys. Confirm that "70-00" is displayed on the message display area.
- 5. Press the Access button.
- 6. Enter "82" with the numeric keys. Confirm that "70-82" is displayed on the message display area.
- 7. Open the FD upper door and front door to turn the jam clearing knob [1]. Insert 1 sheet of paper [2] (P/N 65AA-991#, fusing adjustment paper, 16 sheets/A3) between the multi-feed detection boards /1 and /2 [3] (200g/m/2 to 300g/m2 paper can also be used).

Note
• Turn the jam clearing knob until the paper hits the roller [4], thus confirming that the paper is between the multi-feed detection board /1 and /2.

- 8. Press the Start key to activate the output check mode. Connect the tester (voltmeter) to the following positions of the PIDB.
+ terminal: test pin Number TP51 (GAIN) [1]
- terminal: test pin Number TP11 (SGND) [2]

Range: DC 20V

Note

- Because the FD is powered, do not drop any metal material on the board, or do not connect the tester pin to an irrelevant terminal.
It causes the board to short circuit and be damaged.

- In the PIDB volume (VR2), set power voltage to the standard value.
Standard value: $8.0 \pm 0.2V$
- Press the Stop key and pull out the paper inserted in step 4.
- Insert 1 sheet of paper that customer mainly uses (paper weight 50g/m² to 300g/m²), and confirm that the LED of PIDB (LED1) turns ON.
LED ON: No multi-feed (0 or 1 sheet of paper)
LED OFF: Multi-feed (2 sheets of paper)
- Insert another sheet of paper (2 sheets in all), that customer mainly uses, and check that the LED turns OFF.
- If there is a detection error, return to step7 to conduct the adjustment again. In step9, set power voltage to the value 1.0V lower than the previous adjustment.
- Repeat the steps 10 to 13 until detection error is resolved.
- Pull out the inserted papers, and install the parts removed.

5.6.11 Adjustment when replacing the multi feed detection board (PI-PFU)

(1) Usage

When the multi feed detection board (MFDBS/MFDBR) or the multi feed detection drive board (MFDDDB) of PI-PFU is replaced, conduct this adjustment.

Also, perform this adjustment when multi feed of special paper (thin paper, coated paper with less stiffness, thick paper) cannot be detected properly.

Note

- The multi feed detection board /S and /R are adjusted in the manufacturing process as a pair of upper and lower. Be sure to replace them as a pair.
- Adjustment error occurs because of the temperature of the sensor surface. Make the adjustment at a temperature close to the condition in which the copier is actually used (20°C to 30°C). (In the case you brought a new part from outdoors, make the adjustment after the temperature of the sensor surface and the room temperature become the same)

(2) Procedure

- Replace the multi feed detection board /S and /R. Replace the multi feed detection board /S and /R. (Refer to [G.4.2.14 Multi feed detection boards /S \(MFDBS\) and /R \(MFDBR\) \(PI-PFU only\)](#))
- Check the stamp letter [1] placed on the multi feed detection board /S, /R, and rotate the rotary switch [2] on the multi feed detection drive board (MFDDDB) as per following table.

Stamp letter	Rotary switch
A	A
B	B
C	C
D	D
E	E
F	F

Note

- Be sure to set this setting before installing the exit conveyance unit (FA) to PI-PFU since the adjusting point is inaccessible when the exit conveyance unit is installed to PI-PFU.

3. Select the output check code "89-71" of the I/O check mode in the service mode.
4. Put 1 sheet of paper (P/N 65AA9950#) [1] into the paper path [2] and insert it between the multi feed detection board /S and /R [3] (200g/m² to 300g/m² paper can also be used).

Note

- Turn the jam clearing knob until the paper hits the PF exit conveyance sensor /1 (PS24) [4], thus confirming that the paper is between the multi feed detection board /S and /R.

5. Press the Start key to activate the output check mode. Rotate the volume (VR1) [2] of MFDDB [1] to the right to turn OFF LED2 [3].

6. Rotate VR1 to the left and stop it at the position where LED2 (green) is stably ON.

Note

- Be sure to rotate VR1 to the left after rotating it to the right to turn OFF LED2. Be sure to stop at the position where it changes to be stably ON after rotating it to the left and passing through OFF to flashing. When the volume is rotated to the left too much from the stable lighting, LED1 [4] (red) turns ON. In this condition, the voltage gets higher than the standard and it misjudges the multi feed conveyance as 1 sheet conveyance.
- Conduct the adjustment while the LED2 (green) is ON and LED1 (red) is OFF.

7. Pull out the paper inserted in step4.
8. Insert one sheet of paper that customer mainly use (paper weight 50g/m² to 300g/m²), and confirm that the MFDDB's LED2 can be turned on.
LED2 ON: no multi feed (Judged as 0 or 1 sheet of paper)
9. Fold in half by the longer side of the paper that customer mainly uses (A3 or 11 x 7) and set it onto the PI-PFU tray (A4 or 81/2 x 11). Feed the paper using the inter-sheet function in the application function, and check that whether it detects multi feed or not.

Note

- Be sure to set the folded paper with the fold line toward the feed direction.
- Multi feed detection JAM code 81-07

10. If there is a detection error, return to step4 and adjust with the paper which the customer mainly uses.

11. Repeat steps 4 to 10 until detection error is resolved.
12. Pull out the inserted papers, and install the parts you removed.

5.6.12 Adjustment when replacing the cover paper multi feed detection board (PB)

(1) Usage

When the cover paper multi feed detection board of PB or the PB control board (PBCB) is replaced, conduct this adjustment.

Also, perform this adjustment when multi-feed of special paper (thin paper, coated paper with less stiffness, thick paper) cannot be detected properly.

Note

- The multi-feed detection board /S and /R are adjusted in the manufacturing process as a pair. Be sure to replace them as a pair.
- Adjustment error occurs because of the temperature of the sensor surface. Make the adjustment at a temperature close to the environment in which the copier is actually used (20 °C to 30 °C).
(In the case you brought a new part from outdoors, make the adjustment after the temperature of the sensor surface and the room temperature become the same)

(2) Procedure

1. Replace the multi-feed detection boards /S and /R. (Refer to [G.19.2.31 Multi feed detection boards /S \(MFDBS\) and /R \(MFDBR\)](#))
2. Check the stamp letter [1] placed on the cover paper multi-feed detection boards /S and /R, and rotate the rotary switch [2] on the PBCB as shown in the following table.

Stamp letter	Rotary switch
A	1
B	2
C	3
D	4
E	5

[1]

[2]

564Af3c001cb

3. Insert 1 sheet of paper (P/N 65AA-9910, fusing adjustment paper, 16 sheets/A3) in the cover paper tray of the PB.
(200 to 300g/m² paper can also be used.)
4. Select the output check code "77-96" of the I/O check mode in the service mode.
5. Press the Start key.
Perform the all initializing operation.
6. After the operations, press the Stop key.
7. Select the output check code "77-95" of the I/O check mode in the service mode.
8. Press the Start key.
The paper is fed from the cover paper tray and stops at the conveyance section.

Note

- Confirm that the paper is between the multi-feed detection boards /1 and /2.

9. After the operations, press the Stop key.
10. Connect the tester (voltmeter) to the following positions of the PBCB.
+ terminal: test pin Number TP28 (GAIN) [1]
- terminal: test pin Number TP24 (AGND) [2]
Range: DC 20V

Note

- Because the PB is powered, do not drop any metal material on the board, or do not connect the tester pin to an irrelevant terminal.
It causes the board to short circuit and be damaged.

11. In the PBCB volume (VR4), set power voltage to the standard value.
Standard value: $8.0 \pm 0.1V$
12. Pull out the paper inserted in step 8.
13. Insert 1 sheet of paper that customer mainly uses (paper weight $50g/m^2$ to $300g/m^2$), and confirm that the LED of PBCB (LED1) turns ON.
LED ON: No multi-feed (0 or 1 sheet of paper)
LED OFF: Multi-feed (2 sheets of paper)
14. Insert another sheet of paper (2 sheets in all), that customer mainly uses, and check that the LED turns OFF.
15. If there is a detection error, return to step 3 to conduct the adjustment again. In step 11, set power voltage to the value 1.0V lower than the previous adjustment.
16. Repeat steps 3 to 14 until detection error is resolved.
17. Pull out the inserted papers, and install the parts removed.

5.6.13 FD, SD-506, PB adjustment data EEPROM storage

(1) Usage

Adjustment data of FD, SD-506 and PB which are adjusted in the field are backed up to the nonvolatile memory (EEPROM) of FD control board (FDCB), SD control board (SDCB) and PB control board (PBCB). When necessary, it can be recalled by selecting [Installation Initial Data] in Recall Standard Data (Finisher adjustment data) in the Service Mode.

Note

- Only 1 type of data can be backed up. When backed up again, data is overwritten.
- When several units of SD, FD and PB are connected, the data is backed up to all EEPROMs.
To back up the data of 1 option respectively, connect only the target option to the main body.

(2) Procedure

1. Enter the I/O check mode.
2. Enter "90" with the numeric keys.
Confirm that "90-00" is displayed on the message display area.
3. Press the Start key.
4. "NOW" is displayed while in the back-up. When completed, "FIN" is displayed and the current finisher adjustment data is backed up in the EEPROM.

5.6.14 Main body adjustment data NVRAM board storage (installation data)

(1) Usage

Adjustment data of the main body which are adjusted in the field are backed up to the NVRAM board (NRB). When necessary, it can be recalled with installation data of Recall Standard Data (Machine adjustment data, Process adjustment data) in the service mode.

Note

- Only 1 type of data can be backed up. When backed up again, data is overwritten.

(2) Procedure

1. Enter the I/O check mode.
2. Enter "91" with the numeric keys.
Confirm that "91-00" is displayed on the message display area.
3. Press the start key.
4. "NOW" is displayed while in the back-up. Then when it completes, "FIN" is displayed and the current machine adjustment data and the process adjustment data are backed up in the NRB.

5.6.15 Hard disk check

(1) Usage

Perform this operation if you want to check hard disk /1 (HDD1) total capacity of the copier, the remaining capacity, and the malfunction code (C-D001 to D004) related to the hard disk.

(2) Procedure

1. Enter the I/O check mode.
2. Enter "99" with the numeric keys.
Confirm that "99-00" is displayed on the message display area.
3. Press the Access button.

4. Enter one of the followings with the numeric keys.
Check that "99-##" (## represent multi code number) is displayed in the message display area.
01: HDD1 total capacity check
02: HDD1 remaining capacity check
03: HDD1 bad sectors check and recovery
5. Press the start button.
 - HDD1 total capacity check: The total capacity is displayed
 - HDD1 remaining capacity check: Remaining capacity is displayed
 - HDD1 bad sectors check and recovery:
During the operation-"NOW" is displayed
The operation succeeded - "OK" is displayed
The operation failed - "NG" is displayed
Press the start key to perform the HDD1 bad sectors check and recovery again when "NG" is displayed.

Note

- The operation cannot be canceled during the HDD1 bad sectors check and recovery. (The stop button or [Return] are disabled.)
- Replace the HDD1 in case performing the HDD1 bad sectors check and recovery do not prevent the malfunction code.

5.7 List Output**(1) Usage**

Output various lists.

(2) Procedure

1. "Service Mode Menu screen"
Press [05 List Output].
2. "Service Mode Menu screen"
Press [01 List Output].
3. "List Output screen"
The list output mode menu includes the following items.
 - Machine Management List
 - Adjustment Data List
 - Coverage data list
 - Parameter List
 - Font Pattern
 - Communication Log List *1
 - Maintenance History
 - ORU-M Maintenance History (1250/1250P/1052 only)
 - Memory Dump List

Note

- When setting DIPSW30-1 to 1, the Parameter List, Font Pattern, Communication Log List and Memory Dump List are displayed.
- When setting DIPSW15-0 to 1, the ORU-M Maintenance History is displayed. (1250/1250P/1052 only)
- Do not use the parameter list and the memory dump list in the field because they are for development.

4. "List Output screen"
Select the Item to be output and press [Print Mode].
5. Press the Start key to output the selected list.
6. Press [Close].
7. "List Output screen"
To output other lists, repeat steps 4 to 7.

*1 Prints out the latest 30 items of the sending and receiving history of the mail remote notification system and the CS Remote Care. The start time of communications, the time period of communications (modem only), the communication modes, the results of communications, and the senders (mail only) are printed.

The communication modes and the results of communications are displayed in the numbers of 4 digit number. For the meaning of them, refer to the following table.

	Communication mode	Results of communication
0000	-	Transmitted successfully
0001	Initial transmission	Connection time out when transmitting
0002	Emergency transmission	-
0004	Emergency recovery transmission	Received successfully
0005	-	Reception failed
0008	Transmission for warning	-
0010	Warning recovery transmission	-
0020	Maintenance start transmission	-
0040	Maintenance completion transmission	-
0080	Administrator transmission	-
0100	Fixed date transmission	-
0200	Response transmission	-
0***	-	Transmission failed

1000	Enquiry	-
2000	Data rewrite	-
4000	Response reception	-
6000	ISW complete notification	-
8000	Test mail	-

The SMTP reply codes (200 to 554) prescribed in the RFC1846, 2554 and 2821 or the HTTP reply codes (100 to 510) prescribed in the RFC2616 are displayed in the place of ***.

5.8 Test Mode

5.8.1 Test Pattern Output Mode

(1) Usage

Output various test patterns to use them for troubleshooting.

Note

- Do not use any test pattern number not described in the service manual.

(2) Procedure

- "Service Mode Menu screen"
Press [06 Test Mode].
- "Service Mode Menu screen"
Press [01 Test Pattern Output Mode].
- "Test Pattern Output Mode screen"
Enter the test pattern No. you want to output through the numeric keys and press [Set] and then press [Print Mode].
- Select A3 or 11 x 17 paper, and press the Start button to output the test pattern.
- Press [Close].
- To output other test patterns, repeat steps 3 to 5

5.8.2 Test Pattern Density

(1) Usage

Set the density of test pattern.

(2) Procedure

- "Service Mode Menu screen"
Press [06 Test Mode].
- "Service Mode Menu screen"
Press [02 Test Pattern Density Setting].
- "Test Pattern Density setting screen"
Enter a numeric value through the numeric keys and press [Set] and then press [Print Mode].
Setting range: 0 (light) to 255 (dark).
- Set the A3 or 11 x 17 paper. Press the Start button to output the test pattern.

5.8.3 Running Mode

(1) Usage

Conduct a test while in the continuous print operation.

In this mode, the following items can be selected:

- Intermittent copy
After completion of the printing operation for the set print count, the machine changes into the ready state and waits for 0.5sec. before resuming the same operation.
- Paperless running mode
Without feeding paper and detecting paper or jam, the printing operation is made nearly at the same timing as the normal operation.
In the same manner as the intermittent copy, after completion of the printing operation for the set print count, the machine changes into the ready state and waits for 0.5sec. before resuming the same operation.
- Paperless Mode
In the same manner as the paperless mode, without detecting paper or jam, the printing operation is made nearly at the same timing as the normal operation.
- Paperless endless mode
The machine operates with the print count infinitely set automatically. In the same manner as the paperless mode, without feeding paper and detecting paper or jam, the printing operation is made nearly at the same timing as the normal operation.
- Running Mode
The printing operation is made in the paperless endless mode plus the scanning operation and the auto paper feed tray switching.

(2) Procedure

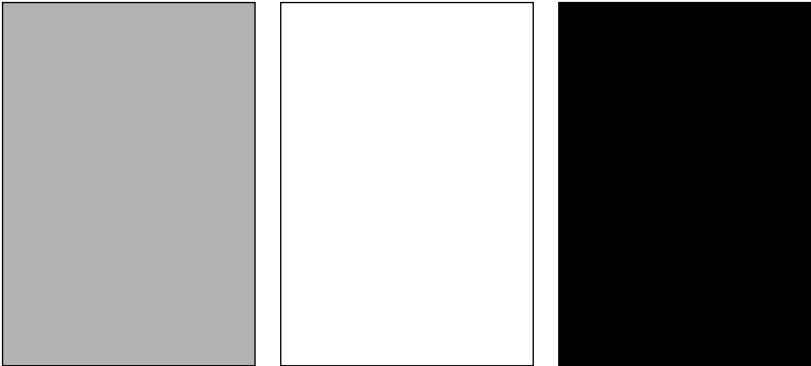

- "Service Mode Menu screen"
Press [06 Test Mode].
- "Service Mode Menu screen"
Press [03 Running Mode].
- "Running Mode screen"
Select the mode that you want to adjust and press [Print Mode].
- Press the Start button to start the running test.
- Press the STOP button to stop the running test.

5.8.4 Test Pattern No.1 Overall halftone

(1) [Check item]

- When density is set to 70 (halftone)
If there are white stripes, black stripes, determine whether the fault is with the scanner system or the process system.
[Recommended checkpoints]: Developing unit, cleaning unit, charger unit, transfer/separation charger unit, scanner mirrors, slit glass, original glass
 - When the density is set to 0 (white)
If the test pattern is gray background image, determine whether the fault is with the process.
Recommended checkpoints]: Charging corona and high voltage contact.
 - When density is set to 255 (black)
If the density is light, determine whether the fault is with the process.
[Recommended checkpoints]: LPH unit
- * For information about setting the density, refer to [1.5.8.2 Test Pattern Density](#).

(2) Test pattern

1050fs3011c

[1]	When the density is set to 70	[3]	When the density is set to 255
[2]	When the density is set to 0	-	

5.8.5 Test Pattern No.9 Line screen halftone

(1) [Check item]

- Check if there is any uneven density or transfer jitter.
[Recommended checkpoints]: Moisture absorption of paper, developing unit, charger, transfer jitter adjustment
For the transfer jitter adjustment, refer to [1.8.2.10 Transfer jitter adjustment](#)

Note

- The density of halftone changes according to the test pattern density adjustment.

(2) Test pattern

1050fs3055c

5.8.6 Test Pattern No.16 Linearity evaluation pattern

(1) [Check item]

Judge from this test pattern whether the scanner system or the printer system is abnormal.
Items that can be checked include main scan magnification, sub scan magnification, image skew, and leading edge timing of the printer system. If the copy image is defective despite no abnormality being visible on the test pattern, the scanner system is defective.

(2) Test pattern

1050fs:3014c

[1]	Edge of pager	-
-----	---------------	---

5.8.7 Test Pattern No.33 Linearity evaluation pattern

(1) [Check item]

Judge from this test pattern whether the scanner system or the printer system is abnormal.

Items that can be checked include main scan magnification, sub scan magnification, image skew, and leading edge timing of the printer system. If the copy image is defective despite no abnormality being visible on the test pattern, the scanner system is defective.

(2) Test pattern

a0y5f3c015ca

5.9 System Setting

5.9.1 Software DIPSW setting procedures

(1) OUTLINE

Set the software DIPSW.

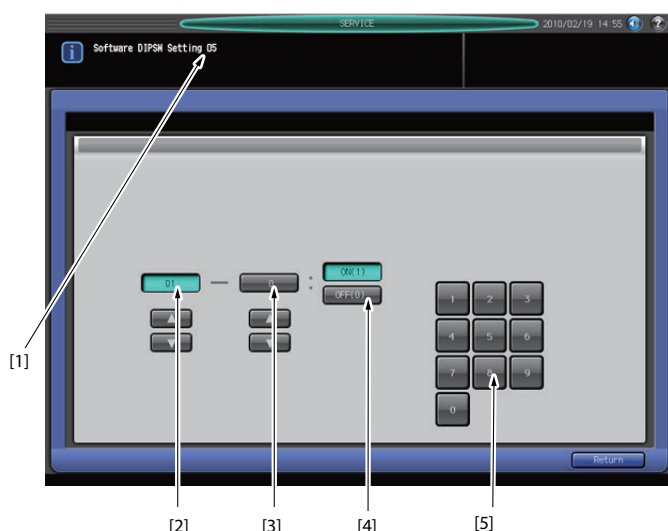

Note

- Do not change any switch not described in the service manual.

(2) Procedure

1. "Service Mode Menu screen"
Press [07 System Setting].
2. "Service Mode Menu screen"
Press [01 Software DIPSW Setting].
3. "Software switch setting mode screen"
Press [▲] / [▼] or numeric buttons after pressing the "DIPSW number" and "Bit number" buttons.
4. Press [On (1)] or [Off (0)] to set the selected bit number ON/OFF.

(3) Software DIPSW setting screen

[1]	DIPSW data (indicates the 8bit values of the selected DIPSW numbers in hexadecimal from 00 to FF.)	[2]	DIPSW number
[3]	Bit number (0 to 7)	[4]	Bit data: 1:ON, 0:OFF
[5]	Numeric buttons	[6]	-

5.9.2 Software DIPSW setting list

Note

- Do not change any bit not described on this table.

DIPSW	Bit	Function	Set value	Default setting		
				Japan	Inch	Metric
1	0	GP punch 1-position stapling (1250/1250P/1052 only) • Function: Normally, flat stapling is restricted for paper punched in GP-501. Release this restriction to enable only the 1-position stapling. • Usage: Set this setting to "1" to perform the flat stapling to paper punched in GP-501. Note • Depending on the type of die set, it is possible that a hole is made on the stapling section. In this case, setting to "1" causes a JAM.	• 0: Restrict • 1: Allow	0	0	0
	1	-	• 0: - • 1: -	0	0	0
	2	-	• 0: - • 1: -	0	0	0

	3			0	0	0
	4	Switch the Duplex path/Simplex path when the Duplex Print page has a Simplex print page. • Function: When this setting is set to "0", operates the Duplex path with inserting a blank image after the Simplex page for the Simplex page of the mixed Job of Simplex/Duplex. This setting switches the Duplex path/Simplex path for the Simplex print. • Usage: Set this setting to "1" to operate the Simplex page in the Simplex Mode for the mixed Job of Simplex/Duplex. Note Productivity is improved when there are too few Duplex Print Jobs in the mixed Job of Simplex/Duplex. • Productivity is not necessarily improved by changing this setting.	• 0: Duplex path • 1: Simplex path	0	0	0

DIPSW	Bit	Function	Set value	Default setting		
				Japan	Inch	Metric
	5	1 to N + Face Up/N to 1 + Face Down Print • Function: Switches the Face Setting in the 1 to N or N to 1 Mode of the Duplex Job. • Usage: When this setting is set to "1", prints 1 to N with Face Up and prints N to 1 with Face Down in the Duplex Job. Supports the case that the face set to the offline machine used by the users is different.	• 0: OFF (1 to N + Face Down/N to 1 + Face Up) • 1: ON (1 to N Face Up/N to 1 + Face Down)	0	0	0
	6	Switching the operation when the name of paper type is unregistered • Function: Set whether prints the job or not when the name of paper type is unregistered which is taken as the specified name Job from the driver. When this setting is set to "0", deletes the invalid job with no output. When this setting is set to "1", prints the job. However, selecting paper is based on the paper size not on other parameters (paper type, paper weight, punch hole, and color). • Usage: Conduct this switching to avoid the trouble that the name of paper type is unstable when a user prints the unregistered name Job with an Application which is not supported.	• 0: OFF • 1: ON	0	0	0
	7	HDD file list display order • Function: Set the order to display the file list in HDD. • Usage: Set this setting to "1" to display the file list in order of the latest register date.	• 0: OFF (in a regular order) (old to new) • 1: ON (in a reverse order) (new to old)	0	0	0
46	0	Drum Cleaning Condition Setting	• Top priority for blurred image prevention: 46-1=0, 46-0=0 • Priority for blurred image prevention: 46-1=0, 46-0=1 • Priority for preventing marks on drum: 46-1=1, 46-0=0 • Top priority for preventing marks on drum: 46-1=1, 46-0=1	1	1	1
	1	• Function: Change the amount of the PCC charge output value between image areas, and the cleaning brush theta. • Usage: Use this function when the marks on the drum or the blurred image occur due to the unintended environment of usage. Note • It is the trade-off between handling the marks on the drum and the blurred image. Check the condition to conduct the adjustment whether the set value is suitable since an excessive setting works negatively.		0	0	0
	2	System Settings for Drum Refresh Mode Create a black band on the drum to prevent the blurred image on the drum occurred on the charging corona after being left under high humidity environment. Delete the dirt of discharging with black band on the drum by scraping off with the cleaning brush. • Function : Sets the execution environment for the drum refresh mode that is performed automatically in specific conditions. • Usage : Use this setting when blurred image occurs on printing after the sub power switch (SW1) turns ON in specific conditions. Note • When changing this setting to "1", warm up time is extended by 30 seconds.	• 0: Conducted only under high humidity environment. • 1: Conducted under any environment.	0	0	0
	3	Operation Time Setting for Drum Refresh Mode • Function : Sets the operation time for the drum refresh mode. • Usage : Use this setting when blurred image still occurs on the image, if the drum refresh mode performed automatically under specific conditions.	• 0: 180 seconds • 1: 300 seconds	0	0	0

DIPSW	Bit	Function	Set value	Default setting		
				Japan	Inch	Metric
	4	Periodical Operation Setting for Drum Refresh Mode Removes paper dust on the drum by conducting the drum refresh mode periodically to prevent blurred image when feeding the paper with much paper dust. • Function : The main body stops the job every 3,000 prints and perform the drum refresh mode. • Usage : Use this setting when blurred image occurs during the continuous feeding of the paper with much paper dust. Note • When changing this setting to "1", the productivity tends to lower since conducting periodical drum refresh mode stops the job.	• 0: Disabled • 1: Enabled	0	0	0
	5	-	• 0: - • 1: -	0	0	0
